The Cornish Indians, as they will be called in the new Standard, also needs a little more attention. The classes at eastern shows have grown smaller each year during the past five years, and at some shows, where once upon a time a whole row of these magnificent fowls could be seen, not even a single specimen was represented in the past few years. In the days of Sharp, Bicknell, Sandacre, Taylor, Bowman, Babcock, and other eastern breeders of note, it was a grand sight to look over the Indian Game classes. The competition was keen, and there was much money expended for choice specimens. We were sorry to have Dr. Wolfe leave the ranks of Indian Game fanciers, but his successor, Mr. Thompson, bids fair to keep up the breed to a high standard in New Jersey. Mr. Kirby's return to the fancy is very welcome, and we may look for increased interest in Cornish Indians next season. It would be well to reorganize or rejuvenate the old Indian Game Club. The latter, years ago, was a powerful agent in bringing the Indian Game to the front. With proper illustrations in the New Standard to guide the breeder and judge of these fowls, there can be no excuse for tolerating the long-legged, peak faced apparitions that so frequently have won ribbons as Indian Games. If there is a really distinct type of a variety or breed, it is the Indian Game, and once that type is fixed in the mind of the breeder the mating and breeding of Cornish Indians will undergo a decided change for the better.

BROWN'S BUDGET

Are you closely studying the development of the chicks? Don't be discouraged with the first feathering of your Barred Rocks, or if their legs are not as yellow as you expected them to be. There will be something different later on.

Speaking about rough handling of eggs by express. I sent 68 eggs to Berryville, Va., and receiver reported "ten broken in bottom of basket, have had very rough handling." Later postal came saying: "Forty eight chicks had hatched from the fifty-eight eggs."—good for expressed eggs.

I have a belief that eggs should always be packed for shipment with the big end down. Many years ago I sent twenty-six eggs to Salisbury, England, packed that way, and nineteen hatched. I received from England forty eggs. Twenty were packed with big end down and twenty with little end down. From the two lots there were hatched fourteen and seven, respectively.

Some of the "has beens" are Pea Comb Barred Rocks, Partridge Cochins, Jersey Blues, etc. I. K. F. has a good many converts on the comb question of the breeds. There are "others" who believe that where new breeds come from single comb breeds, and have rose combs, that there is a good preponderance of outside influence in their production. Be it as it is, some of the rose comb varieties are both handsome and useful. Variety is the spice of life, even in the chicken business.

Incubator Chick: "Who are those chicks over the fence there that trail around after that cross old hen." Other Incubator Chick: "They are a henpecked lot that don't know what freedom is, yet they claim to belong to a certain set." "Well, what are they yelping about." "Why, their mother insists on taking a constitutional when they are shivering with the cold." "I declare this wind is real raw this morning lets go in the brooder awhile."

Take condensed milk cans, and cut them down to two inches, then tap the cut edge with the hammer and the sharp edges will turn down. Mash the turned edges flat and there are no sharp edges. With three nails in proper position fasten the vessel on a small piece of square board, and you will have a good drinking vessel for young chicks that can not tip over.

Mr. Billups says: "I've heerd about protein being great for chicks and all kinds of stock, but I can't find any one that's got any of the seed to sell. Bill Tomsin says its a hot climate plant and won't come from seed, but Bill is allus jokin', so a feller can't believe him nohow."

Preserving eggs in water glass (sodium silicate) is becoming quite an industry and a formidable rival of cold storage. Eggs from hens not running with male birds are preferable when eggs are to be saved any length of time by any process or method. When packing away eggs be sure to use only fresh ones, and they should be gathered from the nest several times during the day.

The Anconas when well bred are very handsome fowls. They are excellent layers. Their disappearance from the shows is to be regretted. A friend writes: "There are many breeds that have stood the test of time and proved their value that are relegated to obscurity by the craze and great amount of booming of new untried breeds." The Anconas may have suffered on this account. There is plenty of room, and there would doubtless be a paying demand for all of the pure breeds if they were shown at the prominent poultry exhibitions.

An exchange says that the Rhode Island Experiment Station reports that much of the mortality of brooder chicks is due to inclement weather, which induces lung and bowel diseases. It is claimed the temperature should be evenly maintained, not allowed to fall below sixty degrees nor go above ninety. If out-door brooders in severe weather, during undue changes of temperature, are allowed to become the same temperature as outside, the chicks are subjected to lung diseases, from which they never recover. Pneumonia, tuberculosis, congestion of the lungs and diarrhoea are among the common forms of trouble.

Ed Blair, of Cadmus, Kans., known locally as "the melodious poet of the Osage," has written the following lines on the hen:

Cackle, cackle, Plymouth Rocks,
Ye can have the wagon box,
'N' the smokehouse, 'n' the barn,
Take 'em—we don't care a darn.

Cackle here and cackle there,
Lay your eggs just anywhere;
Every time ye lay an egg,
Down the mortgage goes a peg.

Cackle, cackle, all the day,
Who kin find a better way
Fer to git ahead again
Than to cultivate the hen?

Ducklings as poultry dainties seem to be much more popular in some cities than others. Some cities can hardly secure enough to fill the demand, while in other cities, equally as large, there is comparatively no demand for ducklings. Why is it?

Some farmers decry pure bred poultry, and say they are "fancy," "new-fangled," etc., and yet they will boast of the laying qualities of a hen or two they own that are half-bred Leghorn or Plymouth Rocks. Why?

Mr. Billups was enquiring of Bill Tomsin what he considered as indispensable accessories in poultry raising. Tomsin said: "Billups, I ain't claiming to know all of 'em, but I seed your fowls yis'ti'day when I got the cabbage plants, and tuk a peep in thir chicken house, and in your case I reckon the indispensables would be a whitewash brush, a barrel of coal oil, shovel, hoe, a good stiff broom and four gallons of insect powder." Billups simply answered, "Yep, I guess so."

A fancier who, like Prof. Garner, is studying animal languages, but has turned his attention strictly to researches in poultry languages, declares he recently heard two sedate biddies indulge in the following hen talk: Mrs. Cackleton—"I see Mrs. Clucksy is becoming a great society hen." Mrs. Plimrock—"So I understand. Instead of being domestic and sticking to our set, she is willing to let her offspring grow up with the artificial orphans, and she spends her time flirting socially." Mrs. Cackleton—"Yes, and there is old Bill Rooster flirting with three of his own daughters. Scandalous! What is this chicken world coming to?"

GOLDEN WYANDOTTE.

ODDS & ENDS

Mr. Geo. Howell's pen won first place in the Australian egg laying contest. These fowls were grown in New South Wales. The same man beat all Australian competitors a year ago in the six months winter test.

Mrs. Hansel's Rose Comb Brown Leghorns won a monthly prize for highest egg yield (113). Her pen was the leader for average. There was but the one pen of this variety, and their yearly average was 178 eggs. They were sent over from America to compete. We trust her hens will win first next time.

The average egg yield of the entire lot of the six hundred hens competing was 152 eggs each, eleven less than last year. This is a fine showing, as the year was not considered a good one in weather conditions, as there was too much hot, dry weather. These three yearly contests were conducted under the patronage of The Daily Telegraph, a newspaper at Sidney.

General Booth, the founder of the Salvation Army, is credited with having the largest poultry yards in England. Out of 104 birds shown from his yards 93 won prizes.

White Leghorns are in the lead at the Queensland competition. Buff Orpington Ducks lead in the duck laying contest. White Leghorns lead in the South Australian egg contest, all from Australia. American Reds are in the lead in the Kansas egg producing contest.

For general average the Indian Runner Ducks lead in the Australian egg competition. They hold second, third, fourth, fifth, sixth, and seventh places, nineteen pens competing.

The new fowl of Ireland, "Hibernia," has a topknot and is bred in many colors. From their description they would seem to be largely Faverolle.

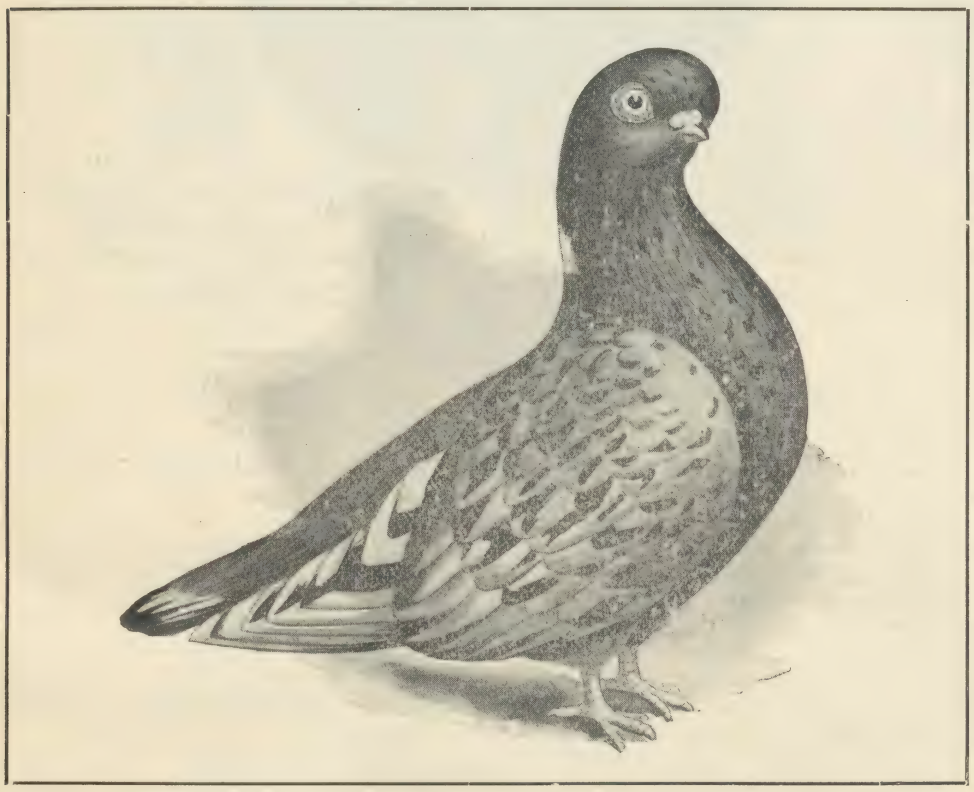
Dr. A. W. Bell, of Toronto, is hard at work for the success of the national exhibition that will be held in that city in September.

Corydon, Kentucky, is becoming quite a poultry center. The Item states that in the near future the farmer in Henderson County may look to the egg crop to rival tobacco as a tax payer.

Notice.

We have a number of applications for Runts, Giant Homers, hen pigeons and other large varieties for squab breeding. We think that it will be to the interest of those who have them for sale to advertise them in our columns.

PIGEONS



Accommodations for Pigeons.

Pigeons can be bred and raised almost anywhere that shelter can be provided, and they sometimes do with very little shelter; in fact, I have seen them make a home in a common soap box nailed to the side of a barn, where they seemed as happy and contented as in more luxurious quarters. The flocks I have in mind were quite numerous and were accommodated with shelter by nailing a variety of small boxes to the gable end of a barn; here they raised their young, and I have seen squealers in the nest with the snow all about the sides of the boxes, and the mystery was that they had not frozen to death; but they seemed fat and hearty, and there was no question raised as to their hardiness. Such a life must naturally produce a hardy race, but would not likely prove successful with the majority of high-class and Toy Pigeons. But while they may succeed with limited and unpretending quarters, still acommodations that allow of their being well cared for, and in which they can be visited with comfort and pleasure, are without doubt the most satisfactory to the breeder and fancier.

These accommodations can be suited to the space available by the fancier. It may be a box nailed against the gable end of the house or barn; it may be a limited space in the peak of the same; it may be a larger room in that house or barn, or it may be a commodious building erected for the purpose in the rear of the home lot. Wherever your fancy dictates or your means will allow, there can your pigeons find a home. They are not fastidious, no pride governs their choice, and they build, breed, and raise their little families as happily and contentedly in a rough box as in the most conveniently and comfortably arranged aviary.

Almond Tumbler Cock.

Though this is a most popular variety of the Short-faced Tumbler, even the breeders have little pleasure in raising them on account of the diversity of opinion as regards the color. "The same color as the shell of the almond," but how many different-colored almonds are there? The ground-color should be in tint like the inside shell of the almond; the head, neck, chest, back, and wing-coverts, spangled with rich black; tail and flights, showing three distinct colors—almond, black, and white in uneven patches. They are erect and jaunty, with head large and round, well thrown back; neck, short, arched, broad at base, but very slender at throat; chest, broad, prominent; wing-coverts, spreading; back, slightly raised; beak, short, straight, horn-colored; cere and wattles, small and fine; the flights, carried below the tail but no opening between the two; the eye large, round and very prominent, set well back in the head, silvery, bright, with jet-black, well-defined pupil.

ALMOND TUMBLER COCK.

Perches in Flights.

Perches in flights should be arranged in convenient positions in accordance with the requirements of each variety. Care being taken that they do not intercept each other—like so many telephone wires—in all directions, and thereby prevent that freedom of movement which is so conductive to the well-being of pigeons generally.

As a rule, the most suitable perch for the area or flight is a long narrow rail, about three-fourths of an inch thick and three inches wide. Perches of this simple kind may be fixed on brackets of wood or iron, around the flight at various distances and heights in accordance with the exigencies of the situation.

Pigeon Notes.

The Tumbler Club, meeting at Chicago, mustered about five hundred birds. It seems rather astonishing to think that five hundred of a single variety of pigeons will be entered at a show of this kind. We remember many years ago when the Cincinnati show compelled every exhibitor to furnish his own coops for pigeons and pet stock. What would the pigeon fanciers think of such proceedings today?

The pigeon fanciers of the West are making an effort to have the Chicago show rival the great Boston and New York displays. There is no reason why Chicago should not have a great pigeon show, and as soon as they will get together and have but one show in this great Western city, instead of trying to hold two, they will do well.

The many pigeon clubs are continually having controversies. Last year the Owl clubs, now the Jacobin breeders and the Fantail people are always having something up their sleeves. This is thought to be bad, but it seems to be good for the pigeon men. The more controversies they have the more sociable they are at their club gatherings.

We remember at St. Louis, when the Pigeon Club was to meet, somebody took down one sign and put up another, changing the date of the meeting. A few of the enthusiastic members were going to clean up the whole pigeon business then and there; but in about thirty minutes they were all together, gathered around tables just as peaceful as turtle doves. The excitement seems to be good for the business.

Fantails are beginning to be almost as numerous in kind and character as are Turbits and Tumblers. Many of the new varieties are most attractive, and the old stand-bys are so much better than ever before as to keep up the interest in their line and colors as well as any others. When we were at New York, we were told that some of the Jacobins shown there were the greatest that ever happened. The blues, and the reds, and the whites, and the blacks—in fact, every single one of the Jacobin enthusiasts thought that the one peculiar color that he liked was the best. That is what makes the large classes of beautiful birds at the Eastern shows.

One Bardroff, of Pigmy-pouter fame, who wheels about Washington as if going to a fire, has not yet recovered from his ill feeling at the way the express companies handle stock to and from the shows. Whenever a bird dies or is killed en route, there is a great hurrah raised and considerable talk, but there it ends. Why don't all the pigeon fanciers club together once and go after the express companies on one of these charges. As long as it is all talk and nothing done, the express companies will not improve their service.

The most certain cause of failure in a pigeon loft is careless management, impure water to drink, lack of grit, the feeding of new or bad grain, insufficient water supply, cold and lice. If any of these conditions are in your loft, look out for dead squabs.

DATES CLAIMED.

August 22 to 25.—Cortland, N. Y. W. J. Greenman, Secretary.
August 29 to September 1.—Ballston Lake, N. Y. Saratoga County Agricultural Society. N. V. Witbeck, Secretary.
September 2 to 9.—Toronto, Canada. Canadian Exposition. A. W. Bell, Superintendent.
September 4 to 7.—Johnstown, N. Y. Fulton County Agricultural Society. Drevenstedt and Zimmer, judges.
September 11 to 16.—Syracuse, N. Y. New York State Fair. S. C. Shaver, Secretary.
September 26 to 29.—Poughkeepsie, N. Y. Dutchess County Agricultural Society. Zimmer and Drevenstedt, judges. J. M. Booth, Secretary.
October 10 to 13.—Hagerstown, Md. J. Frank Spohr, Superintendent.
October 17 to 21.—Atlanta, Ga. Georgia State Fair and Atlanta Poultry Association. Drevenstedt, judge. Frank Weldon, Secretary.
November 20 to 25.—Gloversville, N. Y. Fulton County Poultry Society. Stanton, Zimmer, and Drevenstedt, judges. Jacob N. Blunck, Secretary.
November 30 to December 2.—Danbury, Conn. Nichols, Drevenstedt, and Card, judges. C. H. Brundage, Secretary.
December 5 to 8.—Walden, N. Y. Drevenstedt, judge. H. W. Millspaugh, Secretary.
December 6 to 13.—Charleston, S. C. J. McCarthy, Secretary.
December 6 to 8.—Paterson, N. J. Jas. Handford, Secretary.
December 5 to 9.—Providence, R. I. W. J. Brown, Secretary.
December 5 to 9.—Wilkesbarre, Pa. D. T. Miller, Secetary.
December 12 to 15.—Monroe, N. C. Marshall, judge. T. F. Dillon, Secretary.
December 13 to 16.—Blondon, Pa. E. G. Wilkinson, Secretary.
December 15 to 15.—Kingston, N. Y. Drevenstedt, judge. F. E. Miller, Secretary.
December 18 to 23.—Hazleton, Pa. J. E. Anderson, Secretary.
December 25 to 30.—Mankato, Minn. Holden, judge. J. W. Kallmann, Secretary.
December 26 to 29.—Meriden, Conn. Drevenstedt, judge. W. H. Baldwin, Secretary.
December 27 to January 1.—Tacoma, Wash. Collier and Dixon, judges. Mrs. C. A. Pratt, Secretary.
December 29 to January 2.—Toronto, Canada. R. Durston, Secretary.
January 2 to 6.—New York. H. V. Crawford, Montclair, N. J., Secretary.
January 8 to 12.—Augusta, Ga. J. W. Killingsworth, Secretary.
January 9 to 14.—Dallas, Texas. Loring Brown, Kuebel, and Purdy, judges. ————, Secretary.
January 8 to 14.—Los Angeles. Mrs. O. K. Burbridge, Secretary.
January 9 to 12.—Middletown, Conn. W. J. Keift, Secretary.
January 15 to 20.—Delevan, Wis. Tucker and Rigg, judges. W. E. Peffer, Secretary.
January 24 to 26.—Pittsfield, Mass. R. T. Kent, Secretary.

Squabs are raised in one month, bring big prices. Money makers for poultrymen, farmers, women. Send for our **Free Book** and learn this immensely rich industry. 83

PLYMOUTH ROCK SQUAB CO.,

The Homing Pigeon.

The Latest Book on Homing Pigeons.

The demand for a perfectly reliable and practical book on the "feathered race-horse," has prompted us to publish our new book, "The Homing Pigeon." This book is 16mo in size, printed on excellent paper, and completely illustrated from cover to cover. It is a complete book in every way, and treats thoroughly on the history of the Homing Pigeon, breeding, training, and flying, as well as the many handy and business uses for which these birds may be used. It is fascinating to breed Homing Pigeons, besides being a most practical study. Every detail is told in this book in a clear, concise, and explanatory manner; and the various writers herein have given us a mine of information. The reader is taught all about the selection of good breeders, the breeding of youngsters for racing qualities, training them to the best advantage; also the rules and conditions for flying birds in races, as well as for business purposes. It is a complete book in every way. Lovers of the Homing Pigeon can not well do without a copy of this excellent little book. **Price, 25 Cents.**

GEO. E. HOWARD,

CLASSIFIED ADS

Notice.—No every other week or once a month contracts for classified advertisements will be accepted. See editorial page for classified ad rates.

PLYMOUTH ROCKS.

Chance of a Life Time. Millville Poultry Farm Company will discontinue breeding poultry for show purposes, and in future will devote its entire capacity to producing chickens and ducks for market. We will sell you any prize winner or breeding bird in our possession for 50 per cent of its true worth. This sale includes all our winners at St. Louis, New York, Boston, and at other leading shows, as well as cream of stock bred from these winners. This sale positively closes July 10th. Any old birds remaining unsold at that time will be carried over until October, when we will hold a sale of cream of our 1905 hatched youngsters, and balance of old stock. Eggs from all prize matings half price during June. Broiler eggs $6.00 per 100; $50.00 per 1,000 during June. Positively no shipments made between July 10th and October 10th, as Mr. Delano closes his connection with our farm on July 10th, but will return October 10th to conduct a sale for one month in the fall. Orders booked for October delivery at any time. Prompt buyers will procure the plums. Prices quoted on single birds, pairs, pen, or entire flocks of any one variety. We offer you the best in America in Barred, Buff and White Plymouth Rocks, Buff and White Wyandottes, and Pekin Ducks, and at prices you will pay. MILLVILLE POULTRY FARM CO., Maurice F. Delano, President, Millville, N. J. 22-tf

Corey's Buff Rocks Again Victorious! At Hartford, Conn., 1905, 1st and 3d cocks, 2d and 4th hens. 2d pullet, color special. Keene, N. H., 1905, 1st cock, 1st hen, 1st pullet, cup for best display. 1905 mating list now ready. M. J. COREY, 900 Sumner Ave., Springfield, Mass.

Buff Rocks Exclusively.—We Have Mated Up for this season's breeding our best birds selected from our Auburn winners, nice, rich, even buff, and will book a few egg orders at $2.50 per 15. See Fancier for Auburn awards. STEPHEN WESTLAKE, 17 Union St., Auburn, N. Y. 96-47

White Rocks.—A Clean Sweep at Great N. Y. State show, my stock winning 5 firsts, 1 second out of a possible 6 firsts. All firsts at big Cortland show. If you want good stock at honest prices write to L. S. HARRINGTON, 162 Homer Ave., Cortland, N. Y. 578tf

Sound Beach Poultry Yds. Breed Blue Barred Rocks that never fail to win. At Stamford in class of 43 singles, we won 2 silver cups and 4 other specials. We can please you in stock and prices. Egg orders booked now. Circular free. SOUND BEACH POUL. YDS., Sound Beach, Conn. 89-40

White Plymouth Rocks.—America's Best. Their winnings at the late Hagerstown show sufficient proof. 1st, 3d and 4th cockerel, 2d, 3d and 4th pullet on 10 entries. Grand lot pure white cockerels for sale. Eggs, $3 a setting; 2 settings, $5. W. H. OVERBAUGH, Hanover, Pa. 89-14

Buff Rocks.—Winners at Herald Square, N. Y., Harrisburg, Sanatoga and Williams Grove, Pa. 17 entries and 16 prizes. (How's that?) Eggs, special pens, $1 per 13; incubator eggs, $5 per 100. Member Buff Rock Club. Circular free. Box 20. MRS. BERTHA M. KERLIN, Douglassville, Pa. 88-39

Victor Strain Barred Rocks Have Won 34 Regular and special prizes this season at Danbury Fair. Wm. Conn., Stamford and Hartford. 4 grand matings now ready to raise more winners from. Eggs, $3 per 13. BRUNDAGE & DODDS, R. F. D. No. 20, Danbury, Conn. 82-33

Edgewood Farm Buff Rocks.—World's Fair Winners. 1st cock, class 56; 2d pullet, class 111; 6th ckl., class 73; 7th pen, class 38. More prizes New York state fair, 1904, than 13 other exhibitors combined who showed in competition. Cocks, ckls., pullets for sale from 1st prize World's Fair cock. EDGEWOOD FARM, Ballston Lake, N.Y. 88tf

Buff Rocks.—The "Pure Nuggets," the Greatest prize winning strain in the world. Have added the entire Overbaugh flock. Birds from our yards in the hands of customers won at St. Louis, the largest and strongest class ever exhibited. They also have won 1-2-3 and silver cup prizes this past season at the large shows. Eggs, $5 per 13. Send for catalogue. C. L. PENSYL, Bloomsburg, Pa. 96-47

Buff Rocks of the Proper Shape, Size and Rich, even buff so hard to get. The reputation built up by my strain of Buffs is founded on square and honest dealings. We appreciate any favors shown us by giving value for money received. R. M. TRATE, Pottstown, Pa. 89-40

Rocks—Buff, Barred and White.—Choice Stock. Eggs, $1 per 13; $5, 100. KURTZ, Sanatoga, Pa. 00-tf

Barred Rocks.—14 Grand Matings, 7 for ckls., 7 for pullets; Madison Square winners in both matings. Birds scored at 1905 show, by leading judges, from 93½ to 95½ for females. Eggs, $3 straight, per setting. C. H. SHAYLOR, Lee, Mass. 94-45

Blue Barred Plymouth Rocks, Exclusively Bradley Brothers' strain, double matings, prize winners. We aim to please our customers. Eggs from choicest matings, $3 for 15; $5 for 30. 60 per cent hatch guaranteed or duplicated at half price. Incubator eggs, $5 per 100. S. D. YORK, Deposit, Broome Co., N. Y. 52tf

White Plymouth Rocks.—Fishel's Are the Best in the world, winning more prizes at World's Fair than any other two White Rock Exhibitors. My new 48-page catalogue is the finest poultry catalogue ever issued. Send three 2-cent stamps for a copy. 5,000 birds to sell. Address U. R. FISHEL, Box D, Hope, Ind. 532tf

Buff Plymouth Rocks.—Three Pens Headed by three grand males. Winners of 15 firsts, 6 seconds, 3 thirds and 11 specials. You are sure to get winners from these matings. Eggs, $2. A. E. RAYMOND, Erie, Pa. 80-tf

Pure Grave's White Rocks.—Eggs, $3 per Setting. Stock in season. DR. T. Z. JONES, Waterville, N. Y. 99-11

Ridgley's Barred Plymouth Rocks Won at the great Herald Square Show, New York, 1st hen; 2d, 3d, 4th pullets; 4th pen. At Madison Square Garden, 4th cock, 2d hen, 4th pullet. We were one of only two who got a place on pullets. Eggs, $3 per 13. JOSEPH PHIPPS, Manager, Towson, Md. 01-52

Buff P. Rocks.—Eight Males, Winning 1sts at recent shows, heading yards. Eggs, 13 for $3. Express paid on two or more sittings. C. C. SPARKS, Swanton, N. J. 01-13

Eggs for Hatching from Some of Those Waldin cup winners. Most number points in show. Barred, White, and Buff P. Rocks. $1.50 per 13, straight. FRED WOODRUFF, Florida, N.Y. 93-tf

Eddy's Buff Rocks Exclusively.—I Have Three hundred breeders mated for best results. Extra good layers. Eggs, special mating, three dollars per thirteen; regular $2 layers, $1. Discount on large orders. THE POPLARS, D. B. Eddy, Prop., Somerset, Mass. 94-tf

Golden Hill Poultry Yards.—Buff Rocks Exclusively. Champions of Conn., 1905; won State cup, two other silver cups, and ten specials at State show, Middletown, Jan. 10, 1905. A few choice cockerels for sale. Eggs from best matings, $5 per 15. WILSON & HALL, Danbury, Conn. 93-34

Blue Barred Farm Barred Plymouth Rocks Are winners, winning over fifty prizes the past year in hot competition. Nine grand pens mated for this year; Bradley Bros.' strain—pure. My circular and mating list is worth sending for. Eggs, $2 per 13. BLUE BARRED FARM, F. H. Castner, Prop., Box 6, Changewater, N. J. 27-78

Bouck's Barred Rocks.—Record Breakers. Auburn, 5 firsts, 6 seconds, all specials, and silver cup for best exhibit any one variety. Schenectady, class of 106, 4 firsts, 12 minor prizes, 5 specials, including silver cup best display. Best eggs, $3 per 15; $5 per 30. Incubator eggs, $5 per 100. ARTHUR G. BOUCK, Frankfort, N. Y. 52tf

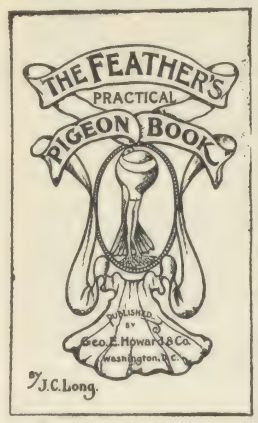
POCKET-MONEY POULTRY.



The fourth book of The Feather's series is Myra V. Norys' latest production, "Pocket-Money Poultry." The experienced poultryman will read this book with both pleasure and profit. There are none so old and experienced but that have still much to learn. Perfection in this, as in other occupations, is hard to attain, and those who are doing the best still find room for improvement.

"Pocket-Money Poultry" has the following interesting chapters: How much Capital? Choosing a Line of Work, The Breed that Wins, Artificial and Natural Incubation, Satisfactory Coops and Brooders, Mothering Chicks, The First Season's Work, The First Season With Fancy Poultry, Confinement or Freedom, The First Poultry-House, Feeding for Eggs, The Embryo Chick at Testing Time, Ducks and Geese, Turkeys for Pocket-Money, Squabs for Pocket-Money, Pocket-Money Possibilities, Pocket-Money Pointers, etc. Price, 50c.

GEO. E. HOWARD.

714 12th St. N. W., Washington, D. C.

The Feather's Practical Pigeon Book.

"The Feather's Practical Pigeon Book," by J. C. Long, is just from the press. It is superbly printed on calendered paper, and illustrated with a half-hundred fine half-tones. The cover is of heavy material, printed in colors. It is just the kind of book that will be read and appreciated by the masses. This book is credited with being the best and most practical book published on breeding and raising all kinds of pigeons. Those who have seen it can not speak too well of it, and it will undoubtedly prove the text-book of the country on pigeon culture. No library or home of a pigeon fancier is complete without it. The illustrations are said to be the finest and most accurate ever drawn, and I do not hesitate to return the money to all who are not satisfied with it. Price 50 cents, postpaid.

GEO. E. HOWARD,

714 12th St. N. W., Wash., D. C.

MONEY IN SQUABS.

The most interesting and the only practical book published on raising squabs for market, is my book entitled "Money in Squabs." This book has had a most generous sale during the past years, and contains the following:

Introductory, Breeding Houses, Breeding Stock, Distinguishing Sex, Food and Feeding, Water, Salt, Nesting Material, Manure, Breeding and Management, Dressing Squabs for Market, Shipping and Selling, Diseases of Pigeons—Canker, Cholera, Egg Bound Enteritis, Going Light, Roup, Small Pox, Sudden Colds, Wing Disease, Worms—and Douglas Mixture. Some of the illustrations are: Full-page drawings of Homers, Runts, Dragoons, and Duchesse Pigeons, Plans of Single, Double, and Continuous Houses for Breeding Squabs, Arrangement of Aviaries to a Garret Room and to a Barn, Plans for Building a House in the Back Yard, Plans of Nests, Perches, Mating-Boxes, Bath-Tubs, Drinking-Fountains, etc. Price 50c.

GEO. E. HOWARD,

Standard Cyphers Incubators

Improved in Pattern. Reduced in Price.

A Saving To You of 12½ to 20 per cent.

Now, right now, is the time to take advantage of the **Cyphers Incubator Company's new policy.** By re-organizing our business, installing labor-saving machinery, buying in immense quantities and greatly increasing our output, we have been able to largely reduce the **"cost of manufacture." Our 1905 policy** is to give this saving to our customers in the form of low prices.

SAMPLE SOLID FACTS: Fact One—Cyphers Incubators are used on **more Government Experiment Farms** in the United States, Canada and other English-speaking countries **than all other makes of incubators combined. Fact Two**—Cyphers Incubators are used on **more large** and **successful poultry plants than all other makes of incubators combined. Fact Three**—Cyphers Incubators are used successfully by **more breeders** of **exhibition fowls than all other incubators combined.**

Remember that **Cyphers means certainty.** New and valuable patterns have been added to the 1905 line and former styles have been much improved. **Consult our 1905 catalogue for the strongest guaranty** ever put out by an incubator company.

Investigate our **two low-priced incubators, Farm-Economy,** 100-egg capacity, $10.00; **Boy's Choice,** 50-egg capacity, $6.50. These are practical hatchers that will do good work.

FIVE STYLES OF BROODERS to suit the conditions of every poultry raiser. Find out about the Hare-Curtis Hygienic Brooder. **It will save the lives of your chicks.**

The Cyphers Company is today the **world's headquarters** for money-saving, money-making **Poultry Specialties.** We now manufacture in our own factory, mills and laboratory **more than 70 useful articles,** all necessary for the poultry raisers' best success. We know exactly what these articles are made of and they are fully guaranteed. **Cyphers Chick Food,** special laying foods, clover products, lice killers, roup cure, disinfectants and appliances of all kinds.

Send for our 1905 Catalogue—largest and finest poultry catalogue ever issued; 228 pages 8x11; six special chapters on profitable poultry keeping. Over 450 illustrations, including portraits of 150 best known authors, judges, fanciers and owners of the world's most successful poultry plants, together with prices on everything you need to make your poultry pay. **Sent free** to you if you enclose names and addresses of two friends interested in good poultry. Mention this paper and address nearest office.

You will note the cut above. It has real worth and merit, and is not only useful, but an actual necessity and for which there is good demand. The poultry business is not going to become, but has already become one of the greatest industries in the land. I have an invention that is abreast of the times. It saves time, and work, and waste of feed in poultry raising. It is a device that all poultry raisers need, can use and will want if once seen.

THE HOMING PIGEON.

The demand for a perfectly reliable and practical book on the "feathered racehorse," has prompted me to publish my new book, "The Homing Pigeon." This book is 16mo. in size, printed on excellent paper, and completely illustrated from cover to cover It is a complete book in every way, and treats thoroughly on the history of the Homing Pigeon, breeding, training, and flying, as well as the many handy and business uses for which these birds may be used. It is fascinating to breed Homing Pigeons, besides being a most practical study. Every detail is told in this book in a clear, concise, and explanatory manner; and the various writers therein have given us a mine of information. The reader is taught all about the selection of good breeders, the breeding of youngsters for racing qualities, training them to the best advantage; also the rules and conditions for flying birds in races, as well as for business purposes. Price, 25 cents.

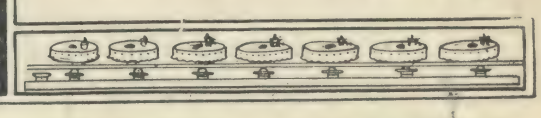
J. L. PURPLE

tf COLUMBIA, PA.

A Paper Incubator.



150 Egg Capacity.
Weight, 80 Pounds.

HENS SECRET DISCOVERED

This Incubator is a Wonder and the Leader of All Incubators.
Does not require an expert to get a successful hatch.

Made of Paper—the World's best-known Non-Conductor.
As strong and durable as wood.

TESTED. SUCCESSFUL. PRACTICAL. GUARANTEED.

Will heat up in any outside shed in zero weather in one hour, and will use from 50 to 75 per cent less oil than any other incubator on the market.

No even temperature necessary; any temperature between 95° and 106°, like the hen's, will secure a 90 to 100 per cent hatch of fertile eggs.

Our Regulator is fons of air and an even heat not necerrary.

Our Brooders—on the market for the past seven years—have demonstrated to the most exacting that they can raise in them 95 to 100 per cent of chicks.

Chicks Grow Fast and Are Strong and Healthy.

OLD KENTUCKY HEN RANCH
Perpetual Hen Co.
Please find $41.00, for which ship us one more incubator and brooder. The above is self explaining what we think of the natural hen and incubator and brooders. A. J. Asher, Jr.
All other brooders have failed for this man; he bought our fixtures and now raises almost all.

A BROILER FARM IN MICHIGAN
St. Joseph, Mich., Oct. 1, '04.
Jno. M. Sontag.
A Mr. Cox, here, a broiler man, says that your brooder is the best, and he knows, as he is old timer. Inclosed find $15.00, for which send me two sets of fixtures at once, and oblige,
Mrs. K. E. Dunham.

Send stamp for "1905 Price List and Customers' Reports," or 15c. in stamps or money for a 96-page catalogue, "The Hen's Secrets and Nature's Laws."

Young's Strain S. C. W. Leghorns

I Have No Other Breeds

My strain, again for the 5th consecutive year, shows its superiority by winning more prizes at Madison Square Garden, New York, than all others combined, including cup, medal and four specials. Two weeks later I showed at Boston against the most prominent breeders of the East, winning nine prizes on nine entries over birds that won 1st at St. Louis.

I showed 2 Cocks, won 1st, 2d; I showed 2 Hens, won 1st, 2d
I showed 2 Ckrls., won 1st, 2d; I showed 2 P'l'ts, won 1st, 2d
I showed 1 Breeding Pen, won 1st

Also four specials. This record has never been equaled by any other breed or breeder in America. Stock for sale at all times. Eggs $3.00 per 15; $15.00 per 100. Address 44

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV | Washington, D. C., June 10, 1905 | No. 611

THE ORPINGTON FOWL

BY W. L. DAVIS

During the past three years, and especially at the present time, there is such a demand for the Orpingtons, there remains no doubt that, of all of the different breeds of domestic fowl kept here in this country, none are being taken up with such enthusiasm by the general public and the best breeders throughout the country as are the Orpingtons. This may appear to be a big statement, but when you take into consideration that at our national show, held at Madison Square Garden, New York, the Orpingtons were the third largest class in the whole show, it is convincing proof in itself that the Orpingtons deserve what is being said and claimed for them.

To a breeder devoting his lines to the fancy they cannot be any better breed for him to take up as the Orpingtons of today are demanding, and the best prices are being paid for them of any variety I happen to know of. I have bred Light Brahmas, Games, Barred Rocks, Leghorns and the Orpingtons, and for egg production I found the Orpingtons the finest layers. In 1903 I had seven yards of Barred Rocks and seven yards of S. C. Buff Orpingtons under the same roof, exactly the same size runs, fed by the same party and fed the same way and with the same kind of feed, and the Orpingtons outlayed the Barred Rocks at least 50 per cent. I must have had an extra good laying strain of Orpingtons and a very poor strain of Barred Rocks to make this difference, but such was the case, and my Barred Rocks were all descendants and in some instances were New York winners. They were produced by some of the best Barred Rock Breeders in this country.

The three most popular varieties are the S. C. Buffs, Blacks and Whites. The standard weight of the Orpington today is one-half pound more than the Barred Rocks or Wyandottes. To the market man and utility breeder they should appeal strongly. In the first place they lay a beautiful brown egg, of a very heavy weight and one that commands a ready sale in our best markets, and for meat production—they are an early maturing fowl, and in my experience walking right away in size as a broiler from the Barred Rock or Wyandotte, and have a beautiful, white, juicy meat. I have heard some breeders make objection to them on account of their white flesh, but I have had a great many of our off-colored birds here and they cannot help but please the people, at the plant killed and have given them to hotel managers and market men, etc., and in each instance I have had them either write me or call me on the telephone asking if I could supply them with that kind of killing stock. In no case of my market experience have I ever had an Orpington turned down as regards having white meat, but on the other hand I find it an advantage.

The Orpingtons are the finest winter layers, and the eggs average a good size as they are brown shelled. The females are the best of setters and most careful mothers, and for table purposes the Orpingtons grow well and flesh quickly, being of a docile nature, a point that it owes to the Cochin and Dorking blood. Their whiteness of legs and skin render these varieties first-class market fowl, as they can be most satisfactorily dressed. They are the best of foragers and for a medium size. The females should be good, even color, with no white in hackle, flights or tail and should show us much buff under color as possible, especially in young birds there should be no mealiness in feathers nor mixed colors and the shaft of the feather should be the same color as the rest, and they should have small combs firmly set on, evenly serrated and free from side springs. Dark cocks and hens produce the best pullets and lighter cocks and hens produce the best cockerels.

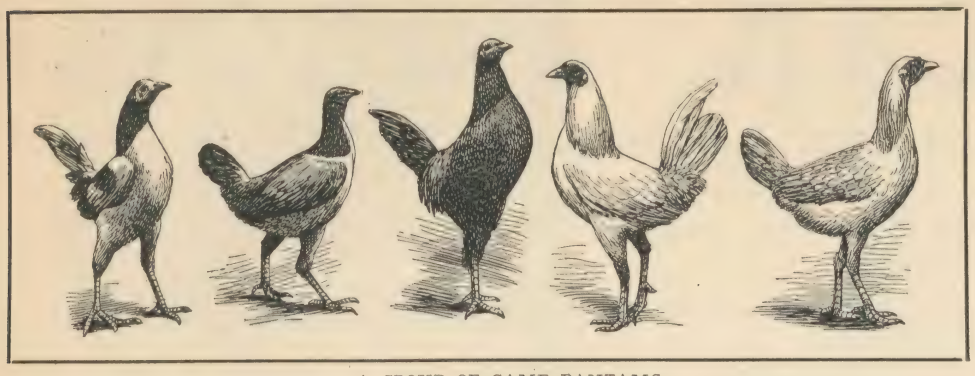
The breeding of blacks and whites, is, of course, easier, as they breed so true. In

weight breed are of the very best for small places and for one that desires a good all-around breed that possess all that is needed.

In the breeding of the Orpingtons the blacks and whites breed very true, the buffs have more or less disqualified specimens, as do the majority of all our artificial colored birds.

In the breeding and mating of the buffs the main points to be kept in view are—First, color and plumage; second. clean white legs, and third, the make and shape, and it is necessary to carefully choose a male bird of sound, even color, a little darker than exhibition color. He should be buff to the skin and as free from white as possible, nor must he show any white tips on his feathers. His breast color should be very nearly the same as his hackle, back and saddle; he should be free from smut in under color and have as little black in flights and tail as possible. He should stand on short stout legs and show a massive body and short back. His comb should be well set and medium breeding these two varieties, if one will keep in their original breeding lines and each year buying a little new blood, they will have no trouble in breeding both the blacks and whites.

The blacks were the original Orpington and they were first shown at the Dairy Show, London, in 1886, and the blacks in the show pen create the most favorable impression wherever they were shown. It is stated upon good authority that the blacks were obtained by mating large-bodied Minorca cocks with Black Plymouth Rocks; that is, shorts that came from Barred Rock matings, and the offspring from this mating were mated with clean shanked, short-legged Langsham cock and the desired type was gradually obtained. At the present time the Black Orpingtons are in great demand, and good prices are being obtained for the best specimens.



The buffs were second on the list, and it is said that they were first shown at the Dairy show in 1894. It is plain that they were produced by mating a large Gold Spangled Hamburg cock with colored Dorking hens and the progeny mated with Buff Cochin cocks. The buffs at the present time are the most popular of the three varieties.

The third variety that were produced were the White Orpingtons, and they appeared in England sometime in 1889. They are claimed to be the outcome of mating White Leghorn cocks with Black Hamburgs and crossing the offspring with the White Dorking. Mr. Godfrey Shaw, of England, brought out the Albinoes before the public, and was produced solely from Sussex; white plumage and white skinned, squarely built and massive, with short legs and neat head. After a season or two they disappeared and came up again under the name of White Orpingtons.

There are other varieties of Orpingtons like the Spangled, Diamond Jubilee and Blue, besides the Rose Comb varieties, but in America the Buff, Black and White will always be the predominating three varieties of Orpingtons.

Rose Comb Black Bantams

This variety is one of the oldest of all the bantam tribe, and I think one of the most popular. For beauty, none can surpass them. The Black Rose Comb has been brought nearer its ideal than any other variety of bantams, with the exception of the Game. What can one say looks so pleasing as a nice flock of Rose Comb Black Bantams running about on the lawns with their proud carriage, beautiful rich sheen, bright red combs, wattles and face and milk-white earlobes? Full of vanity, they seem to realize the efforts made for years by enthusiastic admirers to bring them so near the mark of perfection. More can be said in favor of them than that they are beautiful to look at, for I have found that they are good layers, and when we take into consideration the amount of food consumed they more than hold their own with most of the larger breeds. In my experience breeding this variety, I have found that they can be classed as a non-setting variety, for I have never had them take to the nest, with the exception of some old bird; but even in the case of old birds it is rare. I find that by setting the eggs under hens of some larger breed of medium weight that one has better results. In regard to eggs being fertile, I never have had cause for complaint, and have always had good hatches. I think the best time to set is about June 1, or any time from May 15 to June 15. The chicks come healthy and strong and with reasonable care, proper feeding and clean housing can be brought to maturity. One can always find a sale for this variety of bantams, and for a good specimen a price that will make the effort of breeding them worth the while. Bantams of all varieties are profitable as well as pleasing, and we all have our favorite breed, but for me none can come as near my ideal as the miniature Hamburg, known as the Rose Comb Black.—Geo. L. Young.

A GROUP OF GAME BANTAMS

Game Bantams

The Black Breasted Variety

This variety of bantams, like the game fowl of the same name, should have the richest of black red markings and be distinguished by top color of a rich red, with breast, under-body color and thighs perfectly black. The standard description for a Game of this variety calls for head, neck and saddle of a light orange, free from black stripes; shoulders black, except the shoulder coverts that cover the space between wing-bow and back, which should be red; wing flights black; wing-bow red; greater and lesser wing coverts glossy black, forming a distinctive bar across the wing; primaries black, except the lower feathers, the outer web of which should be bay; that part of the outer web of the secondaries which forms the wing-bow should be bay color, the remainder of the feathers black; tail black, with lustrous sickle feathers and coverts.

Proper coloring in the female calls for a light golden hackle with a pale stripe through the middle of the feather; the back a golden brown, finely penciled with darker brown; a salmon breast which shades off to a lighter color; under part of the body ashy brown; the primaries of the wing a pale black or dark brown; tail a pale black, except the two top feathers, which should be powdered with light brown. In describing the color of an exhibition Black-breasted Red Game hen, the fancier would state that she ought to have a beautiful, clear, golden-brown color; a salmon breast, and under-body of an ashy color. But the specimens usually selected for the prizes have more of a light brown, or grayish top color, penciled or marked with a shade of the same; that is, just a little darker than the ground color. The most striking demand, however, is for regularity or evenness of color, and for station and for station and carriage.

It is claimed in England that there has been some Duckwing blood mixed into the females of the Black Red variety to lighten or brighten the shade or color which many describe in England as grayish brown. The hackle and saddle color of many of the males is a bright golden orange. In fact, the English seem to prefer a much lighter shade of color upon all their Black Red fowls than do the fanciers of this country.

One of the most important features, and one that has been considerably neglected of late, is the size or weight of the Game Bantam. It is very unfortunate to see an award given to a bird, either male or female, that is over standard weight, even at a fall fair or an early winter show. The standard disqualifies a Game Bantam cock that weighs over twenty-three ounces or a hen over twenty-six ounces, but two ounces less than these weights disqualifies a cockerel or a pullet. Whenever prizes are given to specimens that exceed these weights, even in the slightest degree, an unpardonable injury is done to the breed. Bantams should be kept bantam size and weight. Everyone should insist upon this, as it is of the greatest importance both to judges and exhibitors.

BROWN RED GAME VARIETY

Brown Red Game Bantams are identically the same in form and style of markings as the Black Reds, the only difference being that where the coloring of the Black Red is a rich or bright red, the Brown Red should have orange or lemon color. Our standard describes the Brown Red as lemon color. If we compare true lemon color with the top color of any of the Brown Red males, we find that they are much darker than the true lemon. While this is being somewhat improved from the old-time deep orange color, it is not yet light enough for a lemon shade.

We prefer the orange top color for the Brown Red variety, but as long as the Standard declares for the lemon shade they should be bred lighter in color than those seen at the present time. The black breast of the male should be evenly laced with the lemon or orange color to conform with his top color. The breast lacings add beauty and attractiveness to the specimen, but whenever they are too heavy, or splashed in the center of the feather, they are less attractive than a solid black breast. The female of this variety is black, excepting the hackle of the neck, which is lemon color with a very narrow stripe, and the breast feathers, which are black, evenly laced with the lemon color.

OLD ENGLISH SPANGLED GAME BANTAMS

The Brown Reds, like the Black Reds, usually reproduce their true color. The Brown Reds have not been bred so delicately as the Black Red variety. Another distinguishing feature is the purple, or "mulberry," face. This includes the comb, face, wattles and ear lobes. The shanks of this variety are dark or nearly black. In mating the Black Red variety, it is often necessary to introduce wheaten blood, as it is called, to improve the color. The Brown Reds seem to hold their color strong and true, and do much better when bred distinctly alone than when any other blood is intermingled to improve them. Brown Reds will produce both males and females from the one mating that fully conform to the Standard demands.

GOLDEN AND SILVER DUCKWINGS

In this country we make two classes for the Duckwing Games—the Golden and the Silver. The greatest difference in these is in the top color of the male bird. The Golden Duckwing male has the top color lemon or orange almost as dark as the Brown Red, while the Silver Duckwing should be silvery white without any tendency to orange, straw color or yellow. One of the most beautiful of all the Game Bantams is a true, even colored Silver Duckwing male that shows the distinctive features of black and white in the plumage. In the Brown Red and both the Duckwing varieties, the division of color is identically the same as in the Black Reds, the only difference being that the Silver Duckwing has the silvery white top color, and the Golden Duckwing has the lemon or pale orange top color.

The females of the Duckwing varieties are almost identical in color except that the Golden Duckwing female should be a little darker in the shade. The Golden is described as being a slaty gray, finely penciled with darker gray, while the Silver Duckwing is a silvery gray. In other words, those that are the lightest and clearest of gray, lightly penciled, or stippled, with a darker brown, are classed as Silver Duckwings. Those that have the darker, slaty-gray color with darker pencilings are classed as Golden Duckwings. Nothing is more beautiful of bantam kind than a well finished, finely shaped, delicately colored Silver Duckwing pullet.

These are not as popular as some of the other breeds, but they seem to be growing in public favor, especially in the exhibition hall during the past few years.

RED PYLE GAME BANTAM

This beautiful variety is quite difficult to produce in the proper shade of coloring that is demanded of the best specimens. The male should have pure white breast and body color, where the Black Reds have black top color; head and neck should be bright orange or light red; no striping whatever in hackle or saddle; back and other markings red or crimson, the saddle conforming to the shade of color of the hackle; body pure white; tail pure white; shanks yellow. No longer does the Standard permit a Pyle Game to have willow shanks—they must be yellow. The female of this variety should be pure white, excepting the breast, which is salmon.

While the above is the standard of perfection with the Red Pyle Game, it is quite unusual to find them as true and pure in color. Nearly all of the males show some slight marking of dark color in the plumage, and the same is true of the females. This comes from the use of Black Red blood as a cross to enrich the top color of the males. Wheaten-bred Black Reds that have yellow shanks are as a rule used for this purpose. The truer and purer the color of the Pyle, the more desirable it is. Nothing ought to be more despised than the faded light colors in this variety that are often termed White Pyles. There is no such thing among bantams as a White Pyle. Those who use the term merely push forward weak-colored specimens of this variety without Standard authority. Such have been bred from Pyles that have almost lost the brilliant top plumage essential to their beauty and desirability. The white sports, as they may be called, both from the Pyle and the Birchen have been used for building up the present variety of White Game Bantams.

WHITE AND BLACK GAME BANTAMS

We now have pure white and pure black Game Bantams of excellent quality. The Whites are more finished and attractive than the Blacks. As stated above, the Whites come as sports from the Pyle and the Birchen. By selecting pure white plumage and yellow shanks, a strain has been produced that almost equals in quality any of the Game Bantams. The great drawbacks with the Black Game Bantams at the present time is their deficiencies in station and in length of shank and thigh. They have not been bred up to that elegance of carriage and station necessary to Game Bantams of good quality. The color must be pure white throughout for the white variety, and pure black with metallic lustre throughout for the black variety.

BIRCHEN GAME BANTAMS

This, the newest of the Game Bantam varieties, differs from the others only in having the silvery white where the Brown Red has lemon or orange color. The

breast of the male is laced with the same silvery white; the female is black throughout, with white lacing on the breast. This lacing, both in male and female often extends well down under the body between the thighs. It is better that it should not go so low upon the body plumage. The neck of the female is silvery white, with a very light stripe of darker color in the middle of the feathers. The Birchen Game Bantam has a purple face. It is the counterpart of the Brown Red, as the Silver Duckwing is of the Golden variety. The Brown Reds have a dark or orange color, where the Birchens have a silvery white top color and markings. The different colors in the bantams have been produced by crossing one or more of the varieties.

The Birchens were evolved originally by crossing the Silver Duckwings with the Brown Reds, and then selecting and mating for color. In pairing off the several varieties, the Brown Red and the Birchen would stand as the lighter and darker of the same, as the Golden and Silver Duckwing do for the lighter and darker of the Duckwing varieties. The Black Red is the original and true variety, the Pyle having been produced through intermingling the Black Red with the White Game Bantams.

The beauty of all these varieties of Bantams depends largely upon their quality. The Game Bantam of inferior quality has no value whatever, while the really meritorious specimen is highly esteemed by all bantam fanciers. No other bantam sells for the prices that have been given for the Game Bantams.

Color in Buff Plymouth Rocks

Quite a number of beautifully shaped Buff Plymouth Rocks were shown the past winter. There was less placing of awards upon badly shaped, poorly colored birds; less favor was shown to the pale than colored specimens. More frequent was heard the statement: "There is true surface color backed with good under-color." Such kind of color can be depended upon to reproduce even better than itself. If all would strive for this true color the classes would be more attractive.

We doubt very much the advisability of a set determination to hastily drive from their plumage all presence of foreign color. We hope to see the time come when we shall have the complete buff fowl entirely free from any trace of aught but buff. When this time comes we hope to see the true golden buff and not the thin washy color too often seen. For some unknown reason the color preference of judges and breeders in some cases leans toward this thin shade of buff, through which the white under-color shows on back and wing bow of males. The true color should be so closely laid in the web of the feather as to hide from view the fact that white under-color is present.

Some of the most beautiful surface-colored females we see have almost pure white under-color, but the surface color is so perfect in the web as to form a solid, even color all over. This same shade may be present, but so thin and wavy as to permit the pale under-color to show through. This gives the weak, thin appearance of surface color too often seen. It has the appearance of being ticked with white. No good results in breeding can come from the use of such males. Some of them are produced by crossing a white female with the buff males. Such crosses may be of value if the females only are used for at least three generations.

It is quite time that males with red wing bows and black tails should be turned over to the cull department; they should be discarded from the breeding yard and show pen. The days of their usefulness have gone; too many of fairly good size and color are produced for anyone to hope to continue in the use of these bad colors and succeed.

When we think of writing of the buff color, we feel almost ashamed to ask anyone to follow our pen, so often has it said, over and over again the same thing until we feel that it is an imposition upon good nature to say more. At the same time, a good thing is always in line; so is good buff, and the real beauty of the color is its perfect evenness of shade throughout. The preference should always be cast with the shade described as "golden buff." The question as to just what constitutes golden buff may be hard to answer in a way that all will grasp its full meaning. But there can not be any possible chance for anyone to misunderstand us when we say, of whatever shade it may be, every single feather should be of the same shade on the female, while in the male the whole top color should be absolutely of the one shade of color, and that glossed with a lustre; the under-body and breast color of one even shade to match the surface of top color, but in shade of color not so strong.

When you hold in your hand the specimen and move its head back so the hackle will sweep over the back to the tail, the whole should conform in shade of color in both male and female—back, saddle, wing bow and all of the same shade of color. In the female the entire neck, back, breast, body and fluff should be of the same shade, while in the male the breast and body plumage is a little lighter in color, lacking, as it will, the lustre of the top color. Such evenly colored specimens is the true condition demanded of whatever shade they may be.

Red, snuff color or brown is not buff, neither is pale lemon. Still, we see all these colors to some extent as we go from show to show during the winter, but as long as better conditions are present each year we know that there is improvement. Stick for better colors and produce them by continually mating together the truest and best colored specimens to be secured. Hold to your own blood lines. Build up your own true breeding line on the motto: "Shape makes the breed, and color the variety," and remember that to have a truly good specimen the very best shape and color must be combined in the one specimen.

BUFF PLYMOUTH ROCK

There does not seem to be any question as to the true value of this variety for all purposes for which poultry are kept. They are splendid egg producers and fine table poultry. The question has come to the front for consideration as to whether the Orpington family will become more popular than are the American breeds. Not unless those who breed the latter permit them to be lost sight of in the flood of praise a few put forth in favor of the new fowls. There is scarcely any effort needed to have the Orpington enthusiasts write often and freely of their favorite fowls. On the other hand, one must almost beg those who breed Buff Plymouth Rocks to have a short article written of their qualities as a fanciers' fowl. The same is quite too true of others as well. The way to keep your favorite fowl to the front is to write good articles about them, and have illustrations made and published on all sides.

Shall We Do It?

I have noticed it mentioned twice in The American Fancier about calling the "Columbian Wyandottes" "Columbians." Now that will never do, for if we do we will have a new breed, then a variety like the Rhode Island Reds, rose, single and pea comb. They are here and just as soon as they are made a breed, trouble will begin. Another reason, to my eye, is that no shape looks as nice with the Brahma markings as a Wyandotte shape; not even the Brahma shape can give the pleasure to the eye that a Wyandotte does with those curves.

It may be that I cannot see anything but Wyandotte, but when Mr. Briggs, the originator, had them in mind, he modeled from the Wyandotte shape. When he took Plymouth Rocks he got shape quicker. I took the Brahma, and the birds that have been winning for six years are of the Brahma-Wyandotte strain. I think I have had more personal experience in bringing this variety up to the high standard that they now have than any other person, and I have done it alone, and ought to know how to appreciate the quality much more than any one else. To make a breed of them means to change shape, and right here is where they will be spoiled, for they are getting into shape and have improved more in the last three years than ever before.

Our judges will know that up to three years ago a good male bird was a rare thing, but now they are better than the females. I was asked four years ago if I could not get the males better, as the females were good enough, and since that time good males are plenty. This was done by pair matings.

I am dead against the idea of making them a breed by themselves, and would like to hear from all others that are interested in the Columbians. Why do not all breeders give their views on this subject? Mr. Briggs is the father of this variety of Wyandottes and I know he is a Wyandotte breeder, and he gave them a good name. I have seen in some journal an advertisement of a new breed called Columbians. Why not let the advertiser go it, for he got there first? I have noticed that Brother Pervis likes the name "American," and I will give my views on that also. I have always thought that all American breeds should be of one shape, Plymouth Rocks, Wyandottes, Rhode Island Reds and Dominiques, and of course should want them to have the Wyandotte shape.

Let us have this subject threshed out before fall, so no one can steal the march on us at Hagerstown. We cannot get them in the Standard that is being printed so why not wait a while and keep improving them. I would also like to hear from breeders on this subject.

I acknowledge The American Fancier has always given the Columbians a place in its columns when they needed help, but now they are helping themselves on their own merits. Will watch and wait for more on these two points.—Edgar E. McIntosh.

How Mexicans Test Eggs

It is a common sight in the plaza in a Mexican town to behold a stall-woman who is selling two reals' worth of eggs pick them up one by one, put one end then the other to her lips and hand them over to the customer, who repeats the same identical operation. To the inexperienced on-looker it seems as if they were tasting the extremities of the eggs. As a matter of fact they never touch the egg with the tongue.

The idea of the performance is that when an egg is fresh one end is distinctly colder than the other. The end which has the air chamber is the warmer of the two. The human lips are exceedingly sensitive to heat and cold, and even the novice at this form of egg-testing promptly becomes a capable judge. If both ends of the egg reveal the same temperature, that egg may be counted as bad, as it is a fairly good sign that the air chamber is broken, and the contents spread equally within the shell.—Farm Machinery.

TO ADVANCE
The Interests of Poultry

To Everyone Sending Fifty Cents for a Year's Subscription to

THE FEATHER

The leading illustrated monthly devoted exclusively to Poultry, Pigeons and Squab growing, I will make A PRESENT of My Two Latest Books

The Egg Question Solved
(Price, 25 Cents)

How to Grow Chicks
(Price, 25 Cents)

This offer cuts prices in half. The Feather a whole year and a copy of these two valuable books. All for only 50 Cents. Address

Editorial Gossip

One writer tells us that if we wish to teach the hens to roost where they should at night and not have them set upon nest boxes and the ground, to grasp them firmly by the tail, lift them up, set them on the roost and pull them back a little by the tail; that the hen will then grasp the roost, and there you are for the rest of the night. Why be so inhuman as to grasp her by the tail? Why not pick her up quietly with your two hands about her wings and place her upon the roost, where she will set quite as well as if her tail had been almost pulled out.

Our friend, Sharpe Butterfield, of Canada, made an address at a well-attended meeting in the State of Michigan. His subject was "Poultry and Pet Stock Associations," and the general subject of stock-breeding. Sharpe is a bright light at this kind of business and when he runs out of talk and information, it will be long after sunset or early bed-time.

One writer complains that people who have peculiar or odd kinds of poultry not generally seen upon farms do all their advertising in poultry journals, and complain that this is scarcely right, as it gives the farmer no chance to find out about these kinds of fowls. This is surprising, for there is scarcely an agricultural paper now issued in the country but that devotes a half page and more in each issue to poultry, and there is scarcely an agritural paper that does not contain more or less poultry advertisements, but we find that people who wish to have good poultry usually purchase of those who advertise in the poultry papers, believing that these must have the best, which is generally the fact.

There is considerable comment about the method advertised of selecting the best laying hens. One man describes the best type of a laying hen as follows: "An intelligent-shaped head, short beak, fair-sized comb and wattles; neck short, stocky and nicely curved; body medium length and not too deep; full, wide, plump breast that gives her a graceful appearance, back medium length, fair width, with narrow shoulders, tail medium length and not too heavy and carried in the angular position. Now, all this is very good, but there is a more simple way of selecting a good laying hen than this, and that is the same as you would select a high quality milch cow. A hen that has plenty of breast and crop for the consuming of food, and a strong body and abdominal formation for the converting of the grain into eggs is the profitable kind of hen. Narrow-breasted, slender-bodied hens seldom, if ever, produce a large number of eggs.

We are pleased to notice many attractive features in the recent issues of the Reliable Poultry Journal. Artist Sewell is doing some beautiful work, and the compilation of interesting matter is well selected.

We are watching with interest the report of the Egg Laying Test, being carried on in the State of Kansas at the experimental station; but we do not think that this contest has been as well patronized with entries as it should be. It runs from November to November, and we trust that it will be taken up again another year, and that there will be more entries and more interest taken in same. There should be more of these egg contests throughout the country; in fact, every State should conduct them for the benefit of the poultry interest and for the benefit of the people who are so desirous of gaining information along these lines.

We clip the following from Successful Poultry Journal: "Of course raise poultry and produce eggs for market, but why be satisfied with market prices, when eggs from the best standard-bred birds sell for three to five dollars per setting. and individual birds for five to one hundred dollars each?" The backbone of the poultry business rests with the production of dressed poultry and eggs for market. We believe that every one that goes into the market poultry business should have standard-bred stock. The better in quality this is, the more profitable it will be. The best of these can always be sold for good prices for exhibition fowls; none are too good for market or egg producing; combine the two and select or cull your flocks both ways—the best may be used for exhibition stock, the poorest sent to market, and the others kept for egg production.

A little charcoal is an excellent thing for poultry. Charcoal in the crop and gizzard of a fowl is like a soda tablet or a soda and charcoal or a mint tablet to the human being for indigestion. The charcoal sweetens the crop and gizzard and removes the possibility of acidity or fermentation. Clover and alfalfa are both good for poultry, and there is nothing better than these for the green food product in winter. At the same time it is quite possible to force fowls to eat too much of both. We have seen mash food mixtures made with so much charcoal and clover meal in them that the poultry would not eat of them until forced to do so through hunger. This is a mistake. The poultry should be allowed to eat of the charcoal and the clover as well at their will. Keep the charcoal in small particles in the box where they can continually help themselves, and provide during the entire winter plenty of short-cut alfalfa and clover hay.

Breeding high-class, exhibition specimens is an art. It is not a business, nor is it the result of careful study; it is absolutely an art, and it takes an artist in his line to accomplish great results. When we stop to consider that in some of the larger shows a single class will contain over a hundred specimens, the production of the one that stands out over and above the other ninety-nine is certainly an art. This kind of art must be applied to selecting the birds and mating them for the production of the egg that hatches the chick. This same art is used in growing and preparing the chick for the show-room, and the final finishing touch of the artist's hands that places the specimen in the show-room in spotless condition and the finest fetter is the accomplishment of the master art of the profession.

It is never too late to mend, nor is it ever too late to do better. It is both too soon and too late at all times to countenance the presence of inferior specimens in the yards of a true fancier who makes a pretence of selling eggs at long prices for producing exhibition stock. Those who sell eggs at five dollars, or more, per 13, should always make it a point that every specimen in the breeding pen from which these eggs are derived are high-class precimens, worthy of producing eggs worth forty cents apiece.

It is a question of vital importance to the standard-bred poultry business as to what rule should be adopted as to the per cent of hatch the customer has a right to expect from a clutch of eggs that has cost him forty to sixty cents each.

We notice a query in some of the poultry papers as to how long eggs may be kept and yet produce a reasonable number of living chicks, if placed under hens or in incubators for hatching. Our own experience in this connection might be amusing, at least, to some of our readers. Three summers ago an enthusiastic admirer brought to our door a basket of eggs from his splendid White Leghorns, and insisted that we hatch them and keep the chicks for our own pleasure. These eggs had been brought many miles by the careful friend, and when he departed, they were placed in a dark corner in the cellar for safe keeping. Two months later an acquaintance called—a farmer. In fact—to know if we could not furnish him some good eggs for hatching. We stated that we could not, but was reminded by a member of the family of the basket of eggs that had been left over two months before in a dark corner in the cellar. This basket was brought forth and given to the farmer, who carried them home triumphantly, and placed the thirty eggs under two hens. Some six weeks or two months later, when at his home, he triumphantly showed us fifteen or sixteen smart young White Leghorns that had been hatched from these eggs. The eggs were packed in a basket for shipping, and had never been moved, turned or disturbed during the two months' sojourn in the cellar.

Some of your hens may have laid so many eggs already this season that they are almost worn out with their efforts. Turn these out and let them run about as much as possible. This will be of great benefit to them and may save them for more and better work another season. Do not overwork your hens too much simply because they are great egg producers. They need a rest as well as yourself and should have it semi-occasionally.

A pen of fowls that was mated last fall and has been kept busy at work laying eggs all winter for family use and all spring for hatching have about done as much as should be expected of them for best results in the future. This refers to standard-bred poultry that are kept for producing eggs for fine stock.

There is quite a difference between keeping a pen of hens for the reproduction of their kind of better quality than themselves and keeping them simply for the purpose of having eggs to sell to market. One egg, if it is fresh and well formed, is just as good as another for market, but there is a great difference in eggs which are to produce exhibition stock. The fowls to produce these should have every advantage in the world and not be overworked or reduced in vitality, the one thing that is most needed in exhibition poultry.

It is pleasing to note the renewed interest being taken in the cultivation of Black Leghorns. They are beautiful fowls when of good quality.

A SPECIAL
Combination

In order to more thoroughly complete our plans of organization, we have decided to make this Special Combination Offer to all lovers of Poultry and Pigeons of

The Feather and
The American Fancier

ONLY ONE DOLLAR for BOTH PAPERS for a WHOLE YEAR

We are positive there never was a better opportunity for securing the Cream of Poultry and Pigeon Literature than is to be found in this combination. You get a paper every week edited and illustrated by the best talent in the country. It is a rare chance, and you can not afford to miss this combination. Send a DOLLAR BILL without delay and have your name on our list. Address,

The HOWARD Pub. Co.
714 Twelfth Street N. W.
WASHINGTON, D. C.

Andrew Riddell, Shushan, N. Y., has been appointed superintendent of poultry at the great fair to be held at Cambridge, N. Y., September 5 to 8. This is one of the largest and best functions of its kind held in the fall and annually draws out big teams of birds. The selection of Mr. Riddell is a good one for the office he is to fill as his practical experience in handling and exhibiting birds is well known. One of the needed changes at Cambridge is: Single birds and pens compete separately; i. e., birds in pens cannot compete for prizes offered on single birds. A large list of specials will be offered as usual. The judges will be announced on June 15 when the premium list is expected to be out of the hands of the printer.

The New York State Fair dates are September 11 to 16, following Toronto, Canada. Mr. J. D. Jacquins is again superintendent of poultry and promises to eclipse all former efforts to make the Empire State fall exhibition the largest and best on record. Entries at this show close thirty days prior to the opening day.

The Fulton County Fair at Johnstown, N. Y., September 4 to 8, will bring out the largest local entries of any fair in the United States, as prizes are only offered on birds exhibited by breeders who reside in the county. Last year nearly one thousand birds were shown, a fine record for a comparatively small territory. But real fanciers are numerous in this section and the quality of the birds of the very best. B. W. Mosher is the superintendent, and there is no better one in the business.

Major Theodore Sternberg, Ellsworth, Kansas, will attend the reunion of his old regiment, the 121st of New York, at Ilion, N. Y., June 15, and expects to run over to Johnstown and Gloversville to visit old friends and chicken fanciers. He will receive a warm welcome, for the Major has a host of friends in this neck of the woods.

Frank Bantam Zimmer has sold his entire flock of Silver Sebright Bantams to the tall Sycamore of Schohone, Mr. Clyde Hannibal Proper. This gives the latter in addition to his own famous flock, the largest and greatest lot of Silver Sebrights in America.

We regret to learn that Dr. C. J. Andruss, Canandaigua, N. Y., lost nearly a dozen of his best birds recently by a dog accidentally gaining entrance to one of the breeding yards. Before discovered he had succeeded in killing the birds mentioned and no doubt would have finished the balance in sight, had not the Doctor arrived on the scene.

The Interstate Fair Association of Lynchburg, Va., incorporated, will hold its first annual fair October 3 to 6 in connection with the big Horse Show to be held in the same city the same week. This new society is composed of the leading business men of Lynchburg and promises to be one of the greatest events in the South. Frank A. Lovelock, the well-known exhibitor and expert judge of cattle has been employed as secretary, and this means an up-to-date management of affairs. The poultry department will be a special feature.

The 1905 Winter Fair of the New York State Breeders Association will be held at the Armory, Syracuse, N. Y., December 19 to 21. Prizes will be offered on pairs of dressed fowls, dozens of eggs and half dozens of squabs. There is also a sweepstakes prize for the best pair of dressed fowls, the following varieties competing: Brahmas, Cochins, Langshans, Plymouth Rocks, Javas, Wyandottes, Minorcas, Andalusians, Leghorns, Hamburgs, Dorkings, Houdans, La Fleche, Crevecœurs, Orpingtons and Games. This attempt to increase an interest in dressed poultry is a laudable one and we hope breeders in the Empire State will do all in their power to make the exhibit as large and complete as possible.

A new constitution and by-laws is being prepared by several members of the American Poultry Association and several will, no doubt, be presented at the adjourned meeting to be held at Hagerstown next October. Final action, however, will not be taken until the annual meeting next winter. The old constitution is punctured with weak spots in several places and a thorough overhauling and rearrangement is in order. Past experiences have shown the necessity and importance of this.

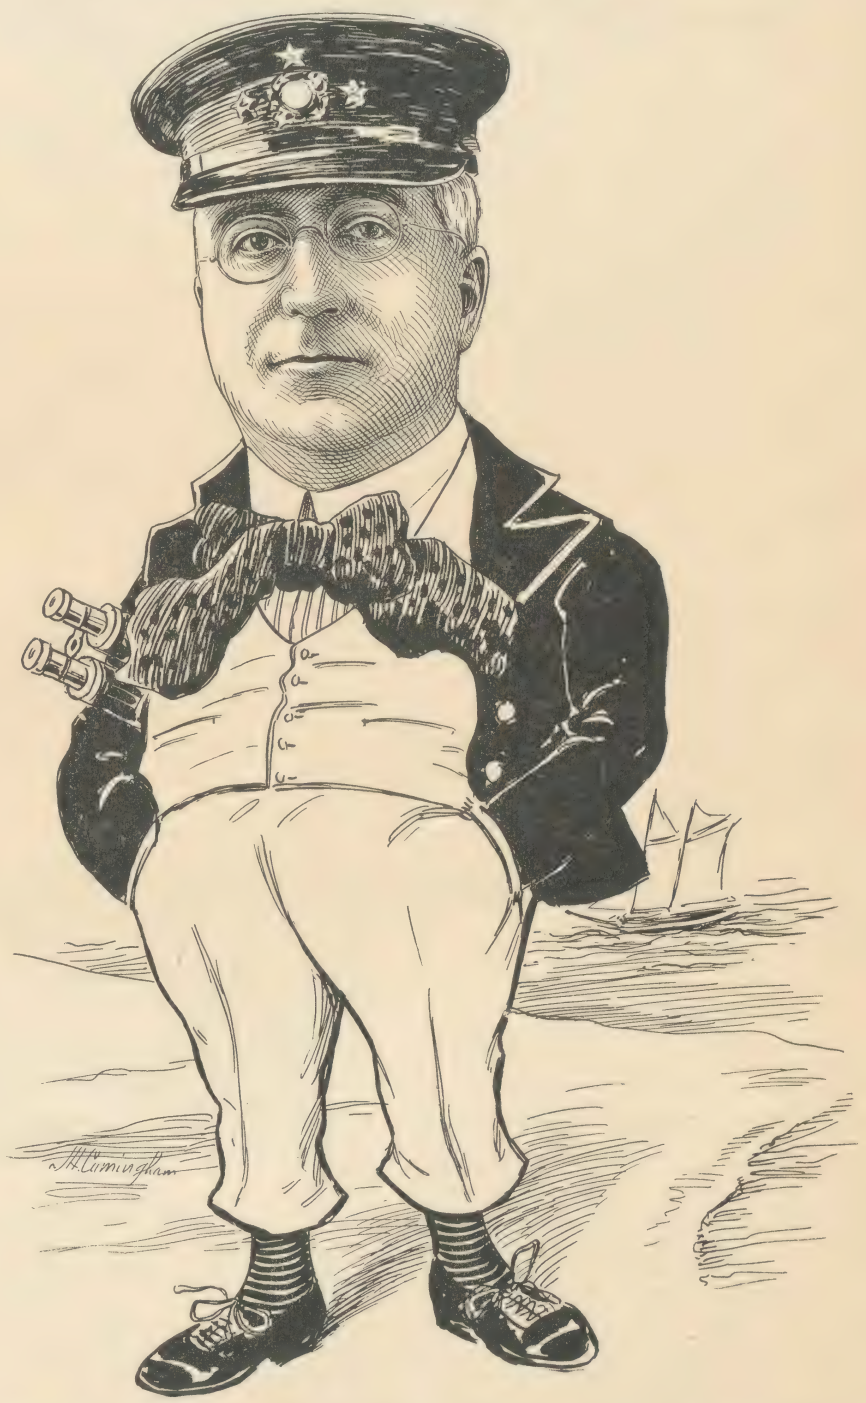
There will be a number of changes in the incubator business, some managers stepping down and out and others changing their jobs. This business is getting to be very strenuous in more ways than one.

In the American Fancier of May 27, the report of the Kansas Egg-laying Contest gives the Rose-combed Rhode Island Reds the lead by a considerable margin; in the report appearing in The Country Gentleman the same week, the American Reds are in the lead. But this is evidently the same lot of birds as the Rose-combed Rhode Island Reds, the averages being the same. The test, however, shows this now-much-discussed variety to be a prolific layer and able to beat out Leghorns, Wyandottes and Rocks without much trouble. The Light Brahmas made a rather poor showing. This is to be regretted as Brahmas when properly fed and handled are excellent layers. At least they used to be in the glorious past when they led all other varieties in popular favor.

Mr. E. W. Wickey in the Poultry Herald writes: "From the evidence now at hand, it seems the first mistake was made when the Single Comb Reds were admitted at Rochester. A disinterested investigation tends to show that the Rhode Island Reds should not have been admitted. It is a mongrel breed, if indeed it is a breed. No other breed of fowls can be or is used to practice such fraud or deception upon the public. Off-colored birds of other breeds or buff color are palmed off to the inexperienced for Rhode Island Reds, and the Rose-combed birds thrown from Single Comb matings are sold as Rose Comb bred."

This is rather strong language for an ardent and strenuous supporter of the American Reds, such as Mr. Wickey appeared to be at Pittsburg, to use. Strange that such an old breed as the Rhode Island Red, that figured in the building up of the Buff Wyandottes and Buff Rocks over fifteen years ago, should suddenly become a mongrel. Rhode Island Reds in the past few years have shown decided advance over those in the past, and certainly indicate their thorough breeding qualities most unmistakably.

There will be something doing at Indianapolis in July. The incubator manufacturers are to meet there and organize for the purpose of fighting the just discrimination made by insurance companies against placing incubators in dwellings or outhouses. It is proposed to have thorough examinations made of the best incubators and have those that pass the required test classified as good risks; all other cheap and unsafe machines can then be relegated to where they belong, either out-doors or out of business.



Another warm session is that of the Poultry Publishers Association which we understand will be called at the same time and at the same place. Perhaps all the evils portrayed in the Successful Poultry Journal cartoon will be remembered and a few, not portrayed, be daintily handled, such as the abuses practiced by agents—this is a ripe melon that can be cut open to much advantage. We could give a bit of history for such a gathering relative to the ways that are peculiar and arbitrary of men who live by commissions. It is a branch of the poultry publishing business that is decidedly unsatisfactory as conducted at present.

The judges at the Lewis and Clark Exposition, Portland, Oregon, will be Theodore Hewes, Geo. D. Holden, C. G. Hinds, E. J. Ladd, Ross C. Hallock, Thos. Wilkenson, Harry H. Collier and W. W. Browning.

T. E. Orr, Frank B. White and E. W. Wickey constitute a new triumvirate in the A. P. A.

Will the next secretary of the American Poultry Association be from the West? There are some very good men out there who would fill the office with honor to themselves and to the society. But the

Gallery of Fame

THIS interesting portrait of Mr. C. M. Bryant, Wallaston, Mass., proprietor of the House Rock Poultry Farm, better known as the home of the Rhode Island Red family, is one of the best we have presented to our readers. With this short introduction we are contented to stop and leave the balance to our reader. Mr. Bryant is one of those gentlemen it is a pleasure to meet, and notwithstanding his naughtycal proclivities he is a devout worshiper at the shrine of poultrydom. He is a pioneer breeder of the Rhode Island Red, and is president of the Specialty Club of that breed. He distinguished himself at the Pittsburg meeting on the "Red" question; his gentlemanly bearing and liberal views won for him many friends. We are glad we know him

most available and efficient candidate is likely to be reluctant to take an office. There are others who would jump at the chance perhaps, but the question arises will the great rank and file of members look with favor on the selection of a man who has not been or is a true fancier and practical poultry breeder, and who has not been identified with the American Poultry Association for any length of time. We know of several willing mortals that are yearning to serve the A. P. A. at three hundred dollars per year and would promise to be very good and attend to the business of the Association in a most perfect manner. If youth and gall are the requirements some of these candidates might win out.

The old cry that speciality clubs should make the standards of their breeds and not allow the American Poultry Association to tinker with or make them for them evidently will not decrease. It gets quite loud at times in the vicinity of Boston. But why should false impressions be sent abroad regarding the American Poultry Association. The latter has always considered the feeling of the members of specialty clubs and has accepted the standards formulated by the latter and allowed full and free discussion at the revision year meetings. It has never changed the intent or meaning of an accepted club standard. It is true that changes have been made to conform to style of the new book and in some instances better sentences incorporated. In the Standard for Games and Game Bantams by the American Exhibition Game and Game Bantam Club, no material change was made, and, in fact, it stands almost the same as it did in the old standard. We believe the same is the case with Brown Leghorns and other varieties where clubs have been submitted descriptions, etc. The hardest work the revision and publication committee has had to do is with breeds and varieties that are not represented by specialty clubs. This is noticeably the case with Hamburgs, much correspondence being necessary to get the views of leading breeders and fanciers. The same might be said of the Polish, Indian Games and waterfowl. A thorough study of the English standard by several members of the committee has revealed many new ideas and assisted materially in getting a better standard for several varieties than in the past. It is just such work as this that delays a publication and there are members of the committee today that while pushing the work ahead in order to have the Standard ready in August, feel much more like taking additional time and going carefully over the entire book again.

The writer of these notes well remembers the criticisms hurled at the old Standard, and the hundreds of mistakes found in it were rather amusing to the critics. Since engaging in the building up of a new standard, which has taken several years instead of several months, mistakes crop out in unexpected places. The desire to avoid all possible mistakes, errors of omission and commission, is strong with every member of the committee. The press work is the least responsible for either delay or failure to produce a book worthy of the American Poultry Association. We have dwelt on this simply to place the matter squarely before some readers who are impatient at the delay. Recent letters received indicate that some imagine it up to the printers to deliver the books at once.

Mr. Edgar E. McIntosh in a letter published elsewhere in this issue objects to the name Columbians, and believes Columbian Wyandottes to be the better and more consistent. He rightfully admires the shape of the Wyandotte and gives this as his principal reason for retaining the word "Wyandotte." Nevertheless, it seems to us that the Columbian Wyandottes could easily become a distinct breed under the name "Columbians" and still retain that beautiful Wyandotte type Mr. McIntosh admires so much, and which and believes should be characteristic of all American varieties. The barred Plymouth Rock fanciers, at least a goodly number of them, have had a rather strong leaning toward the Wyandotte type and some of the sketches submitted to the revision committee looked suspiciously like Wyandottes. One well-known breeder of Rocks remarked to us at New York in answer to the question, "Why do you favor the Wyandotte type?" "Because the people and my customers like it." This applies principally to the male, the female, as a rule, conforming closer to real Rock in shape. The Standard illustrations of Rocks and Wyandottes should aid breeders and judges in keeping the two types apart and not allow the personal choice of the one influence the judgment over the other. As that old veteran breeder and judge, F. B. Zimmer, remarked many years ago: "Shape makes a breed; color, a variety."

Tests made with new breeds at the Ontario Experimental Farm, Canada, proved Salmon Faverolles to be rapid flesh-forming chickens. The Jubilee Orpingtons grow very rapidly, and are completely feathered out when thirty-nine days old. From general appearances, they would make a fairly good chicken for broiler purposes. In early maturity, for the production of eggs they have proved themselves better than Rocks, Wyandottes, or other Orpington varieties. They did not grow as fast in proportion after ten weeks of age as they did during the first ten weeks of their lives.

Anent our remarks concerning the Dallas (Texas) Show being the first comparison show to be held in the Lone Star State, Editor McReynolds, in Southern Poultry Journal, remarks:

"Wrong again, Editor Drevenstedt. The first comparison show was held at Dallas last January, but the association didn't know a good thing when they had it. The next show will be scored and the usual number of errors will be made as well as the usual amount of kicking. Instead of going on as started, until a great show was built up, they have taken the first step toward killing it. It will be just what all other score card shows have been, will never grow, have about the same number of birds each season and be about the size of all others. It will be a good show, a successful score card show, but never a great show. If the score card was used at Madison Square Garden, inside of five years Johnstown could have just as large an one as New York. The score card is all right for small shows, but it don't make great ones. When used at one only a reporter that is a first-class liar can count a thousand or more birds. Dallas made a start for 2,000, but the association need not now worry about coops for over 750."

Conscience is something it never pays to juggle with.

To the victor belongs the spoils when the spoils don't spoil the victor.

PRACTICAL POINTERS

Keep the poultry house floor dry.

Feed at regular hours; system pays.

Incubators are a necessity, not a luxury.

Feed the fowls well, but do not overfeed.

Do not feed too much corn to growing chicks.

Dryness must be considered in poultry raising.

For hatching feed grain and no forcing food.

Grow a few good ones rather than one hundred scrubs.

Lime and gravel are both necessary in the poultry yard.

Feed the hens slowly, make them work to get the grain.

Avoid extremes of any kind if best results are to be obtained.

All coops for hens and chicks should be well littered with cut hay.

Keep the brooder warm, light and cheerful for very young chicks.

Charred corn should be given to fowls occasionally, as it aids digestion.

Examine the hen houses for lice. Now is the time to begin the fight against them.

One of the best egg producers is a plentiful supply of good, clean, wholesome water.

A little salt is good for the fowls, but an excess is detrimental to their proper growth.

Do not neglect the present and find fault this winter when those more diligent win the prizes.

The bright things of life are not all gold lined, the brightest of them all is contentment.

When choosing eggs for hatching select well-formed eggs of medium size. Dirty eggs should not be used.

Night caps for poultry, to protect their combs from the frost in winter, are amongst the latest things in fowl millinery.

Patient, continuous perseverance wins its own reward, when properly directed in some channel where prosperity is possible.

Do not imagine that you can cast the seed in the ground and leave it to its own future, for if you do your harvest will be weeds.

The Toulouse Goose is a prime favorite for general purpose uses. More of them are kept for regular work than any other kind.

That like produces like is alas too true; for example, see some of the scrub poultry that is so much in evidence as we travel about.

Variety of diet helps digestion, and a change of food at every meal during the day will keep the chicks growing and make the hens lay.

A dust bath is the best remedy for lice. A shallow box full of dry dust should be kept in every poultry house, both winter and summer, and should be often renewed.

A little vinegar in the boiling water will gather the eggs, though not entirely fresh when poached. Too much will taste in the egg cooked. A tablespoonful of vinegar to two quarts of water is sufficient.

When placed in water fresh eggs go to the bottom, bad eggs go to the top, otherwise toward the top in accordance to their age. The larger the air cell the older the egg, and the higher will it float in the water.

Broken shells or frozen eggs in the nest teach hens the bad habit of egg eating. Once acquired it is most difficult to cure them. Look sharp after this to prevent the hens becoming familiar with the unprofitable habit.

Russia, the coldest country, grows a large number of chickens, turkeys, ducks, and geese. Many of these and a large number of eggs are sent to Berlin for sale. The children herd the geese and ducks during the summer months.

The most important trio in poultry today is first, to devise means whereby more of the eggs put to incubate will hatch; second, how to grow more chicks to maturity; and third, how to increase the egg yield in chickens, turkeys, ducks and geese.

When broken into a saucer the yolk of a fresh egg stands up round and plump. The older the egg the flatter will the yolk be in the saucer. Stale eggs run together, and the white and yolk may join. The fresher the eggs the more clear and transparent will be the white. In stale eggs the white becomes yellowish in color.

PARTRIDGE WYANDOTTES

ARE WITHOUT DOUBT THE COMING BREED

Many of our leading fanciers have started in to breed them this season, which is one of the proofs of the above assertion.

For **beauty** and **utility** they have no superiors, and when reliable stock is obtained they breed true to **color** and markings, and are the breed that a new beginner should start with as well as the experienced fancier. They are also the **poor man's friend**, as they will fill the egg basket, if properly fed, when eggs bring the highest prices.

Eggs are very fertile at this season of the year, and many **prize winners** are hatched during the months of June and July; so send in your egg orders at once. They will cost you $5 per 15; $8 per 30; $10 per 45.

In order to make room for **growing chicks** I will sell 200 **exhibition and breeding birds** at **half price**, a part of which will be delivered immediately and the balance after July 1. Remember, my birds won the **lion's share** of the most coveted prizes at the **largest shows** last season, and that both my prices and quality are right.

Brockton, Mass.

tf

BROWN'S BUDGET

The fact that the annual product of the American pen excels any other one agricultural crop should stimulate the laggards in the poultry business to activity, to secure a portion of the big amount paid for poultry products.

When a man begins to cross his breeds it is only a matter of time, and brief at that, before he will lose interest in his flock. In evolving many of the breeds every practical consideration toward utility improvement has been observed. Let well enough alone.

Close observation is very valuable in the poultry yard. It will soon enable one to detect healthy conditions or disease indications. Early attention to the ailments of fowls is the only proper method of "doctoring." When any poultry disease has become established, it is economy to use the hatchet, for such specimens are difficult to cure, and if cured should never be used as breeders.

An exchange pays the following tribute to the hen: "Eggs are always cash. They are ready for market the minute laid, and the sooner they get to market the better. Nothing that the farm produces sells as readily. They require no cultivation, pruning, churning or harvesting, but are at once in salable condition. With plenty of eggs on the farm there are a host of good things in the kitchen and money in the family purse. Gathering up eggs is like picking up dimes and dollars. Great is the hen that produces them. When everything is dull in winter the egg basket has wonderfully helped out many a poor farmer. The crops may be poor, the provisions low, the family cow dry, with a long wait for the next growing season, but the hen comes up smiling and is ready to get a pound of tea or a sack of flour. If treated well she will respond as readily when the snow is on the ground as when the fields are green. She is a friend to the poor and rich alike."

The dust bath is more necessary in hot weather that at any other season. The road dust during a protracted dry time is pulverized just right for the poultry dust bath. Secure a supply, and place it in a shady spot, under shelter, and note how the hens patronize it. All sitting hens should have access to a good dust bath.

The hens that have free opportunity to roam will balance their ration pretty well no matter what food is provided them. Advice is often given that hens on the farm that have free range do not need other food than what they can find. Such might possibly be the case if the flock is very small, and the "run" better than the average. It is safer and more humane to feed twice a day if but a little, and by such a method only can flocks be made to pay. No domestic animal will bring profitable returns if compelled to shift for itself.

The poultry business requires head work as well as hand work. Everything should be thoroughly done. Timely attention will prevent many troubles. There is no tomorrow in the care of poultry; it is the Now that counts all the time.

"There is more in the feed than the breed," says an authority. That may be so, but the feed will get in the breed in due time.

A man writes: "Where can I get good Crevecœurs?" Why is it this breed is not raised more extensively? They are good layers, eggs fine in size. In this connection it might be asked why are crested breeds apparently more sucessfully raised in Canada than in the United States? It would seem that climatic conditions are more favorable in the States.

Look out for sudden thunder showers when you have a number of broods cooped with hens. See that the coops are situated so water can not run in them. If they are located on a slope make gutters around the back—the coops should face down hill, so the water will pass off without damage.

I find some ancient advice in an old poultry book (1845) that still holds good: "It is best to entrust the management of fowls to some trusty person who can be depended upon; and no other person, except the keeper, whom the fowls know, and the voice and sight of whom rejoice them, must go into the hen house, for fear of scaring or disturbing the hens busied in laying."

"In the mythology of the ancients," says Main, "the cock was the symbol of vigilance. Polytheism consecrated it to Minerva and Mercury: it was offered to Aesculapius, the God of Medicine, on recovering from illness. The Romans used to keep sacred pullets, and they undertook nothing of consequence before they had consulted the auspices of this prophetic fowl. Its meals were solemn omens, which regulated the conduct of the senate and the armies."

Billups says he started in poultry without capital. Borrowed a dozen eggs from a neighbor, and borrowed a sitting hen from another. Hatched ten chicks, kept the hen until she weaned the chicks and laid enough eggs to repay the man who loaned the eggs, and then returned the hen. Bill Tomsin said when he told him, "Billups, that was a regular frenzied chicken trust. Lawson ain't in it with your schemes." "Yep," said Billups, "I ain't a darn fool always, law's on my side sometimes."

"Damaged grain, good chicken feed," was a head line I recently saw in an ad. Don't touch it at any price. Quality is what you want in food for poultry. The reason why "screenings" sometimes apparently produce beneficial results in feeding, is because they help to furnish the much needed bulk of a less concentrated nature to properly balance too strong a grain diet.

June essentials for growing chicks: clean coops; sanitary shade; some sunshine; feed varied diet, little and often, when closely yarded; keep drinking water in shade; have grit and charcoal accessible; don't crowd; if chicks of different ages run together, have a feeding pen for smaller ones so older ones can not torment them. Good treatment helps as much as food.

A story going the rounds of the press tells of a lisping little girl at a country store who brought in a hen's egg and bought with it a couple of darning needles, and then informed the groceryman, "Ma says, the black hen is on the nest, and she will soon send me for a thenth worth of needles to sew with." Years ago the writer clerked in a country general store in western New York, and traded goods for eggs. Many farmers bought all their groceries and tobacco with eggs. Sometimes the eggs were only worth a "sixpence" a dozen—four dozen for a quarter (25 cents); then it took a big basket to bring the eggs in to get a small basket of groceries. Often it took two dozen eggs to buy one pound of sugar. Farmers didn't complain for wheat was two dollars per bushel. Eggs are always cash everywhere.

ROSE COMB RHODE ISLAND RED

ODDS & ENDS

This is the little chick season and the question of proper food for chicks assumes great importance. Spratt's Patent Chick Meal is a cooked food and therefore easily digested. It can be fed dry or made crumbly moist with milk, water, broth, soup or anything of that kind. The fact that it is easily digested prevents bowel trouble and reduces to a minimum the percentage of mortality, besides which it makes the little chicks grow like weeds.

The illustration of the Wyandotte on our cover page is one of the best made by Artist Schilling. This belongs to the American Agriculturist who loaned it to us for use in the paper.

The many friends and patrons of Thomas H. Telford will be sorry to learn of his death at his home in Petersburg, Ill., April 20, 1905. Mrs. Telford, who has had much practical experience in assisting her husband in bantam breeding, will keep up the business for the benefit of old and new patrons.

We were reminded the other day of the flocks of beautiful dark Brahmas that were formerly grown by the late Charles A. Sweet, of Buffalo, and Mr. Newton Adams, of Utica, N. Y. Why cannot such men as these return and breed these high quality specimens that are the most beautiful in the show room and the most profitable egg producers of all our poultry?

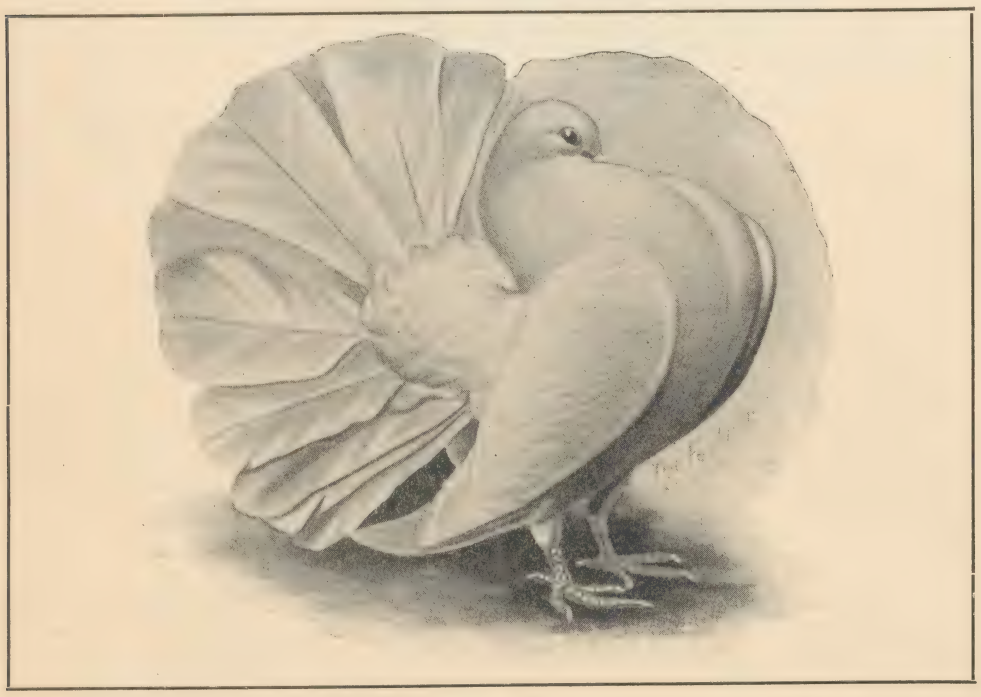
The best protection from hawks and foxes is a Collie dog that has been taught to drive them away. We have one at Elmwood that will not even allow a crow or black bird to light in a tree on the farm, and will kill a fox or a skunk on sight.

DATES CLAIMED

Sept. 25 to 29.—Trenton, N. J. Trenton Inter-State Fair. Walter S. Gladney, Jr., Secy., Atlantic City, N. J.

Jan. 15 to 20.—Oshkosh, Wis. Wisconsin State Poultry Association. McClove, Judge. Frank W. Radford, Sec.

Sept. 5 to 8.—Cambridge, N. Y. Andrew Riddell, Supt. Poultry.



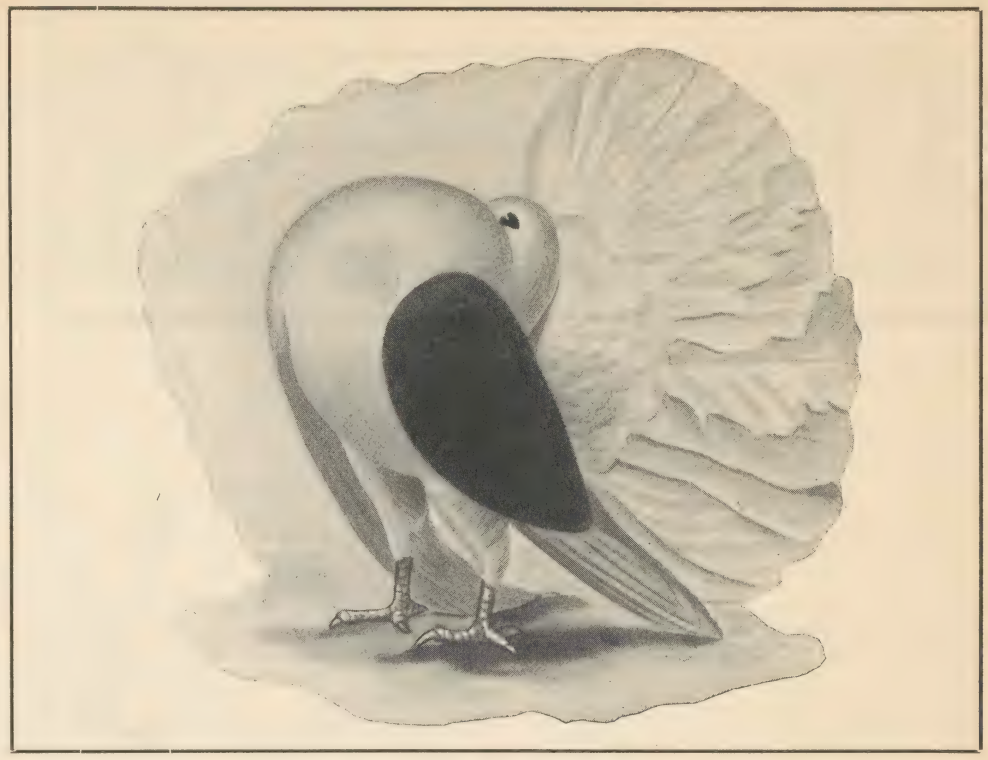
Sept. 11 to 16.—Syracuse, N. Y. New York State Fair. J. D. Jacquins, Supt.

Oct. 3 to 6.—Lynchburg, Va. Frank A. Lovelock, Sec.

PIGEONS

Fantail Pigeons

For the beginner nothing could be more attractive and desirous than the Fantail pigeons. The white variety is the most popular of all these. Those who read of the prices paid for exhibiting specimens in the large shows imagine that the exhibition Fantail must be an unusual kind of a pigeon. The facts are that there are but few of these very high-class specimens that have the large full tails properly carried and spread, with the head thrown well back towards the tail, and with that nervous motion we hear so much about. These exquisitely fine specimens might be classed among the pigeons as are the $50,000 horses and the $10,000 cows among their kind, an unusual feature that is only an accident, perchance, rather than an usual happening. The white, the red, the yellow and the black are all very attractive. Fairly good breeding pairs of these can be secured for from $3 to $5, the higher price bringing better quality in size, shape, color and tail formation.



FANTAIL

One desiring to keep Fantails, by the investment of twenty dollars could secure one good pair each of these four colors, and from them could, in a year, perhaps, produce ten or twelve pairs of sufficient quality to sell or add to their loft. Start in with a determination to use for pot pie (or pigeon pie) all the poor quality specimens. Never keep anything in your loft that is not of the best. In this way you gain a reputation from those who visit your loft; but as surely as any one visits your loft, and sees one-half or more of your stock in poor condition, he does not form a favorable impression.

Those who succeed best in growing all kinds of pigeons for exhibition or the fancy are those who select closely, carefully mate those that they keep, feed and care for their stock in the best manner, and never over-crowd their lofts. The ruling principle in all this is the careful selection of the best, discarding the poor quality. If the people would eat up all the inferior birds, it would largely increase the value of the better quality, and the whole fancy would make more money. The over-powering desire to sell the surplus stock for something, and to state, "We offer you one pair of young birds, bred from the same stock that won at a Crystal Palace show," scatters through the country poor pigeons that should have been consumed at the family table. Ten pair of pigeons, kept till six or seven months old and sold for $2 apiece only brings you twenty dollars, whereas, if those ten pairs had been eaten up at the value of twenty cents apiece, and one fine pair had room to grow and mature to a value of $20, you would have made four dollars more than you would have made through keeping and selling the cheaper quality.

The country is overloaded with poor pigeons. If they were all of a kind that might be profitably sold for squabs, or for any merchantable purpose, they could be gotten rid of; but as long as this cannot be done, and people try to sell them for breeding stock, the real value of the pigeons will be kept at a low ebb. If there was a grand movement toward culling out all the poor, inferior specimens of every kind, and eating them or selling them to the restaurants for food, the value of those remaining would soon advance so as to make the sales of pigeons much more profitable than at the present time.

When you select the Fantails as your pride, have good ones, keep them nicely, care for them so the squabs will grow to fine, vigorous specimens, cull out and eat all that are not of a valuable nature, and you will build up a reputation for yourself that will surprise you in a few years. But as sure as you neglect this, keep all you hatch, and imagine that they are worth something, you will be disappointed, for seldom, if ever, do people care to purchase at more than a dollar or two a pair from anyone whose loft is full of inferior birds, imagining that their equal is in every quality of producers; but, if they go into a loft and see all good ones, the opinion is the reverse, and they do not object to paying a fairly good price for what they purchase. The earlier the fancier learns this lesson, the more profitable will the keeping of pigeons be to him.

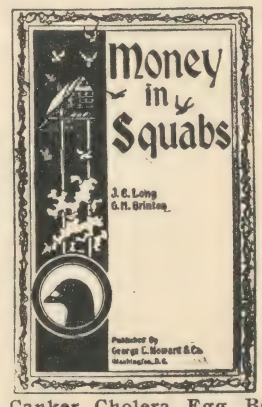
BLACK SADDLEBACK FANTAIL

Pigeon Notes

When raising pigeons — especially squabs—for market, do not take any stock in the statements that each pair will raise twenty-four squabs during the year. A pair of squab producers that will produce an average of six pair per year have done mighty well. Fancy pigeons that grow the exhibition stock usually round up with about three or four pair a season. When a pair of pigeons have grown twelve squabs in a year, they have produced six times their own weight, which is a pretty good active business for such small birds.

Feed a number of different kinds of small grain to your pigeons. When they fly about they pick up seeds and grain, and everything of this kind that they can find to eat. It is true that their main support should be good, sound, dry wheat and cracked corn. Some Canada peas can be added to this, and after that a very little hemp seed, some Kaffir corn, a little barley—not much of this, for all grain with husks is bad for feeding the young pigeons, but give them any kind of good solid grain without husks. A little bit of millet seed and some hulled oats is good, but not much of this. With this furnish plenty of fresh water for drinking, some crushed oyster shell, some grit and a little rock salt. Just why people feed so much rock salt we cannot understand.

When we kept pigeons a number of years ago, we discarded the salt cat entirely, and nailed a piece of salt fish against the side of the house. For some three years we never gave our pigeons a bit of salt other than this, and we never had any canker in our loft after doing away with the salt. Can it be possible that too much rock salt is being used and causing canker? We all know that salt thrown upon ice in winter will cause diphtheria when the ice begins to melt a little. Let the best members of the fancy experiment a little on this salt cat, and discover whether or not it is so important to the pigeon fancy.



Do not imagine that you can start in the squab or pigeon business simply through the purchase of the birds; you must learn how to care for, feed and breed them. No one ever knows too much about it; and as long as there are so many hundreds of fine young squabs dying in the nest from canker that are kept and reared in nice clean lofts, there is something wrong with the management that had better be discovered. We do not believe that it all comes from inbreeding, or from being passed down from one to another. Find out if too much rock salt has not something to do with it. Why should pigeons be the only birds in the world to be dosed with rock salt?

If you have a fine pair of pigeons that will not raise their young, try and have a pair of fine Homers that are good feeders and that will lay the same time as your other pigeons, or within a day or two of the same time. Transfer the eggs of the fine pair to the pair of feeding Homers, and see if they do not raise you fine squabs.

Prize Winning PIGMY POUTERS,
BALD HEAD TUMBLERS.
Best stock in America.
A few birds for sale. tf
C. E. SCHOFIELD,
1236 Potomac St. N.W., Washington, D. C.

SQUABS sell for $2.50 to $6.00 a doz.; hotels and restaurants charge 75 cents to $1.50 an order (serving one squab). There is good money breeding them; a flock makes country life pay handsomely. Squabs are raised in ONE MONTH; a woman can do all the work. No mixing feed, no night labor, no young stock to attend, parent birds do this. Send for our FREE BOOK, "How to Make Money with Squabs," and learn this rich industry.
PLYMOUTH ROCK SQUAB COMPANY,
334 Howard St., Melrose, Mass.

MONEY IN SQUABS.

The most interesting and the only practical book published on raising squabs for market, is my book entitled "Money in Squabs." This book has had a most generous sale during the past years, and contains the following: Introductory, Breeding Houses, Breeding Stock, Distinguishing Sex, Food and Feeding, Water, Salt, Nesting Material, Manure, Breeding and Management, Dressing Squabs for Market, Shipping and Selling, Diseases of Pigeons—Canker, Cholera, Egg Bound Enteritis, Going Light, Roup, Small Pox, Sudden Colds, Wing Disease, Worms—and Douglas Mixture. Some of the illustrations are: Full-page drawings of Homers, Runts, Dragoons, and Duchesse Pigeons, Plans of Single, Double, and Continuous Houses for Breeding Squabs, Arrangement of Aviaries to a Garret Room and to a Barn, Plans for Building a House in the Back Yard, Plans of Nests, Perches, Mating-Boxes, Bath-Tubs, Drinking-Fountains, etc. Price 50c.

BOYER'S TALK

TABLE POULTRY

A scrub fowl is not even reliable for market purposes.

It is said that in France some poultrymen mix spices and herbs with the food for fattening poultry, in order to impart a delicious flavor to the meat.

Never ship poultry to a strange commission house without first looking up their standing. Always carefully inspect your shipment before closing the box, and place in it a memorandum showing the count and other data. Keep a duplicate of this for future reference.

An experienced poultryman gives this wholesome advice: Don't chase off into a new market with untried people just because of a possible temporary advantage. Nine times out of ten you will lose. Keep in touch with a good house in several markets, and use judgment in shipping to any of them. Watch the reports and forecasts, and then allow for weather changes.

The man who is trying to raise broliers on a free range, will see his mistake after his experience has cost him a loss in both time and money.

Dry-picked poultry will stand longer shipments than will scalded stock.

An over-fat fowl is never an attractive carcass, and generally hard to sell in market.

By having one breed only, the market poultryman is able to ship stock to market that is uniform in both size and color. A uniform shipment is attractive to the eye, and will command more ready sale.

James Rankin says he never sold a broiler in his life. He thinks raising roasters for market is more profitable, and uses the argument that as the broiler age is just the time when all the danger of mortality has passed, he can put on the last two or three pounds much cheaper than he can the first. Mr. Rankin holds his chickens until they are four and a half months old, and his pullets until they are a little over a year old.

The best table fowl is the one which has the heaviest weight of meat on those portions of the body which are favorite cuts. The breast and thighs should be heavy. The bird that exercises and is continually busy always proves to be the best for table use, for its work renders the muscles of the legs and breast firm and fine, instead of leaving them flabby and full of loose tissues in the shape of fat.

THE EGG BUSINESS

Playing tricks upon egg customers is costly.

Make it a rule to market all the eggs on hand each week.

The double-yolked egg is not a case for rejoicing. Look after the condition of the feed, as there is danger of it being of a too-fattening nature.

It is indeed unfortunate that there is so much prejudice in the market for color of egg. Food alone flavors the egg, the coloring matter that adds color to the shell playing no part whatever.

Honesty is the very best policy for the egg farmer to pursue. Carelessness in this business is almost equal to dishonesty.

Hot weather has the same effect upon the egg crop as has cold.

The man who will hold eggs for better prices, may be honest in all things but the egg business. The public pays for fresh eggs and should have them.

We make it a rule to gather the eggs several times a day when not using the trap nests. This prevents breakage of eggs in the nest, and keeps them in a better condition.

Heavy layers are not as a rule in good killing condition. The hen can not produce fat so well when laying as she can when taking her rest.

One grand thing about the egg crop is that it is ready for market the moment laid.

We agree with W. B. German, that the hen that will average fifteen eggs per month, for the entire year, is "a gem regardless of pedigree." We will go even better: the hen that will lay 150 eggs a year is a better bird—all things considered—than the 200-egg layer.

In a grocer's window on the east side were two lots of eggs, says Rural New-Yorker. One was labeled "Long-island Eggs, 20 for 25 cents," the other, "Leghorn Eggs, 15 for 25 cents." Evidently, there is considered to be a difference in eggs, even on the democratic east side. The origin of the former might be a little more apparent if the name were properly separated and capitalized. It is said that ten times as many Long Island eggs are sold in New York every year as are produced on that island.

I. K. Felch thinks eggs should be weighed to determine the record. That might be so if eggs sold by weight, but so long as the price is the same, per egg, for both large and small, there is no incentive for anything but numbers. We do not believe that the time will ever come when eggs will be sold by weight. For fully twenty years the writer has argued this cause, and yet year after year we are no nearer this needed reform than we were twenty years ago.

WHAT AND HOW TO FEED

For fattening purposes, and furnishing heat during cold weather, we have no grain superior to corn.

For egg production, and bone and muscle forming, wheat and oats, and their by-products bran, middlings and oatmeal, take the lead. There is too much waste in wheat screenings to make it a good poultry food. Better pay double the amount for good, sound wheat. In feeding sunflower seed, about a quart to thirty fowls is considered the proper allowance. American poultrymen do not, as a rule, think much of buckwheat as a poultry grain, preferring wheat, oats and corn in the order named. Buckwheat is a very fattening grain.

The different parts of ordinary market bones, upon analysis, were found to contain in abundance the ingredients which go to make up the growing chick, and in wonderfully close proportion the different parts of the complete egg, says Farm and Home. The lean meat and gristle form the white of the egg and about 16 per cent of the yolk. The marrow and other fat on the bones supply the remainder of the yolk. The lime phosphates in the bones yield all the necessary lime salts for the shell and the requisite phosphates for the interior of the egg.

Aside from being a good food, sunflower seed is a medicine or a tonic. It is rich in oil, producing a red head gear and a fine luster to the plumage. Oats for muscle and wheat for feather. Bone-meal is an excellent feather maker.

"A feast today and a famine tomorrow" will cause more loss in the poultry yard than any care that we could name.

To keep a hen in good condition for laying, she should never be allowed to have a full crop during the daytime.

It is wonderful how the hen can detect the smallest seed on the ground, and how she will inspect every inch of surface.

Linseed meal is a valuable addition to the bill of fare. A gill of it contains more bone-forming matter than a pint and a half of corn, and as much nitrogen as three gills of corn.

The price paid for it in the market does not set the basis of cheapness when buying food. But rather that which gives the best results in both eggs or meat, regardless of the cost. It is not what we pay, but what we have left after we have paid, that settles the question of cheapness and profits. We must measure and estimate by the product.

AILMENTS AND REMEDIES

It should be the aim of every poultryman to both breed and feed for health.

Idleness is a breeder of disease. Discourage it on the farm.

All dead fowls should be either cremated or burried deep.

In the introduction of new blood to your flock, be sure that what you purchase is not only in a healthful state, but springs from healthful ancestors.

A fowl never droops unless something ails it. There are many reasons: overfat, liver troubles, lice, indigestion, or a cold. Examine her carefully.

Dr. P. T. Woods once said that there are few, if any, poultry diseases that are not preventable, and we see the logic of this more every day.

The safest rule is never to use a fowl in the breeding pen that once had a contagious disease. The majority of cases of contagion are only apparently cured, and the constitution is left weak. Such a condition cannot produce strong and vigorous offspring.

The healthy fowl cannot be mistaken. A bright eye, a red comb, smooth, bright, well-kept plumage, activity, and a keen appetite are alone associated with a fowl that is healthy.

The judicious use of the axe is better economy than hours spent in trying to cure a bad case of disease. As we have said before attend to the slight ailments, nip the disease in the bud, and there will be no further trouble.

An unknown writer recommends feeding liberally on stewed garlic for worms in fowls. He advises keeping the hen from food for twenty-four to thirty-six hours, and then give a light feed of stewed garlic cut in small pieces.

The causes for diarrhoea are many: overfat, filthy water, improper feeding, irregular feeding, exposure to inclement weather, lack of grit, a chill, indigestible food, half-cooked food, or too much bran in food.

Dr. N. W. Sanborn says giving generous feeds of cracked corn at night sometimes impacts the crop. The bird eats all she can, goes to the drinking vessel several times, and then to the roost. The moisture swells the corn, the crop is enlarged to the greatest extent and impaction sometimes follows.

The ailments of poultry are in the majority of cases identical with those of the human family, the treatment being about the same. Inflammation is a common cause.

NOTES IN PASSING

The man who keeps fifty hens where twenty-five would scarcely be comfortable is springing a big leak in his ship.

There is no better trouble preventive in the poultry yard than cleanliness.

Here is a fact briefly stated: Quality brings best prices, but feed will not give quality unless the breed is used to utilize food to the best advantage.

Change the water often. If it becomes heated and putrid it is apt to nauseate the fowls and occasion illness among the flock.

Earth floors in the hen house should always be a foot or more higher than the surface of the ground on which the poultry house is placed. This will insure dryness.

The bulk of failures are traceable to mismanagement.

PLYMOUTH ROCKS.

Chance of a Life Time. Millville Poultry Farm Company will discontinue breeding poultry for show purposes, and in future will devote its entire capacity to producing chickens and ducks for market. We will sell you any prize winner or breeding bird in our possession for 50 per cent of its true worth. This sale includes all our winners at St. Louis, New York, Boston, and at other leading shows, as well as cream of stock bred from these winners. This sale positively closes July 10th. Any old birds remaining unsold at that time will be carried over until October, when we will hold a sale of cream of our 1905 hatched youngsters, and balance of old stock. Eggs from all prize matings half price during June. Broiler eggs $6.00 per 100; $50.00 per 1,000 during June. Positively no shipments made between July 10th and October 10th, as Mr. Delano closes his connection with our farm on July 10th, but will return October 10th to conduct a sale for one month in the fall. Orders booked for October delivery at any time. Prompt buyers will procure the plums. Prices quoted on single birds, pairs, pen, or entire flocks of any one variety. We offer you the best in America in Barred, Buff and White Plymouth Rocks, Buff and White Wyandottes, and Pekin Ducks, and at prices you will pay. MILLVILLE POULTRY FARM CO., Maurice F. Delano, President, Millville, N. J. 22-tf

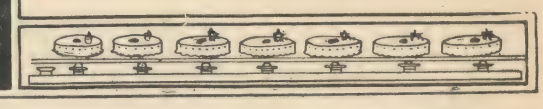
J. L. PURPLE
tf COLUMBIA, PA.

A Paper Incubator.



150 Egg Capacity.
Weight, 80 Pounds.

HENS SECRET DISCOVERED

This Incubator is a Wonder and the Leader of All Incubators.
Does not require an expert to get a successful hatch.

Made of Paper—the World's best-known Non-Conductor.
As strong and durable as wood.

TESTED. SUCCESSFUL. PRACTICAL. GUARANTEED.

Will heat up in any outside shed in zero weather in one hour, and will use from 50 to 75 per cent less oil than any other incubator on the market.

No even temperature necessary; any temperature between 95° and 106°, like the hen's, will secure a 90 to 100 per cent hatch of fertile eggs.

Our Regulator is tons of air and an even heat not necerrary.

Our Brooders—on the market for the past seven years—have demonstrated to the most exacting that they can raise in them 95 to 100 per cent of chicks.

A Perfect Brooder.
Joliet, Ill., May 20, '04.
Your two other brooders arrived O. K. and we thank you for your prompt shipment. We have used your brooders for three years, and we must say that they are perfect in every respect. We have found you honest in all our dealings with eggs and brooders.
I am respectfully,
Miss Maggie Anderson.

Young's Strain S. C. W. Leghorns

I Have No Other Breeds

My strain, again for the 5th consecutive year, shows its superiority by winning more prizes at Madison Square Garden, New York, than all others combined, including cup, medal and four specials. Two weeks later I showed at Boston against the most prominent breeders of the East, winning nine prizes on nine entries over birds that won 1st at St. Louis.

I showed 2 Cocks, won 1st, 2d; I showed 2 Hens, won 1st, 2d
I showed 2 Ckrls., won 1st, 2d; I showed 2 P'l'ts, won 1st, 2d
I showed 1 Breeding Pen, won 1st

Also four specials. This record has never been equaled by any other breed or breeder in America. Stock for sale at all times. Eggs $3 00 per 15; $15.00 per 100. Address 44

The American Fancier

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV | Washington, D. C., June 17, 1905 | No. 612

A Visit to a Poultry Farm

On April 16 I visited the Abigaile Adams Poultry Farm, so ably managed by Edgar Briggs, and thinking the readers of the American Fancier would be interested, I took a few notes.

Irvington is a pretty little town, overlooking the Hudson, on the line of N. Y. C. & H. R. R. R., about one hour's ride from New York, and it is twenty minutes walk from the station to Briggs's place.

On arriving there I beheld a sight that makes every true fancier feel fine—a place of about eight acres, with plenty of shade and grass, with the poultry houses placed in the most convenient places.

Mr. Briggs has two brooder houses, each about 12x40 feet, one for chicks and the other for ducks. The first has about two hundred chicks, ranging from two days to two months old, as fine a lot of White Wyandotte chicks as I ever saw. This house is heated by the pipe system, and Mr. Briggs informed me that this manner of heating is very satisfactory. A large loft, filled with straw, absorbs the little moisture, rising from below, while in the front, large windows let in plenty of light and air. The whole house is double boarded, and is in fact as fine a brooder house as can be found. The duck house is the same, except in the manner of heating, which is done by Cyphers sectional brooders.

Mr. Briggs has about two hundred young chicks and wintered about thirty-five breeders, including his New York winners. Two drakes and about a dozen females attracted our attention; they were very large, pure, white and correct shape.

The White Wyandotte breeders looked fine. Pen 1 is headed by fourth New York cockerel, and he looks as though he could do even better next time. The hens are of large size, yet not coarse as large birds are apt to be, pure white with the fine shape which characterizes this strain. Pen 2 is fully as good as No. 1, and winners will no doubt be produced from both. There are also about six other pens that are very good and contain some nice birds.

Around the place are about twenty-five broods of chicks, each with its Wyandotte mother. Each hen had a large brood of strong healthy chicks, which speaks well of the White Wyandottes as mothers.

The incubator cellar is built in the hill and contains five large and small Cyphers and one special duck machine. The temperature in the cellar is very even and is just the place for the purpose.

Yet with such a place as this Mr. Briggs says he must move the business to a larger farm where he can better attend to the wants of his customers.—HERBERT B. ROWEDDEN.

"What is the matter with the old hen," asked some of the neighbors of the maiden lady who kept a large flock for the production of eggs for market. "Oh!" she replied, "that hen of mine never lays eggs during the egg-nogg season."

Telegony

Many inquiries have come to the office with reference to the possibilities of intermingling or destroying the purity of the blood of several kinds of fowls that live together the entire winter and are then separated into different pens in the spring. This question has been considered by some of the greatest scientists, all of whom agree that telegony does not have any influence in the offspring.

Bees, poultry, rabbits and guinea pigs have been largely used in these experiments, as results are more quickly obtained with these than with any other kind of animals or fowls. The bee growers have been more than interested in this, and have exhausted all experiments; and they seem to be thoroughly convinced that there is no danger of the association of different kinds of bees having any influence over the offspring of a well-regulated hive.

In poultry one of the most rigid experiments was made with Light Brahmas and Brown Leghorns. Two hundred of these were permitted to run together for six months of the year; all were separated into different pens the beginning of the spring, and record of the results kept. After two weeks of separation, the eggs were saved and hatched. Not one of the Leghorns hatched from these eggs showed even a trace of feathers on their legs, and the Brahmas were as pure as any Brahma ever met with.

Experiments have been made with horses, jacks, zebras and quagga. After experimenting with these, some claim that there might have been a possible trace of influence, but one of those having the most experience states as follows: "The strong probability then is, that in all cases telegony has seemed to be proved. The facts could be explained either by taint in the blood of the female, or else by the principles of atavism. This last is the explanation offered by Professor Ewart, of the stripes which showed in the colts bred by Lord Morton."

The writer made a number of experiments in early days, with white French poodles, the females of which were crossed with mongrel blood. The same females again gave birth to litters that were as pure and true to the mother as any ever raised. This same principle and experiment was tried with all kinds of poultry, both smooth and feather-legged, and no taint ever showed in any of the off-spring after complete separation.

BARRED PLYMOUTH ROCK

Proper Food for Squabs

A pair of young squabs will grow from less than a half an ounce in weight to twelve or fourteen ounces in four weeks. This is gaining a half ounce each day. Consider the amount of food that must be consumed and assimilated to make this growth. If this does not teach you that poor shriveled grain is worse than nothing for the growing squab, nothing will.

A Letter from Mr. Orr

Editor American Fancier:

Though I have previously written your Mr. McGrew that I would not answer any attacks that have been made on me or any insinuating remarks that have or will be made, still I cannot remain silent after reading the current issue of the Reliable Poultry Journal, not as for myself but in defense of Mr. T. E. Orr, regarding the place for holding the special meeting (Pittsburg).

The editorial in question is entitled: "When Lawyers Disagree It's Time to Pay Our Debts." I will quote part of article, the part which I refer to is "Messrs. D. Lincoln and T. E. Orr as president and secretary of the association considered the advisability of holding this meeting somewhere in Ohio for the reason that Ohio is centrally located; but the idea was abandoned by them on account of a belief or fear, *entertained by the present secretary-treasurer* (italics my own) of the association, Mr. T. E. Orr, that Nitsky Bros., on learning of the meeting to be held in Ohio might at once begin suit to collect the $560 above referred to, and cause a summons to be served either on the president or secretary-treasurer of the association, which summons would have to be obeyed with the result that one or the other of these officers would be taken into court to show cause why the American Poultry Association should not have judgment entered against it for the amount claimed by Messrs. Nitsky Bros., in payment for Standards of Perfection delivered by them to the association's accredited representatives. To avoid this contingency the special meeting was called for Pittsburgh." Now I want to say that the above paragraph taken from the June issue, 1905, is a lie pure and simple, and if Mr. Curtis's other statements do not contain more truth than is in the above quotation, I feel sorry for the readers of the R. P. J. I will not contradict anything that might and has been said about me that I know is wrong, I have no time and do not expect to worry the least, but when a deliberate downright falsehood is pushed on the market as truth against an innocent party then I'll rise and try at least to tell the truth.

Regarding the place of meeting, will say that Mr. T. E. Orr wanted me to call the meeting for an Ohio city, please remember in an Ohio city, and I told Mr. Drevenstedt on the cars when returning from our last Buffalo meeting that Tom wanted me to call the meeting for, I think, Columbus, but I would not listen to his remarks on the place of meeting and the fear of a court summons did not enter into my head. I alone am responsible for the place and time of meeting.

I can conceive of no motive why this article in the R. P. J. concerning the part I have quoted other than the fact that it was written to get votes away from Cincinnati. Furthermore, I have voted for Cincinnati and wrote Mr. Crawford to that effect before the R. P. J. for June was received and I hope that all who have not voted will vote for Cincinnati and let

us prove that at least we are not afraid to go there.

Stick to the truth, Mr. Curtis, and when you do not know it, don't guess or make a false statement.

Now then, all aboard for Cincinnati, and let's have a rousing good meeting. Some may stay at home thinking if things don't go their way all they have to do is to get five members of the executive committee to sign a call and there you are, a special meeting. The president will have to call the meeting whether or no. We won't say anything more about that?

I am sorry to be compelled to answer Mr. Curtis and show that he is utterly mistaken in his remarks in regard to the place for special meeting but "necessity knows no law;" hence this letter. There are other statements that are false that I can prove, but what's the use.

D. Lincoln Orr.

Chicken Cholera

As the warm weather approaches many of the young chicks show signs of the summer ailments which lead to cholera. We are therefore tempted to speak a few words in favor of the only preventive of all these troubles. Filthy surroundings and improper feeding are the cause of the greater part of these diseases. Flocks that are properly fed and cared for are not likely to be affected by these ailments. There is no absolute way to prevent diseases as long as the germs find a hiding place on the premises. If perfect cleanliness is the rule there will be much less trouble than where careless methods are applied.

If your flock is attacked with genuine hen cholera there is but little chance to cure them unless the most rigid rules are enforced of cleanliness, careful feeding, and a destruction of all the sick with the subsequent burning of all the carcasses.

The first symptom the chick displays is walking slowly around and hunting for a corner to hide in, with watery yellowish discharge which looks like a mixture of yellow ocher and water. This is followed with very light coloring of the comb, face and wattles, and in a short time the chick lays over without strength enough to rise and dies on the spot.

There are many treatments recommended. We copy from a Western exchange the following, which is said to have been quite successful in that locality. First of all thoroughy wash all the water dishes with lime and water. Then mix one teaspoonful of camphor and one-fourth ounce of sulpho-carbonate of zinc. This mixture of camphor and zinc is highly recommended. The same benefits may be gained by tying gum camphor in a cloth with a piece of stone to sink it to the bottom and keep this in the drinking water. One of the best absorbents is dry earth sprinkled about where the sick fowls have been. A mixture of two drams pulverized camphor, one dram of pulverized rhubarb and one-half dram pulverized opium made into sixty pills, one of these administered three times a day, is almost an absolute cure for any case of chicken cholera that can be cured. But best of all is the preventive that comes through perfect cleanliness

Baths for Pigeons

Provide plenty of bathing room for the pigeons. They can not have too much of this. Keep the baths always, during the weather when the water will not freeze, nar at hand where the pigeons can bathe as often as they wish. Renew the water frequently so as to keep the bath pan perfectly clean that it may be fit for both drinking and bathing.

Brown's Budget

Brood coops that have no floors, in damp weather are sources of trouble. Cramps, rheumatism, bad bowels, colds, etc., can readily be traced to this source. The proper way to use floorless coops is to keep a liberal supply of clean, dry sand or road dust and use it plentifully in the coops. Frequently remove all the sand or dust and replenish with fresh. If dust is used it is worth while to carefully save all the cleanings as they are especially valuable as fertilizer for most all kinds of plants, especially corn.

Have you gotten everything in shipshape readiness for the hot weather campaign about to begin? Remember that an ounce of prevention is worth pounds of reform methods and remedies. Also bear in mind nearly all hot weather troubles result from neglect.

Summer time is the season to decrease the rations of the fowls and provide food of a less heating nature than corn. Even with the difference in price of wheat over corn, wheat as an alternate food is economical. Boiled oats are also excellent, both for fowls and good sized chicks—those over ten weeks old.

Gapes, that dreadful pest of the chicks, the mystery of mysteries, still flourishes, notwithstanding all the sure cures and preventives. I recently counted the "sure cures for gapes" remedies and found I had nineteen, counting the "reasons" that cause gapes; there are scores. The gapes question is a subject for the experts in our experiment stations to wrestle with. The average poultryman has neither time nor means to spend in a scientific direction, however much inclined they may be that way. We want to know the source or origin of the gapes worm, and an effective remedy, if the cause cannot be overcome.

The lessons of itemized accounts in poultry keeping are valuable in many ways. These accounts not only afford evidence of practicability, but they give proof of pleasant or unpleasant facts. They show where economy may be introduced, and extravagances checked, and if all values are carefully considered, plainly prove the industry is almost invariably profitable and always so when given business attention.

As an educator of the public the poultry shows should have exhibits of dressed poultry. A few dressed specimen of the pure breeds of, say about eight months old, should be shown in contrast with ordinary farm fowls of the same age. When it became known that one of the pure breeds yielded in the same time two pounds or more than the commons and cost no more than the other inferior specimens, it would open the eyes of some of the doubting Thomases. Object lessons are wonderful for disturbing deep seated prejudice, and far better than words.

A loaded shot gun is a very important accessory on a chicken ranch of any size. If crows are after your chicks, it becomes a matter of getting the crows or losing the entire brood. Crows become very daring more so than hawks. Kill a crow and hang him head down in a conspicuous place, it is the best warning "scare crow" you can put up. It is claimed stretching white cord (twine) several times across a poultry yard will keep crows from poaching on the premises. Crows come only after chicks when they have young in the nests. They seem to consider that chicken and newly sprouted corn makes an especially desirable diet for young crows—much to the disgust of the farmer and poultry raiser.

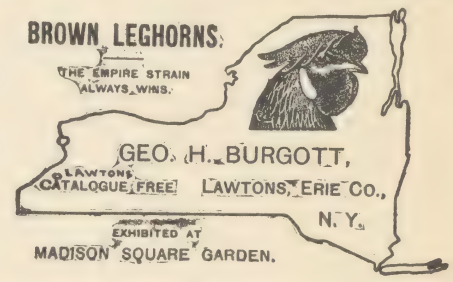
"Keepin' summer boarders now I hear," said Bill Tomsin to Billups at the cross roads store post office. "Yep, city folks and some on 'em puts on more airs than a cyclone. One on 'em kicked on white-shelled eggs, wanted brown eggs so I had to furnish 'em." "Thought you had nothing but White Leghorns." "Yep," replied Billups, "that's so." Looking cautiously around he added in a low tone, "the ole woman biles 'em in weak coffee and ole Gotrox gets his brown eggs, and declares they are much better than white shelled eggs. I tell yer these city folks lose their appetites if they lose their imagination. Keep mum Bill." Billups bought six cans of string beans and left. Bill Tomsin sat down on a keg of nails lit his pipe as he looked after Billups going up the road, and muttered to himself. "An' I have called Billups a fool, next thing I'll be admirin' of him."

What are you doing in the way of planting special crops for your poultry. It is not too late to plant cabbage, rape, mangelwurzels, rutabagas, or to sow crimson clover or rye. The last two named can be put in the last week in August and they will make good winter pasture for the flock when there is no snow covering the ground. There is nothing that is better for early spring pasture for poultry than well set crimson clover.

There is something about the incessant chatter of Guinea fowls on a farm that harmonizes with the surroundings, Their frequent cry of "buckwheat" is as pleasant to hear as the "Bob White" cry of the partridge (quail). Guineas seem in some way to naturally belong with a flock of poultry on the farm.

Women are coming prominently to the front as poultry raisers. Why not? Some of the most sensible and practical articles on poultry are now written by women. They are more enthusiastic than men and attend to all the essentials more thoroughly. As a ways and means committee, women distance the men in all respects. The success they attain with "primitive" arrangements proclaims the importance there is in good care and intelligent attention.

Miss Anna Brennen, who is remarkably successful raising poultry says: "I always take a peep into the chicken-houses the last thing before retiring to see that all is right. By doing this I am enabled to discover if any of the flock is ailing, and if I find they are I attend to them at once. Early attention in the case of sick fowls I find is about the only way to cure them. A delay of even a day or two will often cause disease to become too firmly established to effect a speedy cure. Fowls that are sick a long time are never worth much afterward and should never be bred from."



OTSELIC POULTRY YARDS, (Estab. 1886)

Over 1,500 birds to sell. Can furnish anything you want in Ornamental, Exhibition or Utility Stock in Poultry; Waterfowl, both Domestic and Wild; Swan, Peafowl, Guinea Fowl, Pheasants, Pigeons, Rabbits, Ferrets, Cavies or Guinea Pigs. I can fit you out with anything you want in this line. Any quality you want at right price. Correspondence promptly and cheerfully answered.

BOYER'S TALK

THE MARKET DUCK

Avoid sudden changes of bill of fare.

Duck eggs are readily tested on the fourth day of incubation.

The Pekin continues to enjoy the monopoly of being a market duck.

Ducklings have a market as late as September.

The mash should be fed in a moist state.

Fresh water should be before the stock both day and night.

Ducklings do not crowd in the brooder like chicks do, but lie separate and flat on the floor.

The demand for green ducks has always been greater than the supply.

At four weeks of age the duckling should weigh about two pounds.

The germ in duck eggs develops more rapidly than it does in hen eggs.

An overfed duckling will get a setback that will retard its growth for a week.

Avoid excitements. The weakest part of a duck is its legs, and when greatly excited, it will at once lose control of them.

Water cress is a green food greatly relished by ducks. While living in Virginia, the writer fed cress liberally to his stock and found it not only highly relished but very beneficial.

When drakes are seen to unduly worry the ducks, and continually nagging them, it is best to remove them.

Skill, practise and study are called for in successful duck culture.

While the duck will thrive in any kind of a shed or shelter, it must not have damp quarters. Dampness is fatal to both old and young stock.

It is claimed that an experienced picker will dress between 40 and 50 ducks a day.

Twice the number of ducks can be given a drake during June and July than would be advisable earlier in the season.

An experienced duck raiser says that if the breeding stock has been selected for the brightness of the eyes, for the roundness of their orbs, and for stamnia and muscle power, in preference to size, weight and sluggishness, they cannot help but give good results.

Theo. F. Jager says it is one thing to have good breeders, and the next thing is to not only hold their good breeding characteristics but to improve on the same in the offspring. Feed them by all means as breeders ought to be fed. Do not use the fattening ration, as it is fed to the young ducklings intended for market, for ill effects will be the result.

The main trouble with beginners is that they insist in too closely confining their ducks over night, thereby causing them to feel uncomfortably warm, says Mr. Jager, and as this is conducive to start them molting, and as a molt will in each and every case cause a drop in the receipts of the eggs as well as in their fertility, it is easily seen why we should keep the birds from feeling too warm at night.

Mr. Jager advises gathering the eggs as early in the morning after the laying as possible; half past seven o'clock is about right.

POINTERS ON GEESE

The Embden variety are noted for being excellent mothers.

The ancient practice of picking live geese for their feathers, is not practiced at the present time. It certainly is cruelty.

The Brown and White China geese are often termed bantams.

The Toulouse geese come the nearest to being non-sitters of all varieties.

It is claimed that the Embden variety is better grown under neglect than is the Toulouse.

As a rule, the Toulouse will lay more eggs than the Embden or African, but a well-bred China goose is superior in this line to all others.

The African goose has a more stately carriage than the Toulouse or Embden, but not so erect as the modern Brown and White Chinas.

Geese are wonderfully free from disease.

Toulouse geese being of a quiet and peaceful nature, are easily confined by low fences.

There is a great resemblance between the Embden and the Toulouse in form, and some writers claim that both varieties descended from the same parent stock.

The Toulouse is a massive bird, and is probably the heaviest of all varieties. Some years ago a pair was exhibited that weighed sixty pounds.

Usually the Embden begins laying before the Toulouse, and their eggs are somewhat heavier. They will not, however, lay quite as many eggs as the Toulouse, and are much more persistent sitters.

The Toulouse derives its name from one of the cities in France; the first importation into England, however, came from Marseilles, a city in the southeast of France.

The Toulouse matures more slowly than any of the other varieties.

The Embden goslings are as a rule hardy and grow rapidly. As "green geese" they are the most desirable on account of their white plumage, which gives them a much more attractive looking carcass.

William Rankin thinks the pure-bred African is the most perfect goose. He says they not only mature earlier, buy lay more eggs and make more pounds of flesh in the same time than any other variety.

The utmost confusion prevails in poultry literature regarding the name of the African goose. Saunders says: "The principal breeds of geese are the China goose (which is also called the Guinea goose, Spanish goose, and a host of other names in the English tongue), Toulouse goose and the Bremen or Embden goose."

TURKEY CULTURE

The turkey was known in the old world before 1766, when the Mexican species—the only domesticated variety—was imported.

Clean turkey feathers that are sound and well picked, command a ready sale in the large city markets. The tail, wing and body feathers, and also the different grades, should be kept separate. In packing, lay the long feathers straight and press down tightly in small case, marking shipper's name or mark and tare on case. In sorting the wing feathers, those which have full plumage on both sides of the quill are the most valuable, and should not be mixed with the "pointers." It is usually cheapest to ship in small quantities by express, and by shipping as "turkey quills," it will save in the freight charges.

Turkeys being naturally wild, they thrive best when they have freedom.

For table qualities there is little difference between the Bronze and White varieties.

Markets generally prefer weights of from 10 to 15 pounds.

The following experiment was tried some years ago in the use of charcoal for fattening turkeys: Four birds were confined in a pen and fed on meal, boiled potatoes and oats. Four others of the same brood were at the same time confined in another pen and fed daily on the same article, but with one pint of very finely pulverized charcoal mixed with their food—mixed meal and potatoes. They had also a plentiful supply of broken charcoal in their pen. The eight were killed on the same day, and there was a difference of one and one-half pounds each in favor of the fowls that had been supplied with charcoal, they being much the fatter, and the meat being superior in point of tenderness and flavor.

Mrs. Mackey says you cannot succeed with turkeys without a good range for them after they are about six or eight weeks old. Neither can you be very successful unless you are prepared to keep your little poults dry during storms for the first ten weeks of their lives. You must have a shelter for them at this tender age.

However gentle a turkey may be she has an inclination to steal her nest; so in order to succeed you must be willing to sacrifice much time watching them go to their nests.

"SURE" CHOLERA CURE
The only remedy on the market that **positively cures and prevents Chicken Cholera,** Limber Neck, Liver Trouble, Weak Legs and Diarrhea — simply put it into the drinking water—cholera sick birds drink lots of water and are quickly cured.
50c package, sent postpaid, will cure hundreds of cases of cholera. If it fails, **you get your money back.** Send 50c for a package **today** on this **guarantee**--it will save you money. Write for valuable **free** book on Poultry Diseases, symptoms and treatment — a book every live poultryman should have. **Agents Wanted.** Address
Hugo Freese, Box 606, Rochester, N. Y.

"EGGS, BROILERS AND MONEY"
Is the title of a book that tells the breed of fowl with which you can make money. It is a general talk about eggs and broilers based upon an experience. Free for the asking.
LAKEWOOD FARM COMPANY (Inc.)
Burrsville, New Jersey
Breeders of Lakewood Farm Layers, etc., Great Profit Payers.

THE CENTURY SPECIALTY CO.
The Century Automatic Self-feeding Water Faucet is the greatest time and labor-saving device for watering poultry on the market. It feeds the water automatically into the pan as fast as the fowls drink, thus insuring pure and fresh water at all times, which is absolutely essential to the health of fowls and chicks. The pan is never empty nor can it overflow. It can be readily removed for the purpose of cleaning it. The faucet is equally as well adapted to the small fancier as to the large fancier as they can be attached directly to tub or pail. For price list and further information address,

Editorial Gossip

Reports from the Pacific Coast tell of wonderful prospects for crops of all kinds, both upon the farm, in the fruit growing regions and in poultry. The hatch reported from there in chickens, turkeys and all kinds of waterfowls is remarkable.

The reports from the New England and far eastern states, in and about Boston, and through Maine, tell of a very late cold spring, poor hatches and backwardness in all kinds of farm and poultry crops. It is astonishing the diversity of climatic conditions we can have in this country in the same twenty-four hours. A letter from England dated the first of April spoke of the beautiful mild weather they are having there. Only two weeks later we heard that they had had a little snow the 19th of April in the same locality.

Do not overlook the fact that plenty of shade will be needed during the next few months to protect the growing chicks from being blistered and reduced in flesh. Nothing is so injurious to the young stock as to be overheated during the summer months.

You never find lice or insect vermin where perfect cleanliness is the rule. Whenever any one finds that his poultry is infected with insect vermin he can rest assured that the principal cause is the lack of cleanliness and a failure to observe perfect sanitary conditions.

Throw open the windows and the ventilators of the poultry-house during the heated months. The direct rays of the sun upon the roof makes the interior very hot. The best way to cool this is to lower the windows at the top and leave the doors open. Poultry that suffer from extreme heat either night or day do not do so well as those that are sheltered from the sun and properly housed during the warm weather.

Remember that all growing poultry must have sufficient sunshine to make them thrive, but shade is an absolute necessity from the hot rays of the sun. Sunshine is quite as important and the fowls should have opportunity to roam over fields in the grass and sunlight, and at the same time have shade provided so that they can have its welcome relief whenever they feel so disposed.

The hen houses are quite apt to become very hot during the summer months. The rays of the sun beating down on them heats the interior to an almost unbearable temperature. If the window sashes are lowered from the top and the doors left open, or the sash taken from the window and the frame covered with wire, the circulation of the air through the building as soon as the sun goes down, will reduce the temperature very much and make an otherwise unbearable hot interior quite pleasant for the poultry.

Thousands of chicks and poults will be lost during the present season that might be saved if common-sense, every-day methods of the right kind were applied. It is an easily understood proposition that these young fowls must be protected from the hot sun, damp weather and vermin. If they are thoroughly protected from these and properly fed and watered, it is quite as easy to grow them as to grow ducks and geese, that often survive simply because their manner of living leads them into clean places and away from vermin.

It will not be long before the season of moult will be upon us. Inquiries are already at hand asking how it will be possible to hurry up the moult of the fowls, and have them ready in good season for winter laying. There is a theory advanced that if the poultry is shut up for a week or ten days in a close warm hen house, and feed them so little as to almost starve them, then at the expiration of ten days or two weeks turn them out to have a free run on the field and feed them all they will eat, that this kind of handling will induce an early and speedy moult. This has and can be done, but it takes very careful management to carry it through successfully. It is much better to feed and care for your hens properly and let nature take its course as to the moult.

One feature of poultry growing has never had sufficient attention, and that is growing pullets which are intended for egg producers the coming winter. These should be selected from the balance of the flock as soon as they are feathered. They should be colonized to themselves and fed a grain ration that will grow them to large, strong, well-developed young hens. They should not be fed too much fattening food, but they should be fed a grain ration that will build up their constitution and make them ready for the strain of a continued egg production next winter.

The early hatched pullets will make the profitable layers of next winter, provided they are properly grown. If they are not properly grown they will not be of much more value than the late hatched pullets. Pullets that are well grown and started to laying prior to the first of December usually continue laying during the entire winter while pullets that do not start until after the cold weather of winter sets in, usually fail to produce more than a very few eggs until the coming March or April.

A story is going the rounds of the papers of a hen in Northern Michigan that was so anxious to hatch a nest full of eggs that she picked up two kittens while the mother cat was away and carried them to her nest, and that she and the cat fought a regular pitch-battle for the possession of the kittens, the result being that the cat was kept at bay but the kittens were trampled to death. This is quite an attractive cat story; but, in the first place, how on earth would a hen pick up a couple of kittens and carry them to her nest? After she had them there, how would she be able to drive away the cat and keep her from crawling into the nest? If a cat was determined to have anything from a hen's nest, nothing but a game hen or an unusually good fighter would frustrate her attempt. But such stories attract attention, and people love to laugh at them, even if they are utterly void of the least signs of truth. This story is in keping with one seen a short time ago of a cat that gathered up a dozen or so of young snakes and carried them to her nicely lined box, where she kept them, carrying them food to eat every day. We remember very well a cat that used to kill a number of snakes, but this is the first attempt we ever noticed of fostering upon the people a proposition of a cat gathering up a box full of snakes.

One writer states that you may look for cold-blooded chicks from cold storage eggs. Rather icy.

If a neighbor kills your hens, what can you do about it? "Why, fight," says Pat. You have no recourse at law, yet it was but a short time ago a man won a case of a hundred dollars' damage for a neighbor's dog killing his chickens.

Poultry is property just the same as anything else, and the wilful destruction of property is a misdemeanor before the law and damages may be collected.

We notice in one of our papers the following: "Turkeys begin to lay in May, and from that time until July is the time to set the egs and rear the young. We have in our possesion a number of letters dated during the month of May, asking what to do for the feeding of the young poults, some of which are six weeks old. Turkeys begin to lay anywhere from the middle of March on through the season, The average number of eggs laid by a turkey is from 30 to 45 in a season, and the young poults must have very careful attention, be guarded from the damp and lice to keep them from destruction.

Whitewash made of lime is splendid as a deodorizer and a very attractive addition to the poultry house; but do not trust to the lime for destroying the insect vermin. As a general thing, lime wash has but very little effect on them. It may destroy those that it comes directly in contact with at the time of application of same is made to the house. Other than that, it has very little influence toward the destruction of the hen lice.

We have a letter from a correspondent asking whether a running brook is advantageous to a poultry plant. The writer wishes to know whether it would be proper to build the yards so that the poultry can run to the brook and drink at will. Nothing could be better than this, and where poultry can have a continuous run to the running water, they seldom, if ever, visit the drinking pans or fountains.

Some one recommends a good dry cellar as the best place for the incubator. We should prefer one troubled a little with moisture.

Why should you recommed a dry cellar as the best place for the incubator, and then use the sprinkling can for moistening the floor?

The care of late hatched chicks will soon be upermost in the minds of different people throughout the country. Chickens that are hatched prior to the first of September should be cared for just the same as are the May and June hatched chicks, only that more trouble or pains must be taken for cleanliness and shelter from the sun. Those hatched after the first of September on to November, should have board floors under the hen-coops so as to keep them up off the ground that is apt to become damp and cold; otherwise the same attention will answer.

Get the young chickens on the ground as soon as they are able to run about.

WASHINGTON, D. C.

Placing all the blame for certain dangerous ailments of turkeys on inbreeding is hardly fair. It seems to us that much of the trouble is caused by selecting birds with impaired constitutional vigor. Wild turkeys are hardy enough and in nature inbreeding is carried on continuously, but "the survival of the fittest" rule is largely responsible for the health, vigor and constitution of wild birds. Several bronze turkey breeders in the East have in the past few years had their flocks raised in Tennessee, certain sections of the latter state being especially adapted to turkey culture. The mountainous farms and forest ranges of Western Pennsylvania produce magnificent turkeys, the great size, vigor and luster of plumage of birds raised there, and exhibited at Pittsburg and Johnstown (Pa.) shows, attracting the attention of all lovers of this great American bird.

Mr. C. I. Odell, Montreal, Canada, writes: "In your editorial column you mention the color as given by me in the Poultry Review for hackle back and wings of a Black Red Game cock to be rich red. This is incorrect. The color I give is as follows: Neck hackle, rich, bright orange red, and not the color 'red' only, or that undesirable color 'lemon.' I give back and wings a rich vermilion red, not the word 'red' only, as mentioned in your paper. There is quite a difference in the above two colors. A Game cock with a red hackle, back and wings would be outclassed with a bird of the color I give in the hands of a competent judge. As to color of legs I mentioned, so long as the birds match in the pen and possess the same colored leg, let that color be willow, white or yellow, the bird or birds possessing the greatest number of points that go to make up a Game fowl should win regardless of color of leg. The present undesirable exhibition Games have gone completely under cover. Now let the Game fraternity get together and bring forward an exhibition Game fowl that will once more gain that popularity it so well deserves. At most our exhibitions in Canada the past few years not more than three of four Game fowls have appeared in the show room, and they usually belong to one exhibitor. My motto is not to have only a few Games bred, but to get as many fanciers interested in the Game fowl as possible, and endeavor to bring this once popular breed to the front again." We are glad to publish the above as it explains Mr. Odell's ideas clearly as to color. But we do not think that the trouble lies with the color; it is the lack of interest taken by exhibitors and show managers in Games, added to the fact that not all sections in the United States are suitable for raising prime specimens.

In England where the Game fowl is seen at its best, and where its popularity is as great as ever, color certainly did not destroy the value of the bird or decrease its numbers at the shows. In looking over the English Standard we find the Black Red cock bird described as follows: Head, orange red; hackle, light orange free from black stripe; back and saddle, rich crimson; wing-bow, orange; legs, willow green. In the American Standard hackle and saddle are described as light orange in color, the wing-bow as red, and the feet as willow. So there is but little difference in the two Standards as far as color description is concerned Yet in England the Black Red Game is frequently the star of the show, and commands a long price when offered for sale, while in this country even the best birds are slow to sell. Color did not affect the Games in England and we do not believe it did in the United States and Canada. We have not seen either white or yellow legged exhibited Games shown in recent years, and doubt if fanciers of Black Reds would care to introduce the flexible standard color for legs Mr. Odell advocates, even if birds do match in a show pen. Yellow legs on a Black Red male give rise to the suspicion that he is Pyle bred.

At the annual meeting of the Pittsburg Fanciers Club, June 1, the following officers were elected: President, G. Wash. Moore; vice-president, E. H. Seldon; secretary-treasurer, G. C. Sutch; superintendent, J. M. Skiles; superintendent of poultry, F. F. Best; superintendent of pigeons, E. H. Seldon; chairman show committee, J. B. Foster. The dates of the show are: February 19 to 24, 1906. The judges selected are: Charles McClave, S. Butterfield and G. O. Brown, on poultry; F. G. Erbe and A. J. Edwards on pigeons. This is the ninth annual exhibition of one of the most successful and ably managed poultry societies in the United States.

The New Standard of Perfection will contain about 300 pages, including all illustrations. The old Standard contained 246 pages without any illustrations.

The big Hagerstown show will be conducted on the same lines as the late lamented John L. Cost had decided upon. His wishes will be carried out and fulfilled, so Assistant Superintendent Spahr writes us. The judges will be the same as last year, viz: G. O. Brown, F. B. Zimmer, D. A. Nichols, J. F. Crangle, W. J. Staunton and J. H. Drevenstedt. The dates are October 10 to 13. Premium list will be ready by August 1.

Superintendent T. C. Van Wyck, of the Poughkeepsie show, informs us that no tents will be used this year as the old poultry building has been rebuilt and enlarged and will be equipped with Empire coops. This announcement will be hailed with great pleasure by numerous exhibitors and will add greatly to the prestige of the most excellent fall show.

The American Light Brahma Club will offer suitable ribbons to be known as John L. Cost mementoes, so Secretary Rumbold writes us. This is a good idea, and we hope to see the largest exhibit of Light Brahmas at Hagerstown in its history. Light Brahmas were Mr. Cost's favorites, and he never tired singing their praises and admiring choice specimens at shows he attended. The members of the above mentioned club should make special efforts to bring out big entries. It will do the breed much good and at the same time do honor to the memory of one of its greatest champions.

The candidates for judge of bantams at the Madison Square Garden, New York, January 2 to 6, 1906, to be voted on by members of the National Bantam Association are: H. J. Quihot, Chas. M. Smith and Chas. Zehl. All votes must be in September 15. This excellent club numbers an even one hundred members, including nearly all the shining lights in the bantam fancy of America.

According to Editor Donovan, of the Canadian Poultry Review, "Uncle Billy" McNeil has a kindergarten class at the meetings of the London Poultry Association, of London, Canada. It is there "Uncle Billy" puts the young fanciers and some of the old ones as well through a series of chicken stunts that are very beneficial and valuable to all, for Mr. McNeil is a past master in the art of fancy poultry culture for exhibition.

At these meetings much interesting debate is participated in, and much valuable information given by the members. To judge by the reports on "hatches" the season in Canada must have been the "worst ever." One breeder reported the possession of just one chick as a result

Gallery of Fame

WILLIAM McNEIL

THIS life-size portrait of Mr. Wm. McNeil, London, Canada, will be recognized and appreciated by many thousands of our readers. Mr. McNeil needs no "send off" to make him better known, for he is one of those fanciers who have made their own way in the business. At all of the great shows of this country and Canada you are sure to see "Billy's" birds in the lead. His "string" of exhibition birds each year is made up of stars from the beginning to the end. and it takes what is so hard to find, better birds to beat him. He is a true fancier in every sense of the word, and his love of the feathered beauties has been the chief cause of his success. He is a jolly good fellow and makes one glad to meet him. This portrait shows him in his Sunday clothes without his linen duster.

of the early season work. Both Mr. McNeil and Mr. Oke strongly advocated commercial chick feeds. It seemed to be the general opinion, however, that soft feed was best for quick growth and feather growing. The Hon. Richard Oke said he liked incubators but did not believe in brooders. This started Mr. Morgan on the warpath and Richard was knocked out in one round. Water or no water for chicks resulted in considerable discussion. Mr. McNeil did not give water to his chicks, which led Mr. Kedwell to state that he did, and, also believed that it would be better for people if they got better acquainted with water. The representative of the Canadian Poultry Review believed in giving plenty of water to chicks from the start. He also stated that he had tried to feed for feathers in the feather varieties by use of soft feeds, and for Game Bantams used a dry mixture of hard fragments and has come to the conclusion that it was not so much in the feed as in the feeder, and believed thoroughly in the best mixed rations put up by reliable poultry dealers of poultry food.

Mr. T. Kiley, of Aylmer, Canada, has imported from England pens of Black Japanese, White Polish, and White Frizzle Bantams. They will be seen at Toronto in September.

The egg business, i. e., selling eggs for hatching, is not a crimson sunset of pleasure; neither is it always the most profitable means of gathering in the coin of the realm. Many shrewd and experienced fanciers refuse to sell eggs at any price. The late John Glasgow could not be induced to sell an egg from his Games and Game Bantams, and although he would sell or give away birds, he would not present even his best friend with a setting of eggs. He said if there was anthing good in the eggs his hens laid, he might as well have that himself. But that is not the chief fault. The latter is principally caused by ignorant or dishonest buyers of eggs. The former expect too much and are not sufficiently posted on the vagaries of hens that sit, and the pranks that the eggs from the most finely bred hens are liable to play; the latter simply tries to work the seller into duplicating eggs or getting his money back, accompanying frequently his request with a dire threat of exposure in the poultry press. This is the class that has driven many a good fancier out of the egg business. As to the ignorant buyer, experience soon teaches him that a single-combed chicken from a setting of rose-combed fowl eggs is not a rare occurrence. Even several or more single-combed chicks will appear at times. In one lot of Wyandotte chicks hatched recently we found three single-combed ones out of thirteen; in another lot only one chick with a single comb and variations were the same in settings from the same pen given to neighbors. There is usually some hen that is responsible for this, and by discovering her identity, this one cause for dissatisfaction can be removed. But it is rarely that the culprit can be discovered in time to do any good and we must grin and bear it. There are some breeders, however, that are not a bit alarmed over the appearance of some nice single-combed chicks in a White Wyandotte clutch. They immediately see visions of winning White Plymouth Rocks, going on the theory (?) that the single-combed sport is usually the best and with such breeds of duplication as the White Wyandotte and White Plymouth Rocks, Buff Rocks, and such variety duplicators as Rhode Island Reds, White and Brown Leghorns, etc., the selling of two different varieties or breeds from a single pen is not to be scoffed at. Its a case of revenue. But what are we going to do about it?

Another reason some breeders of certain varieties decline to sell eggs is: they cannot afford to disclose the fact that they have used an outcross of another variety to blend in with the breed they simply fancy for show purposes. "The end justifies the means" is their idea of the game, and some of the prize-winners at shows, that look as if bred in the purple and in whose veins only the simon-pure blue blood of unbroken line of convert sires and dams flows, are nothing but half-breeds that rarely if ever amount to anything in the breeding pens, in fact are really useless, unless bred back to the dam and by careful selection of the progeny in succeeding generations, the fixed breeding characteristics are once more established.

It is about time for some enterprising water-fowl fancier to breed and show the true Aylesbury Duck again. It is sad to relate that the Aylesbury Ducks seen at our fall shows and except on rare occasions, at our winter shows, are not what they should be in size and shape. The crossing of the Pekin with the Aylsbury has been resorted to and spoiled two good breeds. The type of the Aylesbury is as distinct as is its color from that of the Pekin. Crossing mongrelizes the progeny. The winning Aylesbury drake at a show in England some years ago in length was some inches larger than the longest walking stick that could be procured. Such a specimen shown to-day in this country would make a sensation.

In conversation with a well-known exhibitor and fancier a few weeks ago the latter remarked: "I notice a discussion going on regarding the right to protest at shows, and I am sorry to note that some men are encouraging a practice that should never be tolerated at a well-conducted show. I do not believe in entertaining protests of any kind." This was followed by numerous explanations with some qualifications, but in the main we believe this fancier to be correct. At the Johnstown (N. Y.) shows held in the past, very little heed was paid to protests. The society that held the shows endeavored to secure qualified men for the classes they were assigned to, and announced the judges' names and the varieties they were to judge in the premium lists. The decisions of the judges were final. To protest on a problematical or fancied error of judgment is not considered sportsmanlike and usually injures the party making such protest, more than it does the judge. Societies that employ incapable judges are to be censured and not the judges. Exhibitors are not obliged to show under men that lack experience or ability to handle the classes assigned to them. To protest the awards on the score of ignorance or incompetence on the part of the judge under such conditions is a waste of time and money. Where fraud or collusion can be shown to exist, an appeal to the executive committee for investigation will usually result in the right way, and the guilty will be punished if the proof is at hand.

It is about time somebody starts the usual summer controversy agoing, viz.: "Score card or comparison judging." Several large shows last winter have bid adieu to the score card and will take up comparison judging.

SQUABS sell for $2.50 to $6.00 a doz.; hotels and restaurants charge 75 cents to $1.50 an order (serving one squab). There is good money breeding them; a flock makes country life pay handsomely. Squabs are raised in ONE MONTH; a woman can do all the work. No mixing feed, no night labor, no young stock to attend, parent birds do this. Send for our FREE BOOK, "How to Make Money with Squabs," and learn this rich industry.

PLYMOUTH ROCK SQUAB COMPANY,
334 Howard St., Melrose, Mass.

CHAPMAN & McQUILLAN
Barred and White Plymouth Rocks

We won at New York (Herald Square) on White Rocks,

1, 2, 3, 4, 5 Cockerels;

1 and 2 hen; 2 and 3 cock; 3, 4 and 8th pullet and 2 and 3 pen.

ALL SWEEPSTAKES AND SPECIALS.

On Barred Plymouth Rocks, six entries, 2 pen, 3 ckl., 5 hen and 6 cock.

Plymouth Rocks combine more useful and fancy qualities than any other breed in the world; in fact are the rocks that are the foundation of the poultry business today. If interested in this best quality of best of all breeds, write us in regard to prices and for our winnings and mating list.

Notice.—No every other week or once a month contracts for classified advertisements will be accepted. See editorial page for classified ad rates.

PLYMOUTH ROCKS.

Chance of a Life Time. Millville Poultry Farm Company will discontinue breeding poultry for show purposes, and in future will devote its entire capacity to producing chickens and ducks for market. We will sell you any prize winner or breeding bird in our possession for 50 per cent of its true worth. This sale includes all our winners at St. Louis, New York, Boston, and at other leading shows, as well as cream of stock bred from these winners. This sale positively closes July 10th. Any old birds remaining unsold at that time will be carried over until October, when we will hold a sale of cream of our 1905 hatched youngsters, and balance of old stock. Eggs from all prize matings half price during June. Broiler eggs $6.00 per 100; $50.00 per 1,000 during June. Positively no shipments made between July 10th and October 10th, as Mr. Delano closes his connection with our farm on July 10th, but will return October 10th to conduct a sale for one month in the fall. Orders booked for October delivery at any time. Prompt buyers will procure the plums. Prices quoted on single birds, pairs, pen, or entire flocks of any one variety. We offer you the best in America in Barred, Buff and White Plymouth Rocks, Buff and White Wyandottes, and Pekin Ducks, and at prices you will pay. MILLVILLE POULTRY FARM CO., Maurice F. Delano, President, Millville, N. J. 22-tf

Corey's Buff Rocks Again Victorious! At Hartford, Conn., 1905, 1st and 3d cocks, 2d and 4th hens, 2d pullet, color special. Keene, N. H., 1905, 1st cock, 1st hen, 1st pullet, cup for best display. 1905 mating list now ready. M. J. COREY, 900 Sumner Ave., Springfield, Mass.

Buff Rocks Exclusively.—We Have Mated Up for this season's breeding our best birds selected from our Auburn winners, nice, rich, even buff, and will book a few egg orders at $2.50 per 15. See Fancier for Auburn awards. STEPHEN WESTLAKE, 17 Union St., Auburn, N. Y. 96-47

PARTRIDGE WYANDOTTES

ARE WITHOUT DOUBT THE COMING BREED

Many of our leading fanciers have started in to breed them this season, which is one of the proofs of the above assertion.

For **beauty** and **utility** they have no superiors, and when reliable stock is obtained they breed true to color and markings, and are the breed that a new beginner should start with as well as the experienced fancier. They are also the **poor man's friend**, as they will fill the egg basket, if properly fed, when eggs bring the highest prices.

Eggs are very fertile at this season of the year, and many prize winners are hatched during the months of June and July; so send in your egg orders at once. They will cost you $5 per 15; $8 per 30; $10 per 45.

In order to make room for growing chicks I will sell 200 **exhibition and breeding birds** at **half price**, a part of which will be delivered immediately and the balance after July 1. Remember, my birds won the **lion's share** of the most coveted prizes at the **largest shows** last season, and that both my prices and quality are right.

J. B. HADAWAY
609 North Main St.
Brockton, Mass.

A Paper Incubator.

150 Egg Capacity.
Weight, 80 Pounds.

HENS SECRET DISCOVERED

This Incubator is a Wonder and the Leader of All Incubators.
Does not require an expert to get a successful hatch.

Made of Paper—the World's best-known Non-Conductor.
As strong and durable as wood.

TESTED. SUCCESSFUL. PRACTICAL. GUARANTEED.

Will heat up in any outside shed in zero weather in one hour, and will use from 50 to 75 per cent less oil than any other incubator on the market.

No even temperature necessary; any temperature between 95° and 106°, like the hen's, will secure a 90 to 100 per cent hatch of fertile eggs.

Our Regulator is tons of air and an even heat not necerrary.

Our Brooders—on the market for the past seven years—have demonstrated to the most exacting that they can raise in them 95 to 100 per cent of chicks.

AN EASTERN LEGHORN FARM. ONE OF THE LARGEST PLANTS IN THE EAST

Young's Strain S. C. W. Leghorns

I Have No Other Breeds

My strain, again for the 5th consecutive year, shows its superiority by winning more prizes at Madison Square Garden, New York, than all others combined, including cup, medal and four specials. Two weeks later I showed at Boston against the most prominent breeders of the East, winning nine prizes on nine entries over birds that won 1st at St. Louis.

I showed 2 Cocks, won 1st, 2d; I showed 2 Hens, won 1st, 2d
I showed 2 Ckrls., won 1st, 2d; I showed 2 P'l'ts, won 1st, 2d
I showed 1 Breeding Pen, won 1st

Also four specials. This record has never been equaled by any other breed or breeder in America. Stock for sale at all times. Eggs $3 00 per 15; $15.00 per 100. Address 44

BUFF WYANDOTTES

At Boston, Mass., Jan. 17-21, 1905, was held the Buff Wyandotte Club meeting which brought out all the largest and best eastern breeders and the largest and best exhibit ever made. **The Herald Square Winners** were there, the **Madison Square Winners** were there, and **Our Winners** were there and won their usual **Three Out of Five First Prizes,** making **Five Years in Succession** that we have won three out of five First prizes at Boston. This year we al o won both second prizes where we lost the first prizes, as follows: **Cocks, 2, 3, 4, 5; Hens, 1, 2, 6; Cockerels, 2, 6; Pullets, 1, 6; Pen 1.**

Please note our record since 1897, given below, and remember this is the ancestry that keeps our strain of this variety at the front, it dont cost any more than the other kind.

The American Fancier

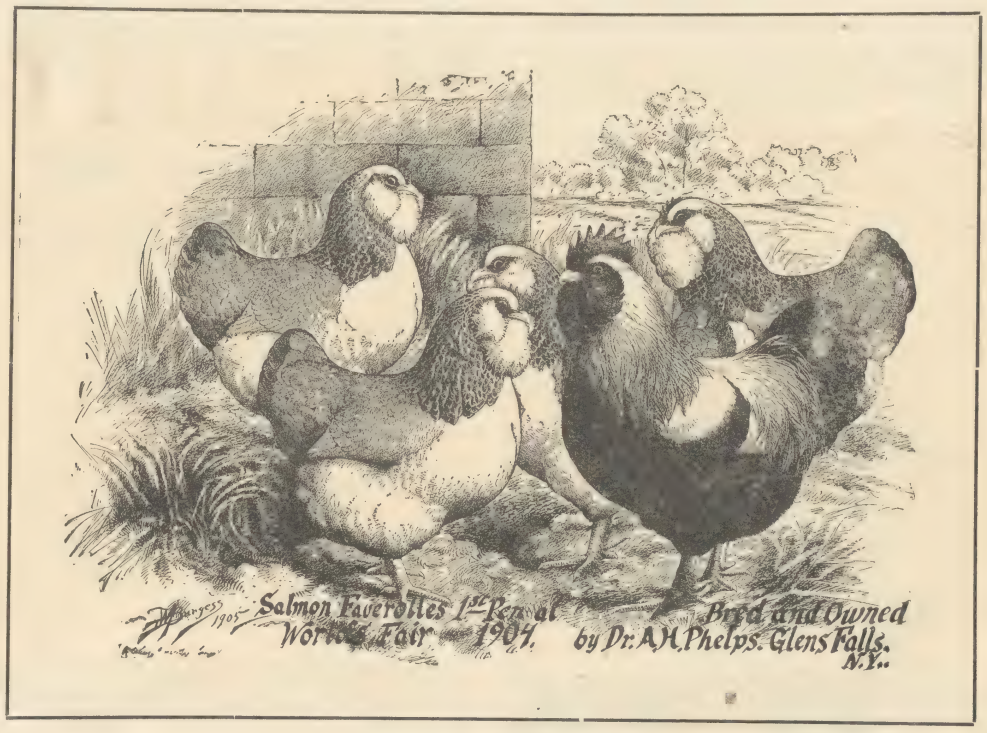
A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV — Washington, D. C., June 24, 1905 — No. 613

NOTES FROM ENGLAND

By John Wharton

Spring has come at last. The swallows arrived April 29, and the cuckoo began to call on May 2. The ground is now decked with daisies, whilst the banks are primrose covered, which are now at their best. Young birds are on the wing, and the young flowers are budding on the grass in almost every field. On the whole it has been a long winter, but not a severe one. Skaters had only some three days sport during which time the usual number went under the ice.



The hatching season may be said to be fairly over and from reports to hand we consider it an average one, although some complain of unfertile eggs. Where such reports have come from we have generally found that a change of cocks would have put the matter right. Moral: Always keep a few spare stock cockerels.

The summer show season has now begun, opened by the Lancashire fixture of Delph, and then quickly followed by Otley in Yorkshire. Otley is always looked upon as the first meeting place of fanciers for the season. A really good show took place and scores of fanciers turned up. The birds were A1 quality, as they always are at this show. The great majority were last year warriors that had been kept in trim to go the round of the summer shows. Their condition bespoke that they were in the hands of fanciers who knew their business.

In the Cochin class a beautiful buff cock owned by Mr. Proctor of Durham—a respected name in the fancy—headed the one class given to this popular breed. Wyandottes had six classes, viz: two for Gold or Silver Laced, two for Buff or Whites, and two for any other color. The first class was led by Mr. Preston's international Gold cockerel. He was looked upon as the champion chicken of last year and right well does he wear. His lacing is perfection. His only fault is in shape, a little more blocky built and he would be perfection. Rocks were good classes, and a rare bargain was picked up in the first prize Buff cock at twenty-five dollars. He was sound all over, of good shape and in the best of condition. Minorcas and Leghorns were good classes, and teemed with quality. The winners were in new hands, and we heard the price at which they changed hands was a heavy one. Messrs. Whitaker and Tootill were the lucky sellers. Brahmas were good, but not large entries—how are the mighty fallen! Hamburgs were good and had their full share of classes. A couple of novice classes had been put on, but they were a failure.

Otley show has now been held annually for over fifty years, and we are told it takes a gate of $3,000 to make the show a success. So far it has proved a financial success. It is a show of two days' duration, but poultry is only on exhibition on the last day. Judging commences at 10 a. m., the same is over by about 1 p. m., when the tent is open to the public, and by 4 p. m. you will see exhibitors packing up their birds and off to the railway depot. The first prize is five dollars; second, two dollars and a half; third prize, one dollar and twenty cents, for an entry fee of eighty-four cents. To the best bird in about every twelve classes a gold medal is awarded. You can guess these gold medals are looked after and valued when won.

Belfast, in the North of Ireland, has just held a splendid show in connection with the agricultural show. Some eight or ten English exhibitors went over and accounted for fully two-thirds of the cash prizes, and especially the firsts. Many of the Otley birds won there. Ireland seems to be on the upward grade in regard to shows in general, fresh ones cropping up year by year and old ones improving. So it should be; from what I have seen of it, it is a fine country for poultry. Over there the Faverolle is a great favorite, as is also the Orpington, while the Indian Runner Duck is largely kept. In fact, at Belfast, some of the best classes of Runners ever seen have been brought together.

SALMON FAVEROLLES

Writing of Runner Ducks reminds we that for some time a good deal of ink has been wasted on a general wrangling on the desired type of the breed. I was one of the first to breed them; in fact, long before those who are now wrangling over them knew there was such a breed of ducks in existence. In fact, they were my first love in the fancy, and although I gave them up some fourteen years ago, yet I am as much interested in them as ever. I parted company with them on account of the water supply on my farm not being suitable to breed them in quantities. Soon after I had disposed of them, I was visited by the late Mr. Hy. Digby, of Aylesbury Duck fame. He asked me to pick him up what I could in my neighborhood of my old strain. I did so at a little over a dollar each, or to put it in plain English, a crown each. When I sent them and told him what I had spent he thought I was joking. The price seemed too small to be right. He bred off of them that season the Crystal Palace and other winners, selling some at one hundred dollars each. He often told me that when I wanted to start Rubber Ducks—for that was what he called them in his jolly way—I could go and pick the best pair I liked out of his yard. The strain is still in his widow's and his son John's hands, and a purer strain does not exist today, despite all that is written. Runner by name and runners by nature and habit they wander, if they have liberty, a full mile from home, pick up nearly all their living, and lay fully two hundred eggs per year, if in a neighborhood favorable to slugs.

A curious freak of nature has just been reported in The Feathered World—so curious that when reported to the editor, Mrs. Comyns-Lewer, she sent a representative to see if it were really true. It is described as a fowl with a nose, face and ears resembling a hedge hog. It has no beak, but feeds with its tongue. Its head is covered with fur and the rest of the body with feathers. We are not told how it has been bred or whether it is a cock or hen. If the latter, the eggs ought to fetch a good price to begin a strain of fowls that would eat grass like sheep and save lazy poultry keepers having to get out of bed to give out the hens' breakfasts.

Birkenhad show is to be held June 22 to 24. This show has had a wonderful career. Piloted by one of the best secretaries ever known it has passed through more real trials than any show I know. The fixture used to be held in September, but, strange to say, year after year it rained in torrents until they changed the date to try and get better weather. But stranger still it hit upon a regular cyclone. Never shall I forget that show. The judging was just over when the storm came on. The tent began to sway and the orders went out: "Pack your birds!" I got my own into safe quarters and went on helping to pack the others. Down came the tent; out flew pigeons only to be beaten down by the wind. The dog tent went down on a few howling dogs. The floral tent also went down. In fact, every thing that was movable was blown down. As all this happened before the public was admitted there was no gate money and the expense must have been immense, but out of it all the society has made headway, so that it has now one of the finest permanent show grounds in the world. It is a pity though that the date has been changed as it was always looked upon as a first-class chicken show, while now it is only a repitition of the other spring and summer shows.

The old established fancy journal, The Fanciers Gazette, has changed its name—now it is known as Pigeons and Poultry. When we hear of persons changing names we generally imagine there is money in it, and we trust that the change of name may be the beginning of even better times for this old-time paper that has so faithfully reported fancy matters for so many years. With Mr. Watenough and the Rev. J. N. Williams in charge of the poultry department and a full staff on the pigeon side of the affair they give us, and no mistake, every thing that is going on. It arrives by first post on Friday morning at my home, and it generally shares my breakfast table; in fact, I always look forward to it to read what I don't know on the doings in the fancy world. May its issue soon be doubled is my sincere wish.

I was pleased to see Mr. Ingalls's article in The American Fancier, May 13 issue, on the color of Partridge Wyandottes. No one regrets the vast difference in color between our English and your American. When I visited the States last summer I had in my pocket several hundred dollars which I wished to turn into Partridges, but as soon as I put eyes on them I saw they were of no use. I quite agree with what Mr. Ingalls says that a lighter color is much more beautiful both in the show pen and in the run. In the cock, especially in the beautiful contrast of color that we have in England, they are indeed a thing of beauty and attract every passerby. I saw the first American Partridges in Long Island—the owner, a farmer, told me that they had come from a noted breeder. I considered them rank wasters, but after visiting such noted breeders as Messrs. Wyckoff, Manley and Hadaway I found them to be really good specimens from an American point of view.

The matter of color was brought up to every one I met, and I found that there were more like Mr. Ingalls who considered them too dark, and wished they could be bred more into line with us. Now can not something be done in this direction? As it is you are turning away thousands of dollars that would have been spent with you. Only ten days ago I sold two of my hens for one hundred guineas—about $530—and the demand seems like lasting many more years.

I must say that the penciling and striping of your birds is quite as good as

ours, only ours show the color more to perfection, owing to the lighter ground color. I am happy to say the Australian and New Zealand fanciers are taking on to our color, and the demand from these countries promises to be brisk in the near future.

Fowl Cholera

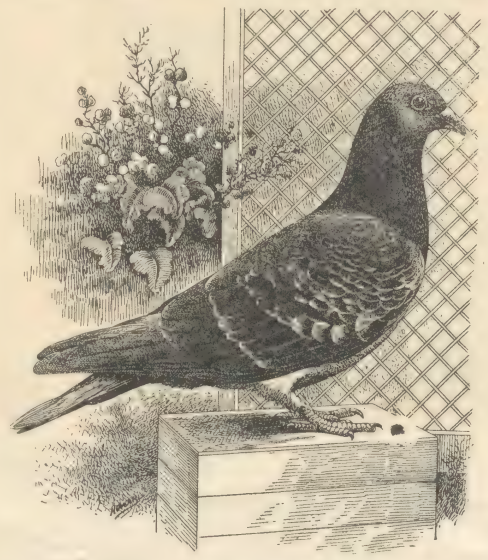
Mr. Archibald R. Ward, of the Experiment Station, State of California, has written an exhaustive article on fowl cholera, in which he states as follows:

"The results of observation and experiment lead to the conclusion that the disease is introduced into the body through food and probably also water infected with the bacteria, which causes the disease. Fowls eat their dead at every opportunity, which practise must be strictly guarded against during the outbreak. Contamination from the infected droppings is prevented by disinfecting the roosting houses daily and by feeding from troughs designed to prevent the fowls from walking in the feed. The same end is favored by moving the infected colonies to fresh ground. Possible infection from the drinking water is prevented by placing a weak solution of corrosive sublimate in the drinking water fountains. The prompt slaughter and thorough disposal of all the sick hens during the outbreak contribute toward preventing the spread of the disease. The evidence goes to show that fowl cholera is a comparatively easy disease to control, but disinfection must be continued after the death rate becomes insignificant."

The treatment recommended by Mr. Ward is to thoroughly disinfect the poultry houses with a mixture consisting of one-half gallon each of phenolene and crude carbolic acid to twenty gallons of water, this is to be used through a spray-pump, and while it is very efficient it will injure the hose pipe, which consequently must be renewed occasionally.

The use of this spray and perfect cleanliness at all times and preventing the infection of the water and the food by the fowls tramping through it is highly recommended. The solution used for destroying the bacteria in the water is corrosive sublimate to the strength of one part to two thousand parts of water. This destroys the germs, if any are in the water. It is also very apt to shorten the egg supply while being used. Tablets that can be bought at the drug store, containing a small amount of corrosive sublimate, should be used. Very little is thought of the manner of feeding or of the furnishing of medicine to cure the ailment.

Extermination of Rats



In reading in one of our exchanges the reply to a lot of questions as how best to be rid of rats we were attracted to some of them for their novelty. Some say mix flour three parts, plaster of Paris one part, and sweeten a little. Others advise the use of ferrets, gun and dogs, others say poison them, or to catch a live rat, then dip him in coal tar and turn him loose. One recommends catching a live rat, then dip him in kerosene, apply a match and let him go. We once had the experience of seeing a neighbor making a trial of this. The result was that the burning rat ran under the barn and set the barn afire. In an hour and a half neither barn nor rats were in evidence. One of the best ways to get rid of rats is to mix equal parts of flour and plaster of Paris with a little sugar and place it where the rats can eat all they want. This will kill the rats and if used in cold weather it will rid almost any place of the rats, that is, all the rats that eat this mixture are almost certain to die.

PIGEONS

The Homer

The Homing pigeon has been more discussed in the last few years than all other pigeons combined. The furore of growing of squabs has brought them so prominently before the world that anything that looks like a Homer has been picked up and sold for squab growing. The Homing pigeon that comes naturally from Antwerp, is used there and all over the world for flying races, carrying messages, in peace and war, and many other purposes. These are the best for squab growing and are bred for three distinct purposes

First, for flying races, both for long distances for prize medals and for pleasure. Second, the show or exhibition Homer is grown especially for fine points for the show room. Third, Homers of every kind, character and color, true bred, cross bred and mixed are kept for squab growing. It might be better if breeders would select them true to a certain color for squab growing and always have them the largest and best developed specimens they can get. None but the very best and strongest are ever able to compete successfully in the long distance races. Thousands that fail in their training are usually sent away to market and through this the survival of the fittest, the strongest and most vigorous Homers are the racing Homers of all countries.

BLUE CHECK HOMER

For squab growing one cannot make a mistake in selecting the discarded or unsuccessful ones that have been trained for long distance races and have been unable to win the prizes. Seldom, if ever, do the best fanciers use any flying Homers for breeding purposes except those that have been successful in races. If watchful, those in search for Homer pigeons for breeding squabs can pick up many of these during October and November of each year from those who breed for racing purposes.

Proper Food for Pigeons

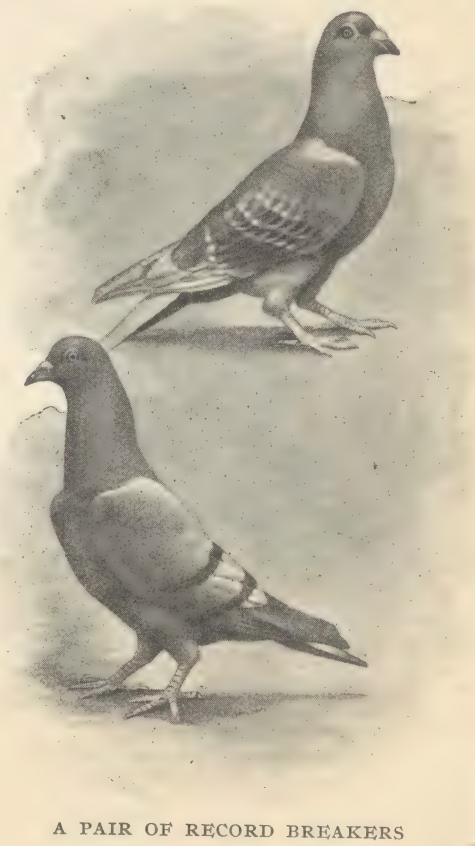
The diet of the pigeon should be varied; but corn, wheat, and Canada peas, well mixed, will be a good food all the year around, although it is well to feed at different periods buckwheat, hulled oats, barley, rye; in fact, any grain will be found acceptable to the birds. During moulting season—which begins about the middle of August and lasts nearly up to October 1st—flax-seed may be fed with impunity, as it aids the birds in throwing off the old feathers.

Always keep a hopper, out of reach of being soiled by the dropping from above, in the cote in easy reach of the birds, filled with oyster-shells ground fine, mica grit, and egg-shell, in equal proportions. This hopper will need replenishing at intervals, as the birds consume a quantity of grit. A salt cat is recommended, and can be made thus: Take a shovelful of old mortar, put this in a box and pound as fine as possible, adding a shovelful of gravel, a few handfuls of Portland cement, about ten pounds of ground oyster-shells, eight or ten pounds of mica grit, about a pint of burned bone, and a quart of coarse salt; mix thoroughly and put before birds in a dry state.

Fresh water should be in the cote, and when possible arrange that the drinking fountain be attached to the water-main, as too much care cannot be taken that the birds at all times have free access to fresh water.

Notes on Squab Culture

The pigeon fanciers, not only in Washington but all about, are beginning to worry as to the possibility of laws being passed by the local government of the towns preventing pigeons from flying at large. These matters should be considered in advance. We presume that there are about one hundred sparrows to one pigeon in any town; and are confident that about a thousand sparrows are flying about bothering people to one pigeon that is permitted to fly at large. As long as the city fathers permit the sparrows to be a public nuisance, it is rather far-fetched to pass a law to shut up the few pigeons that are permitted to fly about.



In raising large Pouters, English Carriers and Runts, it was always the habit of the writer to have a lit of fine Homers for feeders. When the Pouters would lay, the eggs would be placed under a pair of Homers, and the Pouters given the Homer's eggs. As soon as the Pouters were hatched and were a day or two old, transfers were made in the different nests so as to have but one young Pouter for each pair of Homers to feed. Carriers were handled in the same way. In this manner we were always able to raise nearly all of the young that were hatched, and they grew fast and were remarkably large.

The sanitary condition of the pigeon house, loft or cote, as we may call it, should always be sufficiently good so as not to even seem obnoxious to any one. A good old-time fancier does not object to the odor of the loft; strangers and visitors are more particular. Unsanitary conditions are never of advantage to the young pigeons. Young birds and fowls are much more sensitive than are the old mature specimens.

Above all things, never feed cheap, unsound grain to your pigeons.

Some people will laugh at us, but we used to feed our pigeons once or twice a week on bread and crackers soaked in milk, and drained dry in a colander. They liked it and grew upon it. It was a nice change to induce them to feed the young just at lunch time.

Many a young squab has been saved through hand feeding at night a little with some bread and milk. Have the bread thoroughly softened and squeezed quite dry, and it is easy to hand feed the young squabs that are starting in for the night with an empty or partially filled crop.

A PAIR OF RECORD BREAKERS

We notice that one of the experts tells us that blood relationship should not be tolerated in growing pigeons for profit. Perhaps the writer means, if you want to grow good healthy squabs, have non-related pairs. This is all right for growing squabs, but does not work well in the fancy.

The Runt is the largest of pigeons, but is not as easily handled as others. They move around more like a duck than a pigeon. They drag their tails upon the floor, and if there is any dirt or filth about, they will pick it up with the tail feathers.

We notice that one of the writers in the large journals says that Runts will not produce as many squabs as other pigeons. Seldom do they produce more than four pairs per year. Four pair of squabs for a pair of Runts would be a splendid year's work. At the same time we know of a working loft of Runts that averages better than this; but they have been bred to the business.

"Never catch a bird in the day-time, unless absolutely necessary. This alone will make tame birds wild," writes one of our contemporaries. This is splendid advice as pigeon lofts go. It is always a mistake to frighten a whole loft in an attempt to catch one of the specimens, but we know of a friend who has a loft of pigeons, almost any one of which he can pick up off the floor, they are so tame. This is a good way to have them, and then there is no danger in the attempt to handle them.

Be sure and have sufficient room for the feed box and drinking fountains. Better have surplus room supply for this than to have any go hungry or without drink.

BOYER'S TALK

Notes in Passing

While an egg is a masterpiece of creation, the feather is equally wonderful, as it combines lightness and complete ventilation, is an excellent non-conductor of heat, and repels dirt.

Successful poultry raising calls for the exercise of intelligence, industry, common sense, patience and eternal vigilance.

We have yet to find the first lazy man that made a success of the poultry business.

The Maine Farmer says the poultry business cannot be overdone. There is a market for all the poultry of the right kind that can possibly be raised. The statement is made not as a startling bit of newly discovered truth—called out by an anxious inquirer, who fears that he simply may flood the earth with chickens if he starts in the work.

G. O. Brown some years ago wrote that it is a sad commentary on a man's humane ideas to compel a flock of poultry to roost for a week in an odor-laden atmosphere of droppings accumulating during the period. You may strew ashes, road dust, land plaster or what not over the bed of filth each morning, but the odor will grow stronger and stronger. Then when the weekly cleaning takes place it is not necessary to go inside the house to know what is going on—the fact is smellable some distance off. This odor finds its way into every crack and crevice in the house. Adopt a rule to clean up the droppings each morning, and you will not only have a pure atmosphere in the house, but you will nip contagious diseases in the bud, and give lice so much trouble that they will bother your premises very little if at all.

Discharge the man who will not obey orders.

As the care is given, so is success meted out.

Keep a strict watch on the condition of your stock.

If you adopt a good system, and then follow it closely, much time and labor will be saved.

Paint will not only ornament the buildings, but add to their life. It is poor economy to save on this item.

A lazy man will allow the hinges, pump and wheel-barrow to squeak. A single drop of oil will quiet the disturbance.

A drop of oil on a "cranky" lock, will often right the trouble.

If you are beginning to cull out your stock, keep over for next season's breeders none but the strongest and hardiest birds—first looking up their record.

Lack of record makes poultry on the farm a veritable nuisance.

I. K. Felch says the fancier and practical poultryman are getting closer together. The poulterer now raises thoroughbreds, and sells his best pullets to the fancier. In this way both wings of the poultry industry flap together.

While it is a fact that poultry culture, being a healthful and profitable occupation, is fitted for those who need outdoor life, it is useless for any one to engage in the business unless he has a natural love for the work.

The men who depend on "luck" will never glut the poultry market.

While it is advisable to make the poultry plant cost as little as possible, it is poor economy to sacrifice convenience or proper conditions just because there is a little expense attached to them.

J. A. Tillinghast says the beginner must be on the alert for every new idea in the business, but not be greedy and attempt to swallow more than he can digest.

It is the seasonable work that counts in poultry culture. Be careful not to get behind time.

The man who will start in the business with dunghills is very apt to always be a dunghill himself. Start right.

Is it not unreasonable for anyone to suppose that notwithstanding the fact that they have failed in every other business, they can make the poultry business a successful occupation?

Do not allow rubbish piles near the poultry buildings, as they form hiding places for rats, weasels, and other poultry enemies.

What has become of the White Wonders and the Sherwoods? Well, we never did need them. The former is not to be compared with the White Wyandottes, and the latter cannot take the place of the White Plymouth Rocks.

A truthful saying by Curtis is: Wise is that person who learns early in life to profit by the experiences of others.

There are more dangerous people in this world than poultry cranks.

Just as soon as you begin to lose interest, get out of the business.

The man who will neglect his poultry on the first day of the week because it is Sunday, hasn't got any Christianity to spare.

"Be not the first by whom the new is tried, yet not the last to lay the old aside."

Energy is a most desirable factor in this business, but if not controlled by common sense, it will be a waste of forces given to be utilized.

A poultryman cannot be made in a single season, and there is always a lot to learn. Whenever we meet one who very kindly assures us that he knows it all, we smile and walk on. We never did appreciate the company of the all-wise.

In selecting a new breed, ascertain, if possible, if it is adapted to your climate. As a rule, all our American breeds are adapted to any section, but this cannot be said of all breeds.

There is no short cut to success. A steady, sturdy, persistent effort is required to place a men on sure ground.

"Happy-go-lucky" methods may serve their purpose for a time, but the time is limited.

A business hen is neither excitable nor lazy—neither is a business poultryman. In this respect the natures of men and hens are the same.

Plan ahead and be up to the times. Some men never stop to think, and when a circumstance presents itself they do not know how to handle it.

Drones are an eyesore and an expense—and this applies to men also.

Let your aims be high. Always strive to get on top. The man who is content to stay at the bottom of the ladder never makes a reputation for himself or his business. We have too many of that class now.

The Egg for Incubation

White-shelled eggs can be tested on the fourth day, but the average lot of eggs not before seven days.

Old eggs need more moisture than fresh ones, as the air cell is larger. If possible, have all eggs as near an age as possible.

Mixing eggs of different varieties in the incubator is apt to cause a poor hatch. So also are large and small eggs in the same lot.

In incubation, the greatest excess of heat for a short period, says Cyphers, can probably be withstood after the sixteenth day, when the growth of the allantois is completed.

The air cell of the egg on the fifth day should measure about one-fourth of an inch; on the tenth day, one-half inch; fifteenth day, five-eighths inch; nineteenth day, three-fourths inch. Take measurement from middle of large end.

Unreliable eggs for incubation are those undersized, extra large, double-yolked, rough-shelled, thin-shelled, mottled shells (uneven marbled-looking shells) and eggs with a ridge around them.

Prof. Wheeler says that unless the eggs are graded much more evenly than seems possible in general practice, a slight percentage of loss of the fertile eggs is unavoidable where a large number of eggs are hatched in one machine.

A small egg has much more shell surface in proportion to contents than a large one. To run the machine to suit the small ones will be too damp for the large ones, where moisture is used, and vice versa.

J. L. Campbell claims this method safe for determining the moisture in eggs. At the end of two weeks put them in warm water. If they sink they are too moist; if they just float, they are a little too moist; if they float high, they are too dry; but if they float with a space above water which could be covered with a twenty-five cent piece, they are about right. This is only an average, however.

At Luna Park, Coney Island, they have started an incubator exhibit, under the direction of friend Russ, of Vesey Street, New York City. Mr. Geo. W. Nones is the poultry expert in charge of this display. There are two thousand eggs in the incubators, and the contemplated program is to have young chicks hatch every day during the summer at this place. All poultry fanciers who visit Coney Island should look up this display.

Editorial Gossip

The question as to the elimination of some advertisers from the magazine columns has been thoroughly discussed of late. A paper that takes advantage of the second-class mailing rate becomes a servant of the people, and any one who wishes to do so may claim the right to advertise therein, provided he is willing to pay the bills. At the same time, all papers should endeavor to weed out all unsatisfactory, undesirable advertisements and have nothing within the columns of their paper that might mislead or injure their subscribers in any way. No editor or publisher, however, can tell when the copy reaches him whether the articles offered, or the one offering them, is up to the mark or not. It has always been the policy of the editors of this paper to endeavor to have only the best line of goods offered for sale through our columns.

We hear so much of the great oversized poultry plants that one would imagine that the only way to make money out of the keeping of poultry is to have a great big five or six thousand hen farm; but the facts are that there are but few of these very large plants that have ever paid. One man is capable of attending to about one thousand hens. If this man is an expert in attending to his poultry, he will make money. Two of equal capacity and push would make money from two thousand: the same with three, four, five or more, that understood the business. The trouble with the large plants is that the help must be employed as you can find it—some good, some not so good; and frequently the undesirable assistants use up all the profit in the business that is made by the others more able to attend to the stock. With the proper management a few thousand hens can be handled just as well as a few hundred. But it is necessary to have management and thorough organization to make money from so large a number.

The duck business when thoroughly understood, seems to be easier to manage in large numbers than does the broiler or other poultry specialties. Many have succeeded in raising from twelve to forty thousand broiler ducks in a single year, and have made money from them, while others have been less fortunate. The poultry business along all lines depends largely upon the ability of the management.

In the minds of a number of editors of the poutry press there appears to be some doubt as to the possibility of the new Standard being ready for delivery by the first of August, as promised. We are not surprised that the poultry press editors feel as they do about this, for the many delays have not only surprised those in charge of the Standard, but have surprised every one who knows anything about the matter; yet we must remember that it takes a long time to make the illustrations, and the meeting at Rochester was so determined that but one artist should have charge of the illustrating that the only thing left to do is to wait the convenience of the artist to make the illustrations. While it is but natural to expect that people will be irritated about the delay, at the same time it is far better to have a good, strong, well-published Standard than one with as many flaws in it as have been in the former editions of the book. We remember hearing it stated in an open meeting of the American Poultry Association that a proof-reader had found over a thousand errors in the last issue of the Standard. Perhaps that same proof-reader will be after the next issue, and we trust that when he does, he will find so few errors that it will be a gratification to the whole fraternity to know that we have at last in our possession a Standard that has been so well edited, revised and printed as to exclude all unreasonable erors at least from its pages. What we want is a good, strong, well-executed job, and after it is finished to retain it for all time to come.

Cooperation in selling poultry is in the air. Those who go into such organizations are usually dissatisfied with the results. We remember but a few years ago when a lot of breeders banded themselves together in one locality, and appointed one of their number as "selling secretary" of the association. When orders came to hand, he naturally filled them from the member of the organization that would furnish the best stock for the money. This fact soon caused considerable contention, and before a single year had passed the organization was dissolved, and each member was back attending to his own sales and doing the best he could for himself. Naturally any organization of this kind would always sell that stock which was most likely to prove satisfactory to the purchaser. Those who go into such an organization should do so with the understanding that they must furnish better stock than ever before to hold trade. And even then, orders would naturally be filled with those in favor, or those nearer to the purchaser. We do not believe that injury will come to any one through such an organization. The poultry business is a peculiar one. People purchase from those in whom they have confidence; and to succeed in handling or selling Standard-bred poultry, one must be ever cautious of his reputation and only send out the best.

Much is being said lately about the growing of poultry in Russia. A friend of ours, who traveled through the entire Orient, tells us that it is surprising to see the number of eggs that are shipped from the stations along the lines of the Trans-Siberian Railroad. These eggs, he tells us, are brought to the station by the producers, who take a receipt for the eggs furnished from the station agent, who is usually a member of the Russian army. All the eggs brought to this shipping point are packed and shipped in lots over the railroad to Moscow, St. Petersburg and Berlin. The returns for the shipments come back to the station agent who takes up the coupon receipts from the producers and pays him his part of the shipment. It costs very little to make these shipments—about as much to ship clear across the empire to Berlin as one must pay for a shipment from Buffalo to New York.

The Ruralist states that success is more in the man (or woman) than the breed. "Some people can make money with the dung-hill sort." We used to be worried over such statements, but when we stop to consider that scarcely five per cent of all the people in the United States have learned by experience that the standard-bred poultry, well managed, will produce about five times as many eggs as will the dung-hill sort, we are not surprised to find a rural paper upholding the should-be-forgotten old-time barn-yard fowl.

The same paper asks the following question: "Where do the hens get the chalk that enters into the composition of their eggshells?" It is estimated that the eggs produced by a hundred hens in a year contain 137 pounds of chalk. Eggshells are a very pure lime product. This is gathered from the mineral portions of their food; also from the clover hay, from the grinding of the grit within the crop, and the eating of oyster shell and particles of lime, all of which is ground up through the gizzard, taken into the system and divided off into the ovaduct in a kind of a semi-liquid form which is coated about the egg as a covering just prior to the time of its being laid.

We notice a new idea on gapes. The writer states that this is the season of gapes, and cold, rainy weather makes them worse. He adds that a little sulphur mixed in the chick's food is a good preventive, also that a few drops of nux-vomica in the drinking water is beneficial. The experience of years has taught those best informed that no internal remedies in the way of medicine are of any value whatever for preventing gapes or destroying the gape worm after it has once lodged in the wind-pipe. Feeding naphtha in the food will destroy the gape worm, but it often destroys the young chick at the same time. The best way to cure the gapes is to prevent their coming by keeping the ground over which the chicks run thoroughly cleaned and free from contamination.

"Fur, Fin and Feather," a new paper devoted to these interests, has for editor of its bantam department, Mr. Charles T. Cornman, who states in the May issue of that paper that there is so little to be found in the poultry papers with reference to bantams that he is awfully glad to know that Brother Howard is disposed to push along the interests of these little fellows in his worthy publication. We are very glad, indeed, to acknowledge this courtesy from Mr. Cornman, but the readers of the papers that go from this office know that every kind and quality of poultry, large and small, has its fair chance in the columns of our publications; that we do not favor one to the excusion of another, and we trust that all our friends will realize this and assist us in making our papers better and better each issue.

For once at least, the American Reds are in the lead. The report comes from the Kansas Agricultural College that in the yearly egg-laying contest a pair of American Reds took the lead at the start, and still stick to it. We are at a loss to know how this could have been, as the test began last November and the American Reds were not named until January. We presume that this is another case where the Rose-comb Rhode Island Reds adopted the new name. But, be this as it may, we congratulate the State of Kansas on inaugurating an egg-laying contest in opposition to Australia.

Begin at once to clean up the poultry houses and to fight hen lice. This is a case where you must begin today, continue tomorrow, and keep at it the next day and find some new means of attack each day until winter comes.

A SPECIAL
Combination

In order to more thoroughly complete our plans of organization, we have decided to make this Special Combination Offer to all lovers of Poultry and Pigeons of

The Feather and
The American Fancier

ONLY ONE DOLLAR for BOTH PAPERS for a WHOLE YEAR

We are positive there never was a better opportunity for securing the Cream of Poultry and Pigeon Literature than is to be found in this combination. You get a paper every week edited and illustrated by the best talent in the country. It is a rare chance, and you can not afford to miss this combination. Send a DOLLAR BILL without delay and have your name on our list. Address,

The HOWARD Pub. Co.
714 Twelfth Street N. W.
WASHINGTON, D. C.

Major Theodore Sternberg was unable to make the trip East last week, but writes us that he will be in attendance at the New York and Boston shows next winter.

Mr. C. A. Snyder, the well-known breeder and fancier of Light Brahmas in Waynetown, Indiana, has retired from the fancy, having sold his stock to I. N. Barker & Sons.

The New England Farm Stock Co., Greenfield, Mass., has put out over 5,000 eggs this spring to persons who agree to hatch the same and raise the chickens on a percentage plan. This is a remarkable record, considering the fact that the new company only started a short time ago.

"We do not favor dry food or only grains for raising chickens, believing in mash once or twice a day. We notice in quite a number of the advertisements of different dry chick food that they say bowel trouble is unknown when our dry chick food is given, from the number of letters we have received during the past two months who have used this food. They also sent samples of the food they were giving. Needless to say we have not been converted to the dry feeding system." —The Orpington Poultry Journal.

Dry chick feeds have come to stay. If Editor Cook will come up to the wilds of Northern New York, we can show him hundreds of thrifty, healthy chickens that never had mash food, but were fed the dry mixtures from the day they were able to eat. Dry chick feeds, pure clean water, shade, a nice grassy run, shelter at night and during storms, clean roosting places and coops, good hen mothers or brooders, freedom from lice, and you have the whole system in a nutshell.

There seems to be an impression among some people, and breeders of Cochin Bantams in particular, that soft food is better for growing feathers than hard grains, and we have been asked what is the best food of this kind. Spratt's make an excellent meal that fills the bill completely. This is already prepared, and although its cost is a trifle more than a home-made meal, it is well worth the extra outlay. A good safe mash can be made of one-third winter wheat bran, one-third corn meal, and one-third ground oats or barley. We believe, however, that the addition of a little rape seed to the hard grain mixtures and feeding Kaffir corn several times a week will grow the feathers to the "queen's taste."

"Luther Burbank is doing great things in the cultivation of flowers," said the contemplative restaurant man. "He is making purple flowers grow red, and red flowers blue, doing all manner of wonderful things with plants, and all fine and beautiful, but what the country really needs is a chicken raiser who can make chickens grow all white meat."

The above reflection starts one of those amusing and readable articles so frequently found in the New York Sunday Sun. We certainly can feel with the restaurant man, especially when he furnishes facts and figures regarding the demand for dark and white meats. It seems his customers are very unreasonable and he is of the opinion that what is wanted in his business is a chicken that is all white meat, and the man that can produce it would not only confer a boundless favor upon the suffering dispensers of chickens, but would become rich beyond the dreams of avarice, wealthy beyond the veriest nightmares of greed. "That's what the country needs, a chicken raiser who can make chickens grow all white meat," is the way he concludes his remarks. Here is a chance for the solon of the Hub to earn undying fame. But white meat has his limitations, especially when called for at some of the third-rate first-class country hotels. At one of the latter the white chicken meat consisted of wings, and the hens that once owned these angelic adjuncts were not in the kindergarten class. After several days of this chicken diet, a poultry fancier remarked to the waiter: "Kindly omit this angel food in the future and bring us some real meat, red, black, brown, or any other color, something we can at least imagine as being once associated with a chicken that has not entered the bald and wrinkled age."

Editor Grant M. Curtis in the June Reliable Poultry Journal has two exhaustive and timely editorials on subjects of vital importance to the American Poultry Association. The one deals with the liability of the latter in the matter of a note of $500 given by the ex-secretary, Bridge, to Nitzky Bros. in payment for Standards printed by the latter firm; the other touches up the negligence of the officers in not requiring the secretary-treasurer to give the bond called for by the constitution and by-laws.

At the Minneapolis meeting of the American Poultry Association, considerable debate was created over the $500 note, Mr. Kimmey holding that as the note was a personal one given by Bridge, it was not up to the society to pay it. Mr. Wickey expressed himself even more forcibly and did not believe in paying a debt twice, intimating that Nitzky Bros. were parties to the transaction with Bridge, etc. Both Mr. Kimmey and Mr. Wickey are lawyers and looked at the matter from a legal standpoint. Mr. E. G. Wyckoff and Mr. Theodore Hewes looked at it from a moral standpoint and believed the debt should be paid. And that was the sentiment of the majority present.

We agree fully with Editor Curtis when he states:

"The question has been raised that the association ought to pay this money, or note, twice. It hasn't paid it once! It allowed the public to send money for Standards to Mr. Bridge, but Mr. Bridge did not use this money to pay Messrs. Nitsky Bros. the $560 the association was owing them. They weren't paid at all. The association, through its agent, received the books represented by this $560, and then supinely allowed its secretary-treasurer to embezzle the $560 instead of paying it to the men to whom it should have been paid. No amount of quibbling on the part of the lawyers can change these facts. Facts aren't built that way. We agree with Mr. Hewes that it ought to take until doomsday, and a week longer, to convince any member of the American Poultry Association that this isn't a just debt."

This $500 can and must be paid without hesitation on the part of the executive committee, and paid as soon as the necessary funds are forthcoming. The quicker the insinuations and charges of collusion against Nitzky Bros. are smothered the better. It's a very small piece of business to be engaged in by some members of the American Poultry Association.

Mr. Bridge, the ex-secretary, gave a bond. Like the assets of the A. P. A. he was custodian of, it was worthless. It was not even a case of frenzied financiering; it was a neglect of duty on the part of the auditing and finance committees. Total cost of negligence: about three thousand dollars. The fact that Secretary T. E. Orr has not furnished a bond has given rise to the opinion that some of the financiers of the A. P. A. are not very much in love with the bonding business. Article IV of the by-laws of the American Poultry Association reads as follows:

"The secretary and treasurer shall make general reports of the financial condition of the association at the regular meetings of the association, and he shall give bonds, to be approved by the finance and auditing committee, for the faithful performance of his duties."

In spite of the above plain duty, the secretary-treasurer refuses to furnish the

Gallery of Fame

A. L. SPARKS

MR. A. L. SPARKS is most popular among the New Jersey fanciers. His untiring energy built up the Newark show to its present standard. His heart is wrapped up in Wyandotte shape and quality, and his love for the best has gathered in his locality Wyandottes of national fame. Wherever he goes his host of admirers are ever ready to welcome him with expessions of true friendship. Nothing can better express our good feelings for him than to place our artist's beautifully executed portrait in the Gallery of Fame which is now so popular with the entire poultry fraternity.

bond required of him. That the finance committee has been advised of this is evident from the following comment made by Editor Curtis:

"As for the finance and auditing committee, while there is nothing specific in the constitution and by-laws which makes it the duty of this committee to demand a good and sufficient bond from the secretary-treasurer, it is natural that the members of the association, in view of the wording of Article IV of the by-laws, as above quoted, should expect the finance and auditing committee to see to it, provided the president neglects his duty, that the finances of the association are properly disbursed, accounted for and safeguarded. Those are prime objects of a finance and auditing committee. It was on account of this understanding of the matter that the writer of these lines, on learning several months ago that Secretary-Treasurer Orr was not under bond, wrote to Mr. H. V. Crawford, as chairman of the finance committee (which committee consists of Messrs. H. V. Crawford, Frank B. White and D. Lincoln Orr), calling attention to the fact, and insisting that Mr. Orr be required to furnish a bond. As late as May 18, 1905, Mr. Orr had not complied with Chairman Crawford's repeated requests."

The president's duties are defined in Article VI of the by-laws of the American Poultry Association as follows:

"Should the secretary-treasurer neglect his duties to the detriment of the association, it shall be the duty of the president, or any member of the association, to call attention to the same, and the executive committee may call on him to resign, or may declare the office vacant and appoint his successor to serve out the year. In case this is done, the retiring officer shall not receive any salary for the year in which he is displaced."

This is clear and to the point. The president can act if he choses to; if not, any member can do so. Mr. Curtis has availed himself of that privilege and requested of the chairman of the finance committee that the secretary-treasurer furnish a bond, with result noted above.

During the coming year, the secretary-treasurer of the American Poultry Association will handle thousands of Standards, involving thousands of dollars. Every dollar taken in will be needed to pay for the new Standards and outstanding obligations of the society. This alone is sufficient reason for the president to act with the finance committee in requiring a bond, covering an amount to be determined by approximating the possible revenue for the ensuing twelve months. Should the secretary refuse to comply with this demand, he ought not be allowed to continue in office. This is written without reflecting in any shape or manner on the integrity of Mr. T. E. Orr, the present secretary-treasurer. We believe him to be an honest man and one who has tried to manage the finances of the American Poultry Association to the best of his ability. But this is not a question of Mr. Orr's honesty; it is a matter of cold-blooded business and common sense. As a loyal member of the American Poultry Association and in justice to himself, Mr. T. E. Orr should furnish the bond without further delay. It is up to him.

Editor Ely in the Ohio Poultry Journal remarks:

"Of the forty-four members of the American Poultry Association who attended the recent meeting at Pittsburg it is said fully one-third were from Pittsburg and its vicinity. This is about the proportion that might naturally be expected. Men will go fifty or one hundred miles to attend a meeting of that kind, but few can make a journey of five hundred or eight hundred miles for the same purpose. Local representation is always large at these meetings and local influence accordingly colors the proceedings."

This is in the main correct, but when the list is carefully looked over, the members traveling hundreds of miles loom up in goodly numbers at the Pittsburg meeting in the matter of attendance. The members attending from the following States were: New York, 9; New Jersey, 2; Massachusetts, 4; Illinois, 4; Indiana, 3; Ohio, 4; Pennsylvania, 15. It was a splendid showing the latter state made at what might be called its home meeting, and its members did much good work during the strenuous sessions held in the Smoky City.

Brother Ely's comments clearly indicate, however, the crying need for an annual meeting of the American Poultry Association where hundreds of members can be in attendance instead of dozens, as has been and now is the unfortunate rule. Efforts are being made to bring about such a condition of things in the near future. An annual gathering of representative poultry raisers of the United States and Canada in the rosy month of June at some cool and centrally located summer resort would be an event, not only of pleasure and recreation, but of immense importance to the poultry industry of America. Being away from the attractions of the show room, time will be plentiful to discuss and legislate on all matters before the meeting. The cry of the few legislating for the many will cease and the chances are that less hasty work will be performed than at the winter sessions, where oftentimes a member is more interested in looking up defects in some other fellow's birds than in the business of the association.

An interesting account of the life deeds and misdeeds of Henry Bailey Tams, who died recently at a wayside inn in Cambridge, England, from an overdose of laudanum, appears in the current issue of Poultry, England. Probably no man ever cut a wider swath in the chicken business than this same Tams. He was a brilliant swindler, to say the least, and was known under several aliases, the latest one being "Lord Queensbury." Prior to this he advertised extensively as one Meroyn D. Paternoster. He will be remembered in the United States as the manager of Mr. W. K. Vanderbuilt's poultry farm in 1886 or 1887. During Mr. Vanderbuilt's absence in Europe, Tams deliberately sold out all the stock, pocketed the money, and left the country. Among the stock sold were quite a number of imported Houdans, and they were really splendid specimens of the breed, large in size with fine crests, bred much lighter in color of plumage than the American birds shown at that time. Mr. Vanderbuilt evidently became so disgusted over this deal that he gave up the poultry business and the fancy of America lost a valuable patron. Rascality and incompetence of trusted managers have driven more than one wealthy patron from the Standard-bred poultry business, the Tams case being only one out of many.

Our esteemed English contemporary, Poultry, editorially remarks:

"The German buyer of the American Rose-combed Minorcas, to which reference was recently made in Poultry, is apparently hiding his newly-acquired treasure from public gaze. Although at the time of the transaction the American Reliable Poultry Journal gave an illustrated description of the deal, we cannot find the name of the purchaser in any of the German poultry papers; and it is interesting to know that the only account of the transaction came to those publications via London and New York!"

Although the name of the purchaser in Germany is not known to us, the sale made to him by Mr. Geo. N. Northup was a bona fide one as was the check received by the latter from the German buyer.

Those who bought a lot of new store boxes and turned them into hen coops this spring, are likely to have a nice healthy lot of young stock. Those who made use of the old, dirty, lice-infested coops will have the other kind.

Dates Claimed

September 5 to 8, 1905.—Brookville, Pa. H. A. Emmel, Mars, Pa., judge. F. B. Henderson, secretary.

September 12 to 15, 1905.—Greene, N. Y. Riverside Agricultural Society. C. Winston, secretary. L. J. Hall, supt. poultry.

December 7 to 9, 1905.—Stewartville, Minn. Stewartville Fanciers' Association Poultry Show. George D. Holden, judge.

December 14 to 16, 1905.—Rutherford, N. J. Rutherford Poultry, Pigeon and Pet Stock Association. E. J. Irwin, secretary.

December 18 to 23, 1905.—Concord, N. H. New Hampshire State Poultry Association. H. C. Shaw, Milford, N. H., secretary.

December 26 to 29, 1905.—Marietta, Ohio. H. A. Emmel, Mars, Pa., judge. A. I. Spencer, Parkersburg, W. Va., secretary.

December 27 to 29, 1905.—East Palestine, Ohio. East Palestine, Ohio, Poultry Club. C. F. Early and Phil Feil, judges. Wm. Haught, secretary.

January 15 to 20, 1906.—Oshkosh, Wis. Wisconsin State Poultry Association. Charles McClave, judge. Frank W. Radford, secretary.

January 16 to 20, 1906.—Charlotte N. C. H. P. Schwab, judge. W. B. Alexander, secretary.

February 19 to 24, 1906.—Pittsburg, Pa. Pittsburg Fanciers Club. Chas. McCleave, S. Butterfield, G. O. Brown, judges of poultry. G. T. Erbe, A. J. Edwards, judges of pigeons. G. C. Sutch, secretary.

PARTRIDGE WYANDOTTES

ARE WITHOUT DOUBT THE COMING BREED

Many of our leading fanciers have started in to breed them this season, which is one of the proofs of the above assertion.

For beauty and utility they have no superiors, and when reliable stock is obtained they breed true to color and markings, and are the breed that a new beginner should start with as well as the experienced fancier. They are also the poor man's friend, as they will fill the egg basket, if properly fed, when eggs bring the highest prices.

Eggs are very fertile at this season of the year, and many prize winners are hatched during the months of June and July; so send in your egg orders at once. They will cost you $5 per 15; $8 per 30; $10 per 45.

In order to make room for growing chicks I will sell 200 exhibition and breeding birds at half price, a part of which will be delivered immediately and the balance after July 1. Remember, my birds won the lion's share of the most coveted prizes at the largest shows last season, and that both my prices and quality are right.

J. B. HADAWAY
609 North Main St.
Brockton, Mass.

"EGGS, BROILERS AND MONEY"

Is the title of a book that tells the breed of fowl with which you can make money. It is a general talk about eggs and broilers based upon an experience. Free for the asking.

LAKEWOOD FARM COMPANY (Inc.)
Burrsville, New Jersey

Breeders of Lakewood Farm Layers, etc., Great Profit Payers.

A Paper Incubator.

150 Egg Capacity.
Weight, 80 Pounds.

HENS SECRET DISCOVERED

This Incubator is a Wonder and the Leader of All Incubators.
Does not require an expert to get a successful hatch.

Made of Paper—the World's best-known Non-Conductor.
As strong and durable as wood.

TESTED. SUCCESSFUL. PRACTICAL. GUARANTEED.

Will heat up in any outside shed in zero weather in one hour, and will use from 50 to 75 per cent less oil than any other incubator on the market.

No even temperature necessary; any temperature between 95° and 106°, like the hen's, will secure a 90 to 100 per cent hatch of fertile eggs.

Our Regulator is ions of air and an even heat not necerrary.

Our Brooders—on the market for the past seven years—have demonstrated to the most exacting that they can raise in them 95 to 100 per cent of chicks.

BEATS THE MICHIGAN HENS 3 TO 1
All Other Makes of Incubators a Failure in the Test

Sherman City, Mich., May 9, '04.

Perpetual Hen Co.

Your incubator has beaten all records here. There are five different ones largely advertised of the non-moisture kind of incubators here in this city. Nine of my neighbors also set hens at the same time I set the incubator to beat me. The result was that I beat the hens three to one, and all incubators so bad that it was not worth figuring. Some made a complete failure and all will make fire wood of the incubators and buy your make next season. Your brooder cannot be improved upon as it does the work simply grand. Very truly,

E. R. McDowall.

This poultry man put our brooder fixtures in a complete failure brooder and the above letter does the talking for us.

Send stamp for "1905 Price List and Customers' Reports," or 15c. in stamps or money for a 96-page catalogue, "The Hen's Secrets and Nature's Laws."

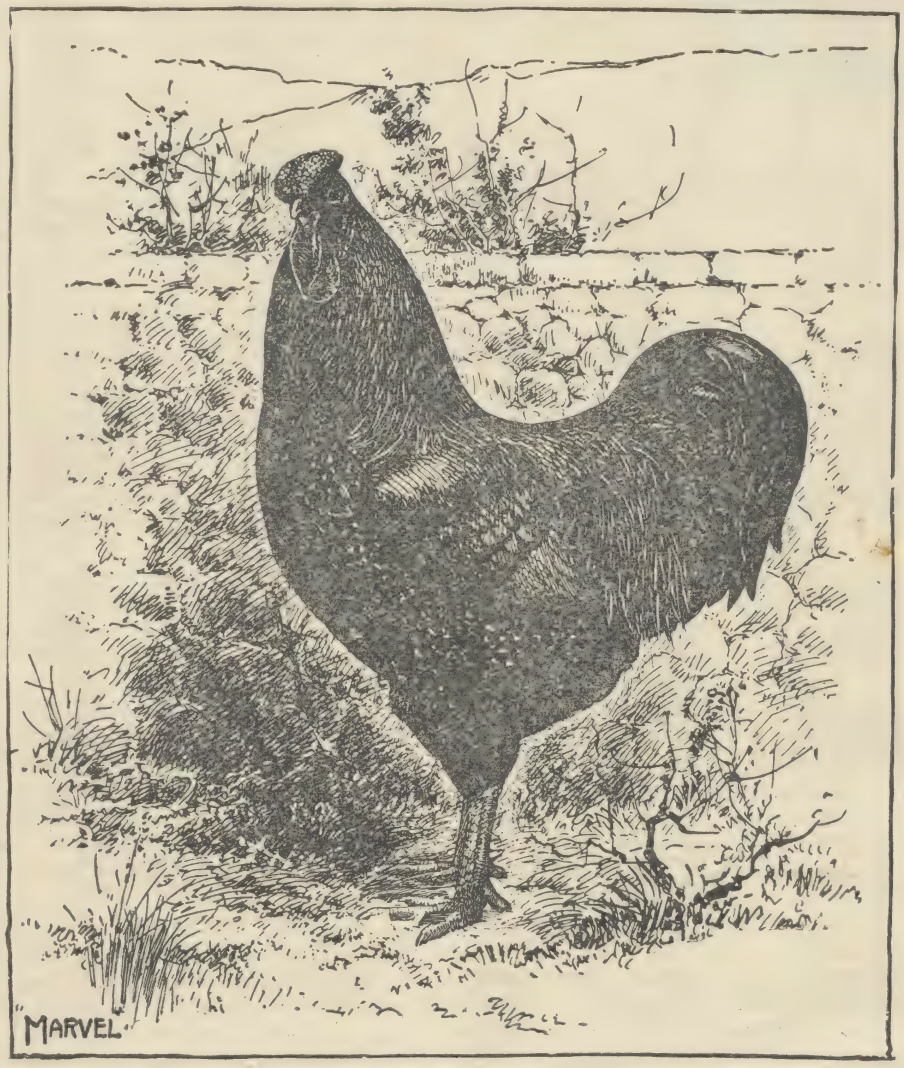
The American Fancier

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV Washington, D. C., July 8, 1905 No. 614

LATE HATCHED CHICKS



The season having been rather backward, we imagine that there will be more efforts made for hatching chicks late in the season than is usual in this country. If these late hatched chicks are properly cared for, it will be possible to grow them to a fairly good size before the advent of winter. We have known Cochins and Brahmas to be hatched in July, and win prizes in the show-pen in January. It is not unusual for many of the pullets that are shown in the American classes in December to be hatched late in June or early in July. Such specimens, however, are the result of careful attention and feeding.

The above refers more generally to the chicks that are hatched the last week in June and during July. With some breeders these would not be termed late hatched chicks, so we must endeavor to assist our readers in caring for chicks hatched even later than this. Many of the Bantam fanciers do not hatch their Bantams until the first of September, some of which are shown in the January and February exhibitions, and are among the winners.

When you hatch the young chicks after the first of September you should provide board floors for the coops and houses within which the mother hen is kept with the brood. These board floors should be so placed as to permit of a covering of an inch or more of dry earth or sand over them to keep them sweet and clean. Such a house provides a dry, warm floor for the young chicks during the entire fall. We have known store boxes, three or four feet square, to be used for the mother hens and broods late in the fall, in which the hen has stayed the entire winter with the brood, and made it the home of herself and her chicks. This supplies a fine lot of young pullets and cockerels, as well as the means for the producing of market eggs during the spring and summer months. Many of these late hatched broods are used as market poultry, and sold for broilers, frying fowls and two pound dressed poultry during the winter months. Being young and delicate, they are very much sought after in the high-class markets.

The secret of success with these late-hatched broods is to locate them in a part of the farm or poultry yards separated from the other fowls, where the young chicks may have a pleasant run to themselves in a location that has not been used by other poultry during the summer. Such places provide a good feeding place for the young chicks. If these chicks are very strongly fed—say five times a day, three of these feedings being of small grain, the other two of a rich mash food with some meat therein—they are likely to grow very fast and surprise those who own them.

We have seen late broods of this kind grow surprisingly fast, yet we know full well if they are only partially looked after, sparingly fed and not given good surroundings, they are likely to be small and undesirable specimens. The secret of success with late hatched birds is the knowledge of properly caring for them so as to keep them comfortable and to feed them very strongly so as to push them for a quick sturdy growth. These late chicks require the feeding of considerable corn, meat or animal food of all kinds, and they must have plenty of grit, most certainly a supply of fresh water and green food. Above all, see to it that they are not troubled in the least with insect vermin or lice of any kind.

GOLDEN WYANDOTTE MALE

Requirements for Poultry Raising

P. H. Jacobs said in an exchange over fifteen years ago: "Poultry raising requires less space, less capital and more brains than any other work on the farm, and, in proportion to land, labor and capital invested in it, the business will pay better than any other on the farm. It is supposed that anybody can keep chickens. The fact is that it requires more knowledge and experience, and fully as much work to make asuccess of poultry than with any thing else, but compared with the cow, sheep, or hog, the hen can hold a high position and remain at the top all the time."

A Condiment for Chickens

My aim is to give a practical suggestion rather than an exhaustive treatise. Chickens kept in artificial conditions do not thrive without condiments, especially the hens do not lay well. The customary vegetable condiments, Cayenne, ginger, mustard, etc., have, to say the least, proved disappointing. A better condiment than any of those in general use is both desirable and accessible. Such a condiment is *cantharin*, the active principle obtained from an insect misnamed, "Spanish fly," —it is not a fly, but a "bug," or beetle (coleoptera).

Many families of beetles contain these active principles in varying amounts. They are native to a large portion of the earth's surface; mostly abounding in Southern Europe, the Levant, the regions of the Mediterranean, Egypt and China. Some varieties of beetles closely allied to the genus *cantharis*, are native to the United States especially in the Middle, the South, the Pacific Coast, and in the state of Missouri. Indeed there are few localities in the temperate zone and subtropics in which beetles to some extent do not occur containing *cantharin* to a perceptible amount.

The regions of the old world in which these beetles, rich in *cantharin*, are numerous, are the localities noted for chickens now, and have been from the earliest dawn of history. On the breeding-grounds of these beetles originated the continuous-laying or non-sitting varieties of domesticated jungle fowls, and game cocks noted for courage and address.

Cantharides is the blister of regular medical practise—it is also extensively used internally. It was added to the *Materia Medica* by Hippocrates, and from that remote time down to the present day it has remained one of the most highly valued remedies known to medical science. It is given to human patients in repeated, decided doses, and continued for considerable length of time. But it is its use for chickens that engages our attention at this time, and, to most minds, a "beetle regime" suggests itself as more natural and beneficial for chickens, certainly more palatable.

An early use of cantharides appears—not including beetles captured and appropriated by the chickens themselves, which, of course, was the first, the greater, and the continuous use—to have been in conditioning Game cocks for the pit. In this use very remarkable, not to say astonishing, merit has been claimed for the "blister beetles."

One can readily fancy that in the hands of a class of ignorant people gross abuse of a drug of such wonderful power might occur—the line of demarcation between wholesome stimulation and injurious irritation has bounds—precaution is advisable. Through the practical learning of a Scotch physiologist, nitrate of potash was suggested to obviate effects of overdosing with cantharide; and gunpowder as a popular source for nitrate of potash. By its (gunpowder) introduction cantharides has been safely placed within the reach of all classes—the unscientific ascribing unmerited importance to the gunpowder do not neglect to give it.

This combination, then, namely, cantharides and gunpowder, is the ideal natural invigorator for chickens—the essence of the stimulating principle of insect life, the requisite mineral element, already mixed in suitable proportion; it makes chicks grow, fortifies the vitality of chickens of all ages—both sexes—and, above all, makes hens lay at any season of the year. Its effect in making hens lay is marvelous. Then, too, so little of the mixture is needed that, compared with other condiments, it is not alone better—beyond all comparison, better—but cheaper and more convenient to use. When a mash was not fed I have known it to be given with fair results in the drinking water.

I speak of its use from positive knowledge for chickens only; it may be, doubtless is, equally valuable for other domestic fowls: turkeys, perhaps, might be raised with restricted range, and Guinea hens induced to lay through the winter. Who will extend the experiment? — Charles Stewart.

Where small flocks prove to be a great source of profit, the owners are quite apt to branch out and add greatly to their stock—expecting to derive the same degree of profit without adding increased accommodations for the larger flock. Many make this mistake, and in consequence fail to make the business a success on a large scale.

MUFFLED SILVER LONG-FACED TUMBLER COCK

Tumblers

The family of Tumblers, called the feather-legged kinds, the smooth-legged, the rollers and dozens of other kinds are a most attractive family for any one to breed. There is scarcely a color known in pigeons, either solid, broken, spangled or mixed, that can not be found among the tumblers. The Blood-red and the Bearded Tumblers are most attractive and pleasing to every one.

These are not termed as the high-class varieties, yet hundreds of them are shown at the exhibitions, of such meritorious qualities as to attract attention from all who see them. The Tumbler clubs offered many prize emblems and coops for their favorites, and the classes in these at the large shows throughout the country are heavily patronized.

With these as with all other kinds of pigeons, one should study them, learn their character, their nature, their style and manner of breeding, and have them of the very finest quality that can be purchased.

It is said that Tumblers are not fit for table use. This is not a fact. At one time the writer produced as many as two to three hundred Tumblers in a year, the greater part of which were used at the table. The balance—the selection of the whole lot—were always sold at the best prices.

To be successful with pigeons you must study the books and gain experience through visiting exhibitions, and through breeding and selecting those you desire to grow. Many think that the breeding of pigeons is a pastime. It is not. It is a difficult task to produce the show specimens, and it is not accomplished except through continued care in selecting, matign and caring for your birds. Over and above this, one must have them quiet and well-trained for the exhibition hall.

It is a good time to scatter lime in the hen houses and on the runs after a rain. It should be done on the runs after the chicks have all gone to roost. Scatter the lime in the mornings in the houses after they are cleaned out.

University of Minnesota Experiment Farm

We have a communication from Mr. T. A. Hoversted, superintendent of the above farm, at Crookston, Minnesota, in which he furnishes us the following information in answer to questions sent to him.

The Barred Plymouth Rock seems to be the most popular fowl in this section of the country. The percentage of farmers interested in the improvement of their stock is comparatively small, but the interest in poultry raising is growing very rapidly. Ten years ago when the farm at Crookston was established, there was hardly an inquiry about chickens. At the present time they have more inquiries about them than about any other one thing. Nothing has ever been taken up at the institution that has grown so fast in public favor and that has become so popular among the farming community.

The writer feels satisfied that the future interest in poultry in the state of Minnesota will be very important. There is such an increased demand for information and for better stock that it is almost a certainty that in the future there will be as much poultry grown in the state of Minnesota as in Michigan and Wisconsin at the present time.

At the experiment farm the main poultry building is 16 x 140 feet; incubator cellar 16 feet square, built of brick; incubating capacity for 1,500 eggs. They have nine colony houses scattered over different portions of the farm. They issue a bulletin, in which they recommend a special style of poultry house best suited for the northwest. The writer of the letter seems to think that there is less trouble with dampness in the poultry houses in that section of the country than in others. They do not seem to have bad results from an unusual amount of moisture collecting in the houses, but they do find considerable trouble in controlling the ventilation and moisture in the buildings.

Poultry growers and those who have good quality of breeding stock for sale should look after this section of the country as there is certain to be a very large trade there in the future.

BROWN'S BUDGET

Whew, ain't it hot! Nights too. It's good corn growing weather, but the hot nights are severe on cooped chickens and fowls in close houses. There is little excuse for their suffering in these days of cheap wire poultry netting. Why not make some frames to fit in doors, windows and openings of houses and coops, and cover with one inch mesh netting. Think what a real comfort such contrivances would be to replace the close doors and other things.

In close, badly-ventilated coops that are only occasionally cleaned out, imagine the vitiated atmosphere the chicks are obliged to pass the nights in. Is it any wonder they "don't seem to grow?" Daytime they can seek sheltered places where they can enjoy the refreshing shade and pure air. Nights they must be crowded in sweat-box coops. Be more humane, and use more common sense judgment for the comfort of your flocks.

It is a good sign to see so many farmers becoming interested in poultry to a degree that insures the flocks receiving business attention. It will soon mean an every month revenue of clean cash on some farms, a more wholesome addition to the farmer's table, which will, in a degree, replace too much salt meat diet. In short, it means the addition of profit, and better health, and health means in many instances increased happiness. Great is the American hen!

The poultry woods seem to be literally swarming with men who were the "first" to originate certain breeds and some of these breeds still seem to be of a Topsy origin that ought to be "borned again." Don't be bashful, gentlemen, in this theatrical method of free advertising, it is as good as having jewels stolen from you.

Let the young chicks, and for that matter, the fowls too, have a chance to run on the newly mowed fields. They enjoy scampering over the stubble, and find an abundance of insect food. Just cut my hay crop last week (June 16) and the chicks will leave their morning food from the hay field, and they also linger there late in the evenings.

The orchard is indeed an ideal poultry run. Talk about "pictures no artist can paint," I saw some in my Sunday stroll around the place. A pen of White Plymouth Rocks, comfortably distributed under the wide spreading branch of a grand old apple tree, showing every evidence of enjoyment, was a very satisfying picture. Did you ever notice what a beautiful white the reflected green light gives to white fowls when they are thus under a tree? These same Rocks will stay right in the orchard the whole season. Some of the first apples that ripen will be theirs. They may not consider the amount of sunshine, fragrant ozone, cool rains and refreshing dews that have been the factors in perfecting the fruit, but I know they will enjoy in a real chicken way some of the windfallen apples, and why shouldn't they?

I saw quite a novel and unusual sight in my hay field yesterday morning (June 17). Young chickens, robins and meadow larks, mingling within a forty-foot space. The birds here are protected and know on Oak Grove Poultry Farm they are in no danger from guns or being stoned by bad boys. They seem to appreciate it, and their early morning and late evening concerts is a rare treat to a lover of birds.

During hot weather, my plan is to feed late chicks, while they are young, for the first three or four weeks—often, but very little at a time, and to keep the diet varied. They seem to thrive better after this plan. The last feeding in the evening is as late as possible, and consists of all they will eat, with plenty of fresh water. In closing the coops all watering vessels are rinsed out and turned upside down.

Six months ago every possible method that could be employed to get sunshine in the hen house was followed, now we are working equally hard to keep it out. It is, however, even in hot weather best to let the sunshine pour in the houses for half an hour or more just after they are cleaned out. Sunshine is a purifier of dark damp places, and with a good circulation of air through the houses, the best of sanitary methods are being employed. Dry road dust scattered thinly over the floors after the droppings are removed, then followed with a little air slacked lime is a better plan than using either materials singly.

BOYER'S TALK

Notes in Passing

Some years ago the popular combination was poultry and duck culture, but to-day we find less farms taking up these two branches, and the tendency now is to have it poultry and pigeons. The scarcity of game, as well as the stringent game laws, has made game a very hard article to secure in market, and squab pigeons have been taken up as a substitute, and it is a good one. As these two branches can so well be combined without costing much if any extra labor, pigeons are now playing a very important part on the poultry farm. If arrangements can be made in time it is the intention of the writer to conduct a number of experiments in this line for the benefit of the readers of The Feather. The question is so often asked, "Are pigeons as profitable as poultry?" The squab breeders say there is more money in them, which assertion the poultrymen dispute. To test this matter we will have a contest between an equal number of hens and female pigeons. The product of both will be marketed, and a strict account kept of the feed and labor expended. The experiment will probably cover three years, but notes of its progress will be made each month in that time.

Now that the hot months are upon us, there are a number of matters that should be attended to at once:

First, as the hatching season is over, the male birds should be removed from the flocks and placed in separate enclosures alone. For this purpose we have small houses measuring 2x2 feet floor space, two feet high in front and one foot in the rear. In the front is a one-inch wire netting door. Attached to this house we have a run two feet wide, two feet high and twelve feet long. The top is divided into two sections of six feet each, and placed on hinges. The first section near the house is covered with thin lumber to protect the bird from the heat of the sun and rain. The second section is wire. These runs being movable, we keep shifting them about to fresh grass plots. In them we keep a bird in each until late in fall, when they are returned to the flocks. By separating the sexes during warm weather the fowls molt in better condition, and what eggs the hens lay will keep longer, not being fertilized. The frame part of the run is made from shingling lath and covered with one-inch wire netting.

Second, there should be a change in the feed. Cut down the supply of corn or other fattening food, and feed more liberally of green stuff. Also add a greater percentage of linseed meal, which will assist in the molting.

Third, if you are running trap nests, make the visits to them more frequent, as hens are apt to more or less suffer if confined too long in these nests during hot weather. We never run our traps during summer, as we do not care so much to know how many eggs a hen will lay the entire year as we do how many she will lay during the fall, winter and spring. Hens that do good laying during the summer months and only ordinary work during the months when the prices for eggs are the best, and not of much value for raising future stock.

Fourth, have the houses open as much as possible at night. Our houses are constructed on the scratching-shed plan. During the summer we have the curtains hooked back, the door leading from the scratching shed to the roosting pen left wide open, and the window in front of the roosting pen taken out. In place of this window we have a one-inch wire netting frame. This makes a cool house, and the stock do not suffer so much from warm nights as they certainly do in closed houses. Besides these open houses disinfect themselves; that is, the pure air coming in during the day and night purifies it in the best possible manner.

Fifth, the flocks are thinned out so as not to be too crowded on the roost. It is far better to divide up four flocks in six houses, than it is to leave the full pens, only to have the birds sit close on the roost at night and sweat. Where this is not practicable, the next best move is to cull out the poorest and dispose of them.

These are five important matters to look into if we want our birds to enjoy good health, give good results, and build up the future generation. The hardiness of our stock must begin at the fountain head. According to the care given so shall be the results. Comfort goes a great way in reaping a good harvest. The man who makes poultry pay is the one that will slight nothing for the comfort, health and happiness of his stock.

Do not forget the grit supply, even if the fowls have free range. They gather a variety of feed, especially grains, but the chances are that they can not find the proper grit. Keep a box of hard, shap grit before them, but do not be led into the dangerous practise of supplying broken glass for grit on the theory that it is sharp and will cut the contents of the crop. We have known cases where it also cut the crop. No poultryman of experience will risk it with his fowls.

While the fowls have freedom and can gather considerable food on the range, do not make them do all the feeding. If in the range they can secure plenty of tender grass and bugs, it will not be necessary to supply them any other feed excepting an evening meal of grain. This had better be wheat, although a little cracked corn added—say two parts wheat and one part cracked corn—would probably be better. Where a range is only ordinary in richness, it is best to give a light mash feed in the morning, for the crops will be empty and the fowl suffers considerably with hunger.

It is a good thing now to feed an hour earlier and an hour later each day. A good morning hour for feeding is 6 or 6:30; and 5 or 5:30 in the evening. Allow the stock (both old and young) to use their own pleasure in going to roost. It will be noticed that youn growing chickens are always the last to "turn in for the night." Even long after the old fowls are in their houses the young chaps are busy chasing bugs and hunting worms. It is surprising, too, the amount of insects that are caught after sunset. Fowls allowed out doors early in the morning gather considerable worms, but it is not advisable to allow chicks to run among a lot of grass while there are heavy dews.

During this and next month, when the chicks are five to six weeks of age, we remove the mother hens and have them fight out their battles alone. This is not always advisable when they have free range, but in large runs (our runs are 7x125 feet) we find the chicks thriving better. It no doubt has been often noticed that about this time the old hens have begun laying and seem to care less for their young. Some hens, when they commence to grow tired of their family, begin to abuse them, giving them severe pecks when they come near, and often badly injuring the little innocents. When we remove the hens we divide up the young in the different houses, allowing twenty to twenty-five in each flock. The chick house for each flock measures 4x4 feet, which gives them plenty floor space. In these quarters we keep them until they are ready to be disposed of for breeding purposes, of course narrowing down the size of the flock as they grow.

Squabs are raised in one month, bring big prices. Money makers for poultrymen, farmers, women. Send for our Free Book and learn this immensely rich industry. 83

Editorial Gossip

The Egg Reporter states that there went into New York City during May, 1897, nearly 300,000 cases of eggs, while during May, 1904, seven years after, there went into New York 491,000 cases—almost double as many. If the consumption of eggs in New York during the month of May, 1905, increased the same ratio, about 520,000 cases of eggs went into the city the present year in the month of May. A recent census taken for the city of New York shows a population of four million people. According to the calculation of the eggs sent into New York, there would be thirteen and a half million dozen of eggs, a little over three dozen per month for each person in New York City; or, in other words, an egg per day for every man, woman and child in this largely populated center. Taking this for a basis, if the eighty-five million people in the United States would each one of them consume an egg each day, the consumption of eggs in the United States would so over-run the calculation of the Agricultural Department as to surprise every one.

There is no one product that equals the egg for food. Four eggs are at all times equal in food value to one-half pound of meat. The egg is the most easily prepared product we have for the housewife to serve for breakfast. This is largely the cause of the increase of the consumption of eggs in large cities, and, in fact, throughout the world. Meat has become almost a delicacy, while eggs can always be secured and used as a readily prepared product for breakfast; and the egg sandwich is a most comforting morsel for the workman to carry in his lunch basket when he goes to work. These advantages work largely in favor of egg production, and so long as eggs come within the reasonable reach of every one in comparison to the expense of meat, the consumption of them will steadily advance, and, without question, in the next seven years the city of New York will alone consume near a million of eggs per month.

Supplying this large demand for eggs has induced people all over the world to consider the advisability of establishing large poultry plants for the sole purpose of producing eggs for market purposes. In some instances, this has proven a disadvantage, from the fact that some have been induced to rush rashly into a proposition they do not understand; and no one should ever attempt to invest largely in any business proposition they are not familiar with. On the other hand, thousands of people all over the country who have studied the question and made it a business rather than a venture have succeeded, and made even more than a good living out of their fowls.

In a communication from Professor James E. Rice, of Cornell University, he states that "all the boys, entered in the poultry classes of the winter, have finished their courses in poultry husbandry, all of whom have positions in this line of business who desired such a place; and we have demands for more than we can possibly supply." This shows the drift of market poultry culture as a business, when so large a number of young men can have employment as soon as they graduate from the schools of poultry husbandry, and go out with ready employment and the opportunity to use that which they have learned at the school. This shows a healthy condition of the poultry business that should be encouraging to everyone.

There is one branch of the poultry industry that has not had sufficient consideration, and that is, housing of large flocks of poultry in convenient manner, in houses that are dry and comfortable during the winter months, withont being too expensive. We believe that the state government, if not the National Government, should take up this matter and offer rewards to those who would solve the problem of building a poultry house suitable to all conditions and all climates of this vast country during the winter months.

The two very important features in this would be a perfectly dry interior that would be sufficiently warm without artificial heat to keep the poultry comfortable all winter, and never have any gathering of frost or dampness on the windows or walls of the house. We know that the canvas curtain will keep the interior perfectly dry. This, however, comes rather from the extreme cold forcing the dampness out of the atmosphere than from creating a dry condition within and a more comfortable temperature. The cause of the dampness within the house is the result of the air of the interior being warmer than that of the exterior. When the sun goes down at night, and the cold biting frost sets in, the influence of the extreme cold against the outer walls congeals the warmer air on the inside of the windows and the boards; then, when the atmosphere within again becomes warmer—the result of the sun beating down upon the roof and the window glass—this frost melts on the walls and windows and runs to the floor to go through the same operation the following night.

That which is needed is a house so constructed, with double, or triple, walls that will be nonconductors of heat or cold; these would keep the cold out and the warmth within. And, if so constructed that the influence of cold can not change the warm interior, this might settle the problem; but, so far, we must all admit that there has not been a plan presented for a poultry house that would overcome all these defects, that could be built and poultry kept at a profit. Many such houses have been made, but at such an expense that of necessity none but the rich could have them; and, when the cost of same is calculated, it would be very difficult indeed to make a profit from keeping hens in such expensive houses.

Too much stress can not be given to culling your poultry. This should be done continually. When, from any cause it is not profitable to keep one of your fowls, dispose of it as market poultry. Select the poorest and most unprofitable specimens and get rid of them. This manner of culling, in its result, is like "the survival of the fittest." If such a method is constantly carried out, you will grade your poultry to such a high standard of perfection that each one left in your flock in a year or two will be superior to the best of all a few years prior to that time. This weeding out and disposing of the poorest and keeping only the best is a system very progressive in its results; for every time you take out the poorest one to-day, you return to-morrow to find another inferior to the balance. And, in this way, your selection finally leads to almost perfection in your entire flock.

In keeping your poultry either for breeding stock or for egg production, it is always best to have them separated, keeping not more than twenty-five or thirty hens in each flock. We know that many present the argument that two hundred in a flock will do almost as well as would the same two hundred in eight flocks with simply a division fence between them and a division in the connected house to separate them. The careful consideration of this subject and questioning those best informed brought replies which advocated from twenty to fifty hens in a flock. The majority, however, stated that their experience taught them that twenty-five in one flock did better than thirty, and that twenty in the same space would do better than twenty-five. There seems to be a well-founded reason for selecting the number of twenty-five or thirty to make up the most profitable flocks for laying purposes.

There is another question worthy of contemplation in separating flocks for egg production, and that is the selection of all of one kind and color for a pen, and to have only pullets where pullets are kept in a pen; that is, if you have a pen of pullets and these are all white, they will do better than if there was a division of black, buff and white in the pen. The black hens are more apt to fight white ones than they will those of their own color; hens and pullets are more apt to quarrel when kept together than will hens alone or pullets alone in one pen. For these reasons it is always best to have the hens to themselves and the pullets to themselves. And another remarkably good reason for this is, that the pullets will grab up the food more quickly than can the hens; the hens, being slower in motion, are oft-times deprived of their share of the food by the more active and energetic pullets.

The selection of the breed or variety does not seem to be of near as much importance as the question of how will you keep them? The best hens in the world for egg production are the hens that are best managed or handled. The best lot of laying pullets in the world will not give profitable results if badly housed, cared for and fed, while, on the other hand, an inferior quality of laying hens maybe brought to the point of doing better than more prolific layers. The kind of hens to have for profit are the hens that are well managed. In the Australian Egg Test that closed the first of April, we have the most perfect living specimens of the results of carefully handling a hundred pens of hens; and no one breed or variety has the entire advantage over any of the others, proving two things conclusively—first, that there are many good egg-producing hens in every known breed or variety; second, that some hens of all breeds and varieties will produce more eggs than will other hens of the same breed or variety. To have good laying hens, they must be bred in line for years to establish the laying propensity; then the best of these must be selected for their ability to do good work, and they must then be handled to the very best advantage to gain best results.

Hens will not keep themselves, nor will hens that are expected to keep themselves help to keep their owners.

Begin to think now that you will not have any eggs next winter, unless you provide plenty of litter for the hens and make them dig in it for every morsel of grain they have to eat.

The Press Association

A meeting of editors and others connected with poultry publications and agricultural papers that have poultry departments has been called to meet at Indianapolis, June 19, to complete the organization of a press association. During that week, the 17th and 18th, will be held a meeting of incubator manufacturers at the same place. Some interested in the press association are also interested in the incubator business. For this reason a meeting has been called for Wednesday morning, July 19, when it is hoped that an organization will be formed that will prove of lasting benefit to all publications that are paying special attention to the poultry business throughout the country.

President Howard has expressed the hope that this meeting will be largely attended and in addition to the written invitations sent out he wishes to extend an invitation to all who come within the above designation to meet with the association at Indianapolis, and help to make this organization what it should be.

The Dunkirk-Fredonia Fanciers' Association will again have charge of the poultry show to be held in connection with the county fair at Dunkirk, N. Y., September 5 to 8.

The Pacific Fancier is a new and handsome paper published at Los Angeles, California. The June number contains several articles on White Leghorns and good ones at that. It also contains the White Leghorn Standard. The latter is copyrighted by the American Poultry Association, and is found only in the American Standard of Perfection. It can not be published in any publication without infringing on the copyright. An explanation is in order.

In looking over The Pacific Fancier we find that the fanciers and members of the Los Angeles Poultry Association are a divided house and two shows are likely to be held unless the hatchet is buried by the warring factions. It is hard enough to pull off one successful show in one place without even trying to experiment with another one in the same locality in the same season. Get together boys, give and take and forget all petty and selfish matters, and unite to hold one rousing good exhibition.

The American Standard of Perfection goes to press this week and barring unforeseen obstacles will be ready for delivery early in August. This will give the knockers a mouth to get their hammers out.

Superintendent Walter S. Gladney, Jr., is busy on the seashore at Atlantic City, N. J., getting everything ready for the big fall show at Trenton, N. J., the last week in September. "It will be the best ever," writes blue-eyed Walter, and that means volumes. Trenton is a strictly fanciers' show, managed on the same lines as the best of winter shows. The special poultry and pigeon premium list will be ready early in August.

We are indebted to Dr. A. W. Bell, superintendent of the Canadian National Exposition, Toronto, Canada, for a very handsome poster advertising this world-famous event. This is one of the first and most important early shows on the American continent. The poultry and pigeon departments are conducted in the most up-to-date manner, and lead where others follow.

Mr. Frank B. White, of White's Class Advertising, Chicago, Ill., stopped over between trains to get a whiff of the Adirondack ozone prevailing in the cities of Johnstown and Gloversville, New York, one day last week. Mr. White was on an eastern trip in the interest of his advertising business, but had time enough to discuss American Poultry Association matters with the writer of these notes. Evidently, to judge by Mr. White's remarks, there is a good time ripe for a change in the management of the affairs in the old society and possibly Cincinnati will be the exact spot where the purifying process will be started. It is the home of Ivory Soap and George Ewald, and these two alone should help the good work along. And Mr. White will be there also.

The Empire Cooping Company, Feltonville, N. Y., are deluged with orders from the West. Thousands of New Empire coops will grace the poultry buildings of a number of state and county fairs next fall, where in the past exhibitors furnished their own. The change from a motley array of coops to a uniform and permanent arrangement of strictly modern cages is a big step forward. The effete East has been getting in line for the past few years and discarded the itinerant coops of the exhibitors and placed permanent caging and staging in the poultry buildings, or rented the approved modern coops of Spratt's, the Empire or Nutmeg concerns. It is now in order for some of the county fair managers to appoint a superintendent of poultry that can distinguish the difference between a Toulouse goose and Guinea fowl.

Mr. Arthur O. Schilling, the young poultry artist, whose good work has pleased the readers of the American Fancier for several years past, is now engaged in doing special work for White's Class Advertising Monthly. His cattle illustrations in the May number of the latter give fine evidence of Mr. Schilling's ability as a delineator of live-stock subjects. He will make an eastern trip shortly and visit the leading poultrymen and study fowl nature in all its phases. Mr. Schilling has a bright future ahead, and being a sensible boy of fine instincts and an enthusiastic lover of art, his success it naturally assured. There is something else that will help Schilling, viz: He has bred and knows how to breed good chickens, especially Cochin Bantams.

Mr. Wickey, of Chicago, Ill., did not vote on the location of the annual meeting of the American Poultry Association. But the gentleman from Illinois is a candidate for secretary which, in a measure, may explain his reluctance to cast a ballot.

This reminds us also of another gentleman who seems to have an aversion to casting a vote, viz: Mr. Sharp Butterfield, of Windsor, Canada. In 1904, he failed to place his beautiful "John Hancock" to the return postal voting card, in 1905 he is also guilty of committing the same non-committal policy. What is the matter with the once strenuous and combative "Bismarck" of the fancy?

At American Poultry Association meetings in the past, poultry judges, who were also members of the executive committee of the society, and whose votes and influence were necessary to help decide the location of such functions, made engagements to adjudicate the merits of the feathered bipeds on the strength of such influence. This was the case at several meetings held within the past five years, and no doubt at others as well in the dim past. In this age of frenzied finance and frapped morals there may be nothing wrong in a judge looking out for himself in such matters, as long as there is no deliberate cash consideration demanded for the vote. The offer is usually in the nature of an invitation to act as one of the judges, carrying with it the delicate hint that the vote and influence of the judge and member would be appreciated at the average annual meetings such action may not prove harmless to the interests of the old society, but where important business is to be transacted, a loyal member of the Americal Poultry Association, whether a judge or not, forgets all about personal gain and sectionalism and votes for the place best calculated to advance the real interests of the American Poultry Association. Has this been done in the year nineteen hundred five.

The weather has been fairly cool and but few real hot days have been encountered in the rosy month of June. Chickens have grown apace where conditions were natural and the feeding and handling intelligent. This indicates a large and fine chicken crop next fall and winter. July promises to be hot, not in atmosphere only, but in the poultry press. There will be a very warm time ahead to judge by the rumors floating about. Ex-president D. Lincoln Orr is on the war path and is after Sachem Curtis's scalp and "Big Chief" Hewes's also. "Bill Nye" Shureman is sharpening his steel pencil while "Deacon" Frank Heck is preparing another cartoon. Editor John Haverhill Robinson is emulating Brer Rabbit and "layin' low." And all this pother over the long suffering A. P. A! But when the lie is passed between the pen warriors, all hope of a peaceable and comfortable summer vanishes.

President George M. Holden took charge of the American Poultry Association July 1. May his term of office be less turbulent and far more pleasant than that of his predecessor, Mr. D. Lincoln Orr.

A correspondent requests us to state the size and weight of Silkies. The latter should not exceed three pounds in weight.

Double matings must be used in breeding show Rouen ducks. Mating the darkest drake to the darkest female will produce the best dark-breasted and breeched

Gallery of Fame

G. D. HOLDEN

IT IS gratifying to be able to present to our readers the above sketch of Mr. G. D. Holden, of Owatonna, Minn., who was elected president of the American Poultry Association of Minneapolis last January, and took up his tenure of office on the first of July. Mr. Holden has been an enthusiastic fancier all his life, and one of the most successful in handling Partridge Cochins. Wielding the pen capably in the interest of the Poultry Herald, of St. Paul, a brilliant writer and a keen thinker, he should fill the office of president of the association with credit to himself. Our artist has most certainly brought out the brilliant points in the illustration, and we trust that the gavel which shows so much strength may be wielded by the new president for the interest of every poultry fancier in the United States.

exhibition drakes. To produce fine females, mate a very dark drake to a very sharply marked lighter duck. Color plays an important part in Rouens, and unless these separate matings are carefully made and maintained from selected breeders of good exhibition strains the fine points will be lost, albeit the size is left. There is nothing handsomer in domesticated water fowl than a well-grown Rouen drake or duck.

Breeders of Silver Spangled Hamburgs are not always a "happy family" when it comes to discussing the merits of show specimens. There is such a divergence of type that the old time breeders of this variety can not see, with any degree of satisfaction, the newer type winning over their pets. This is more noticeable in the females than in the males. That this same question is of considerable importance and creates as much discussion in England as in the United States and Canada, is readily observed by reading the discussion in the English poultry press. Mr. S. C. Robertshaw in the current issue of Pigeons and Poultry, has a very readable article on Hamburgs, and in speaking of the spangled varieties writes:

"Now for the spangled Hamburghs. The cocks here again are all right. I don't know how we could make an improvement. They are certainly darker in the neck and saddle hackles than formerly, but the present type of a real good 'un is a picture. The late Mr. Pickles used to say it was the height of his ambition to breed a perfect silver spangled cock. Well, I never yet saw one which could not have been improved in some little detail. It is very difficult to get a good dark saddle, good sized bars and steppings, the hackles well ticked, and yet have the breast spangling well broken. The pure white ground color, too, is a thorn which pricks very deeply. In fact, you could put together the very cream of any season's produce, and an artist with his brush could touch the very best of them up; so that there is still any amount of scope for ambition in producing a perfect article. I am sorry to say the spangled hens are not in anything like such an enviable position as the cocks. Here again the cock sort and pullet sort are two quite distinct families. The cock breeders used to be known as the old Yorkshire silver pheasants. The pullet sort as the Lancashire moonies. The latter, to my mind, are rambling clear away from the Hamburgh family. I said the pencilled pullets were getting every year less in size, whereas the spangled have gone to extremes in the opposite direction. They are nearly as big as Dorkings. If we put an exhibition silver spangled pullet or hen and an exhibition silver pencilled pullet side by side in pens, and ask anybody who is not a Hamburgh fancier, or who was not bred and brought up within ten miles of Silsden, and I dare guarantee he would not say there were both Hamburghs. No, the two sorts have suffered from breeding for two extremes. I am not going to complain of the markings of real good spangled pullets, but their heads are just about as rough as besoms. They are not a bit like a Hamburgh's head, but very similar to a Redcap's The head is a very great objection, but that is not the worst fault. They are very poor fertilizers. In fact, many of the best mooney cocks never fill a single egg, and I venture to say not one in every hundred will fill 50 per cent. Is there any wonder that spangles are not popular? I have long advocated the mixing of the two sorts, i. e., the cock breeders and the mooney. The former are first-rate fertilizers, and are smart in head points. I am certain the exhibition cock would smarten the mooney pullet. Why cannot we try it? We certainly can't make them worse than they are now. In my humble opinion, we can make them very much better."

There is so much truth in the above that we would ask Silver Spangled Hamburg fanciers and breeders in this country to carefully study it over and send in their views regarding the rather strange discrepancy in the types of the silver-spangled females and those of the other varieties. The breeding for the intense large spangle by the use of the mooney male may produce the desired result as far as the latter is concerned, but at the expense of the shape, carriage and often reproductive functions of the progeny. While it is true that hen-feathered Hamburg males are really disqualified by the Standard, we still meet a number at the county and even larger fairs, and usually they receive prizes where competition is light. In young birds there are times when it is impossible to detect the sex in the golden-penciled and even silver-spangled varieties. At a number of shows not many years ago a hen-feathered golden-penciled cockerel was hown as a pullet and won the blue under different judges. The advocates of single matings have very good opportunities here condemning the double mating system, perhaps. But Hamburgs are naturally a fancier's fowl, and to produce the best in either sex requires rather radical measures, if fine penciling and spangling is desired. But the type should not be lost sight of. Compare a finely-bred golden-penciled female with a choice modern Silver Spangled Hamburg pullet or hen, and there is no similarity of type whatever. If shape makes breed, the females of the silver-spangled variety are tremendous exceptions to the rule.

It is perhaps this difficulty in maintaining the type added to the difficulties in breeding finely-penciled and spangled birds that has caused a drop in the popularity of some of these varieties of Hamburgs. The fact that the Black Hamburgs are the most popular can be partially attributed to the above difficulties in breeding the other varieties, although the blacks are a good-sized bird, lay good-sized eggs and plenty of them. They are easy to keep, very profitable, and handsome in the show-pen when well bred and groomed. But all Hamburgs are beautiful and with proper environments are the easiest and most satisfactory of the truly ornamental fowls we have under domestication.

Odds and Ends

The Excelsior Wire and Poultry Supply Co., on June 23, unfortunately lost by fire their factory where the Banner Roofing was manufactured. They have asked us to announce that they can fill small orders with what they have on hand, but that it will be at least three or four weeks before they will be in a position to make deliveries.

Transfer of Stock

To whom it may concern:

Owing to my engagement in other business that will demand my entire time and attention, I have sold my Orchard Hill Poultry Farm, stock, name, and good will, to Mr. D. E. Hale, present manager of the farm, and will remove same to Windom, Minn. I hereby heartily recommend Mr. Hale, his stock, and methods of doing business, to my old as well as new customers. Mr. Hale will breed Barred, Buff and White Rocks, S. C. W. Leghorns, White Wyandottes, Pekin Ducks, and White Holland Turkeys, and customers can feel assured of the same liberal treatment at his hands that they have enjoyed in the past. Thanking all old customers for past patronage, and hoping you will give Mr. Hale your confidence in his new home, I am,

Very truly yours,
James H. Childs.

SPECIAL SALE

To make room for our young stock we will sell 200 choice breeders at a very reasonable price, consisting of males and females from our very best matings last season. These birds were used in our breeding yards this season, and we are about to break up these matings. We need room, so can't carry over *all* the good ones. To any one looking for good breeding stock, this offers an opportunity to get good birds at about *one-half* their value. Write us while it lasts.

PARTRIDGE WYANDOTTES

ARE WITHOUT DOUBT
THE COMING BREED

Many of our leading fanciers have started in to breed them this season, which is one of the proofs of the above assertion.

For **beauty** and **utility** they have no superiors, and when reliable stock is obtained they breed true to **color** and markings, and are the breed that a new beginner should start with as well as the experienced fancier. They are also the **poor man's friend**, as they will fill the egg basket, if properly fed, when eggs bring the highest prices.

Eggs are very fertile at this season of the year, and many **prize winners** are hatched during the months of June and July; so send in your egg orders at once. They will cost you $5 per 15; $8 per 30; $10 per 45.

In order to make room for **growing chicks** I will sell 200 **exhibition and breeding birds** at **half price**, a part of which will be delivered immediately and the balance after July 1. Remember, my birds won the **lion's share** of the most coveted prizes at the **largest shows** last season, and that both my prices and quality are right.

I. B. HADAWAY
609 North Main St.
Brockton, Mass.
tf

AN EGG FACTORY

must be furnished the proper raw materials to keep going to its full capacity. **HARVEY'S Electric Poultry Food** will keep your hens busy in winter when eggs are high—lots more money in winter eggs; you ought to feed for it. Write for our free catalogue — **tells how.**
Harvey Seed Co., 92 Ellicott St., Buffalo, N.Y.

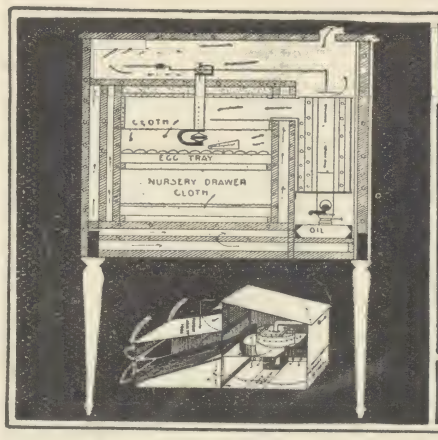
"EGGS, BROILERS AND MONEY"

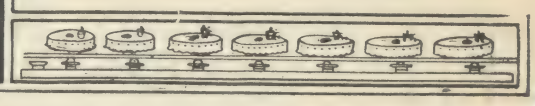


Is the title of a book that tells the breed of fowl with which you can make money. It is a general talk about eggs and broilers based upon an experience. Free for the asking.

LAKEWOOD FARM COMPANY (Inc.)
Burrsville, New Jersey

Breeders of Lakewood Farm Layers, The Great Profit Payers.

A Paper Incubator.



150 Egg Capacity.
Weight, 80 Pounds.

HENS SECRET DISCOVERED

This Incubator is a Wonder and the Leader of All Incubators.
Does not require an expert to get a successful hatch.

Made of Paper—the World's best-known Non-Conductor.
As strong and durable as wood.

TESTED. SUCCESSFUL. PRACTICAL. GUARANTEED.

Will heat up in any outside shed in zero weather in one hour, and will use from 50 to 75 per cent less oil than any other incubator on the market.

No even temperature necessary; any temperature between 95° and 106°, like the hen's, will secure a 90 to 100 per cent hatch of fertile eggs.

Our Regulator is ions of air and an even heat not necerrary.

Our Brooders—on the market for the past seven years—have demonstrated to the most exacting that they can raise in them 95 to 100 per cent of chicks.

Ohio Broiler Farm.

Valley Junction, Ohio, May 19, '04.

Young's Strain S. C. W. Leghorns

I Have No Other Breeds

My strain, again for the 5th consecutive year, shows its superiority by winning more prizes at Madison Square Garden, New York, than all others combined, including cup, medal and four specials. Two weeks later I showed at Boston against the most prominent breeders of the East, winning nine prizes on nine entries over birds that won 1st at St. Louis.

I showed 2 Cocks, won 1st, 2d; I showed 2 Hens, won 1st, 2d
I showed 2 Ckrls., won 1st, 2d; I showed 2 P'l'ts, won 1st, 2d
I showed 1 Breeding Pen, won 1st

Also four specials. This record has never been equaled by any other breed or breeder in America. Stock for sale at all times. Eggs $3.00 per 15; $15.00 per 100. Address 44

BUFF WYANDOTTES

At Boston, Mass., Jan. 17-21, 1905, was held the Buff Wyandotte Club meeting which brought out all the largest and best eastern breeders and the largest and best exhibit ever made. **The Herald Square Winners** were there, the **Madison Square Winners** were there, and **Our Winners** were there and won their usual **Three Out of Five First Prizes,** making **Five Years in Succession** that we have won three out of five First prizes at Boston. This year we also won both second prizes where we lost the first prizes, as follows: **Cocks, 2, 3, 4, 5; Hens, 1, 2, 6; Cockerels, 2, 6; Pullets, 1, 6; Pen 1.**

Please note our record since 1897, given below, and remember this is the ancestry that keeps our strain of this variety at the front, it dont cost any more than the other kind.

NOTES FROM ENGLAND

By John Wharton

During May I spent a pleasant week-end at Bolton Abbey, Yorkshire, the autumn residence of the Duke of Devonshire. I was the guest of the duke's gardened, Mr. Thos. Roose, who is a keen fancier and who for the past three or four years has been breeding bantams, the Pyle and Birchen being his favorites, with a sprinkling of Black Reds thrown in. For incubation Mr. Roose has used the invincible Silkie and its crosses, and while engaged in his crossing experiments he has struck a black Silkie of fairly good appearance. The females are really typical, but the cocks fail in color. especially in neck hackle. However, if he makes as much headway during the next two years he will add one more breed to the poultry world. This season Mr. Roose has taken up the Silver-penciled Wyandotte, and I shall not be surprised to hear of the sale of the whole of his stock of bantams and their place being filled with Wyandottes.

We had some interesting rambles together through the Bolton woods, which are yearly visited by thousands of holiday makers from the busy towns of Yorkshire and Lancashire, and in fact, from all over the world. I dare say some who read these notes will have rambled through the woods and looked at "The Strid," where foolish people leap and some lose their lives or get off with a good ducking for their foolishness. The woods were at their best. Every tree wore a virgin green, the bird life was a real treat, and as we tramped through the woods, now looking into a bird's nest, then stopping to admire the exquisite song of some bird, then gazing at the beautiful scenery of hill and dale, we came to the conclusion that no truer words were ever penned than "God made the country whilst man made the town."

My friend is a man who revels in everything that applies to country life. To see his large collection of eggs gathered in his own locality and by his own hands was a treat, and many were the interesting tales he told as to how he had come into the possession of some of them. His collection of flints dating back to the Roman period were equally interesting, and many of them had been found either by himself in the gardens or grounds of the Abbey or picked up by his men. His collection of fossils had attained such a large form that they occupied a large room to themselves. He here told me an incident showing the ingratitude of men. It appears he has allowed any one interested to look them over with the result that one of the finest specimens he ever possessed has been stolen. Such a rascal, if caught, in my opinion, ought to be heavily punished. It is such mean tricks as these which shut up many a pleasant place and seal and harden many a loving heart. In plant life Mr. Roose seemed to know the name of every one we met and many curious things he pointed out to me regarding them. On several occasions he has supplied the Royal Botanical Gardens with rare specimens.

How fanciers do talk when they get together, and Mr. Roose and I were no exception. Each evening we sat talking birds, flowers, eggs, and the history of the Abbey until almost "daylight did appear." It is said that "one touch of nature makes all the world akin," and if there is a real joy to a fancier it is to meet another fancier and talk over their hobbies. Whatever fanciers are when at the shows there is one thing certain that not a better class of people exist on earth.

BUFF PLYMOUTH ROCK MALE

It has been said once a fancier always a fancier, and no doubt there is a lot of truth in it. I remember once asking a fancier who had sold out how he felt, and his answer was: "Well! just like a smoker without tobacco"—some of us can understand that. Only a short four months ago it was reported that Mr. Charles Preston of Wyandotte fame was retiring from the fancy, and, in fact, he went so far as to sell off a lot of his well-known birds and dismiss his poultryman. Now we are delighted to know that Mr Preston can't leave the fancy, try as he may, and he is busy buying here a good one and there another. By the way, Mr. Preston is one of Yorkshire's largest manufacturers and employs a large number of hands, and to the honor of the Wyandotte fancy he is Hon. Secretary of the United Wyandotte Club—a club with the largest membership in Britain. We can not afford to lose such men from the ranks of the fancy; it is such as Mr. Preston who have enhanced the value of prize poultry and the working man fancier knows his value as a buyer.

The Bath and West England show was held from May 30 to June 3, but it can not be termed a success as the entries were by no means good, but the quality was very good. It is surprising how some of those old agricultural show committees cling to out-of-date methods. For instance, at this show two judges took the classes jointly. I well remember once judging in this way. It was at a small show in Yorkshire among the hills. It was a show which possessed a committee who to this day think they are conferring a honor on any one they may ask to officiate in any part of the show as judge. I have yet to learn that judging is anything short of hard work. Well, at this particular show the first invited a gentleman to judge; he certainly knew a pigeon from a fowl, but little more. He offered to judge if they could get me to help him. Help him, yes, it was help him and no mistake. He would do nothing except mark the awards as I made them. But when the grumblers came around he put all the blame for imagined wrong awards on to me. In vain had I tried to get him to do some classes alone, but no, he would only mark awards given by me. There were two classes for pigeons. It was indeed amusing to hear him call an Owl a fine Homer and Dragoons Carriers, and so on. My conclusion was that never more would I judge jointly with any one.

It is not, however, shows that are held in remote parts that are most out of date in methods, but some of our largest. The Royal itself has rules which would compel my birds to be in the pens at the show for seven days, and that in the hottest time of the whole summer. The schedule itself is far from perfect, while the date for closing entries some eight weeks before the show makes it impossible to ever have a good entry. Perhaps the worst point of all is the withholding of judges' names. You don't know whether the man who is to judge knows his business or not, and rather than enter you put the schedule in the fire.

Some capital Dorkings were shown at the Bath and West show by Lord Deerhurst, while many other well-known fanciers were represented. Writing about agricultural shows brings up to my mind the fact that the great Yorkshire show has no poultry section, and as far as I know never had. This is strange when we know that Yorkshire for the production of prize poultry and genuine fanciers is second to none in all the counties of Britain.

The International show which is to be held the same date as the Crystal Palace has decided to embrace pigeons as well as poultry. It is thought that many who are afraid of meeting the big fanciers or who do not care to pay two dollars entry fee at the Crystal Palace will avail themselves of a few entries at the International, and thus make the show a success. A guarantee fund to start the ball of five hundred dollars has been subscribed and we now wait to see if the pigeon world will support the International as the poultry exhibitors have done. When I mention the fact that the sales through the secretary's office last show amounted to a little more than five thousand three hundred and fifty dollars, you can guess that it is a show of importance.

A large quantity of poultry is now being exported to South Africa—a good sign that the people are settling down after the war. A short time ago I got a wire from a dealer asking me for two cockerels, for which he offerd to pay me one and one-half dollars each. They were for South Africa. Now what quality can any one expect at such a low figure? My advice has always been when you import get the best you can, don't pay heavy freight on moderate birds. I had a visit from a South African fancier just a year ago, and he told me how he had placed an order with a well-known English advertiser who is nothing more than a dealer, and when they arrived he killed them. In this case he had paid good money for which he should have

PARTRIDGE COCHIN FEMALE

received some good birds. I have before me as I write a letter from a fancier in Ohio, U. S. A., who complains that he has remitted cash to a well-known English fancier for a pair of rather rare bantams, but the same have not been sent him, although it is several months since the dollars were sent and the receipt of cash acknowledged. I am investigating the matter, but I should say the party has not the bantams, and he thinks he is too far away to proceed against him.

Some people must think by the way they do business that the world is much larger than it really is, or they would never treat their fellow fanciers in the way they do. How soon we can meet nowadays should make us be careful from a business point of view. Only in January of the present year I had an order from Dunedin, New Zealand. Little did I think I should ever see this distant customer, yet next week he is coming from London where he has just arrived, to visit my farm for a few more birds.

I had an amusing letter from Germany lately from a would-be fancier. The sum total of it was that he wanted me to give him a start. He told me that he was but a postmaster, and contrasted himself whom he styled "a poor devil" with us rich English fanciers and Yorkshire manufacturers. He assured me that the receipt of the birds would gladden his heart and he skilfully pointed out that mentioning the export in the fancy papers would fully repay me as an advertisement. He appears to have been full of faith that his plea would work as he enclosed the addressed label, and on it was marked in red ink "Carriage Paid." He is waiting for those birds yet, I can assure you. I was not the only one whom he wrote to, for a short time after I was staying with my friend, Dr. Jackson, of Carnforth, when he received a similar application. I have from time to time had some funny letters, but I thought that this for being well thought out fairly took first prize.

More money can be made from keeping a few hens than a number of poor ones, unless they are all kept for market eggs. When market egg production is your purpose, keep enough good laying hens to fill the demand. When exhibition poultry is your line, keep as few as possible and only the best.

Notes From New York

The beautiful dome of the Harlem Opera House was set apart for the home of a few pigeons several years ago when the house was built. These have become the pets of the women and children in that neighborhood. Today the flock has become so large that the management of the opera house has ordered their complete extermination. The women and children are up in arms at this and declare that if the pigeons are driven away they will withdraw their patronage from the house in the future. It is a beautiful sight on summer evenings to see these pigeons cluster on the fire escapes in the rear of the flats in the up-town neighborhood to feed from the hands of the women and children.

At Luna Park, Coney Island, there has been installed one of the most attractive displays that it has ever been our pleasure to examine. Mr. Thomas, the electrician of Luna Park, has opened a place of amusement in which there is a complete display of incubators and brooders under the management of Mr. Nones, of Ozone Park. The incubators are arranged and filled so as to produce chicks every day in the week, and the brooders on the outside are filled with these young chicks, which attract large crowds to their neighborhood.

In addition to this there has been arranged a stereoscope with electric lights into which you gaze upon the eggs in the process of incubation. Here can be most readily examined the advancement of incubation from the first to the twenty-first day. Even the pulsations of the heart and lungs of the growing chick may be observed in the shell through this medium.

The poultry fanciers, incubator manufacturers and all interested in the artificial growing of chicks might well be thankful to the management of Coney Island for introducing this feature into their wonderful display, and we wish to extend to Messrs. Thompson and Dundy, the owners of Luna Park, the congratulations of this paper and the poultry fraternity as well, for having grasped the situation and conditions of the poultry interest just when the whole world was ready to be taught the lesson opened to all who might be willing to engage in poultry culture.

BROWN'S BUDGET

Are you taking extra good care of some of those early chicks—the prospective winners at Hagerstown next fall? It's hot work now in the chicken yards, but it's the season when neglect proves costly. Have a regular system and it seems to lighten labor, and if you think how a few little things attended to in time will add to the comfort of your flock, it will be a labor of love instead of a dreaded task.

"Recently a man was heard to remark: 'I can now afford to be honest, I've made money enough.'" "What did he mean by that expression?" asked Bill Tomsin of Billups. "Don't know, but I'll be dod gasted he warn't any poultry man. Ain't any of 'em I know that can afford to treat a feller right. Bought two settin's of light Bramer eggs, got five Bramers, two yellow Cochins, two black chickens, and seven brindle-streaked things — don't know what they are. Wrote a kicking letter to the feller and what'd'y' s'pose he wrote back?" "S'pose he said he'd duplicate the settin' for half price, eh?" "Nope; said I didn't now when I had a bargain, that I only bought Bramers and had secured half a dozen breeds and I orter send him more money. That feller hain't made nuff yet to afford to be honest."

Too many people seem to consider the members of the beautiful Bantam family as merely fancy birds. There are thousands of genuine fanciers—those who never consider prices when they desire to possess pets of any kind—who preferably select specimens of the miniature breeds of poultry when they indulge in their hobbies.

A man to be a successful poultryman must have a stock of good judgment to draw from. Such men think before they do things, not afterward. Their mistakes are to them object lessons and are not laid to the door of so-called "poor luck." Yet there are people who have been failures in all other occupations they ever tried that are willing to start in the poultry business on a large scale, where they should be proud to reach after some years of effort. Such a start is the beginning of a finish perfectly discernible to thinkers.

Have any readers of the Budget had experience with cow peas as poultry food, either as dry food or pasture? It has been claimed by some authorities they are "excellent for poultry." We would like to hear from any one who has tried cow peas for poultry.

Don't forget that a little charred wheat or corn is very desirable about once in every two weeks during the summer.

Beats all how smart some people are. Some will be in the poultry business a whole year and can give more advice than others who have been a score of years battling with the ups and downs of hendom. It takes some people years to find out they haven't learned their lessons, and don't know quite as much as they imagine or pretend they do. Indeed, "a little knowledge is a dangerous thing."

"What are the best trees for quick growth in a poultry yard for shade?" a writer asks the Budget. Either mulberry or wild goose plums. Would not advise any trees that would not produce a profitable crop of some kind. Some cherry trees also make remarkably quick growth whose upright habit can be changed to a more spreading one, by keeping the tall shoots properly trimmed back.

The term "fancy" fowls is gradually growing obsolete as it should. Pure-bred fowls is the proper way to express it. A man may fancy one of the pure breds, but that doesn't make the fowls fancy. Of course, all pure-bred animals have fanciers, and they are liked as much for their worth and utility as their beauty. So it is with the pure breeds of poultry.

The poultry industry of the South in the last few years has made great advancement. Last winter the writer on a trip south noticed scores of crated eggs at stations to be shipped north. The National Provisioner says the shipments of poultry products to New York from Kentucky, Tennessee, Georgia, the Carolinas and Texas, are extensive. It claims Texas poultry is better than Texas beef, and that the dressed poultry is also of a fine grade.

A liking for an occupation creates enthusiasm, and enthusiasm is a stimulant to effort, but it must lock arms with business tact to insure the greatest success. Some men make money in raising poultry and others make failures. It is the difference in methods, and luck has nothing to do with it whatever.

O. E. Roessle, at one time a successful poultryman but now a successful hotel keeper in New York, is the author of the following: "The secret of the failures of well-equipped poultry plants, where capital is plentiful, lies in the fact that the owners think to make a profit by hiring some man (of course a poultryman preferred) to run the establishment and make it succeed for them. This is not an impossible thing to do, but one of the first requisites is the poultryman, or in other words, the ability. First-class poultrymen out of employment are as scarce as hens with teeth. Again, a first-class poultryman hired by a man who knows nothing about raising poultry soon becomes a second-class man at everything. There may be exceptions to this rule, but they are scarce." He might also have added these proprietors expect to hire experts at the wages of an ordinary farm hand, and don't seem to recognize intelligence.

"But to you, young man on the farm," writes I. K. Felch in an exchange, "if you have $500 or more, you settle down on the old homestead and commence the work of chicken culture, and work up the business, growing with it, and its limits will be the measure of your energy and business tact. Beef rules high: colossal fortunes are made in its production. Chicken meat costs no more to produce, and poultry rules in price with the best cuts of beef, therefore the margins in it are far greater."

The best time to do things is just as soon as it is necessary. It can be done better then. Tomorrow will be too late; if tomorrow ever comes.

Each month brings its special work in poultry raising. The work of the present month is supplementary to the coming one. Success hinges on getting the flock in readiness for the seasons to come.

BOYER'S TALK

Trap Nest Trials and Farm Experiences

There was a very close race between March and April's egg records, the former beating the latter by only three eggs. The March total was 1,456 and April produced 1,453.

The daily record, per pen, was as follows for the month of April:

April	Pen 4	Pen 5	Pen 6	Pen 7	Pen 8	Pen 9	Pen 10	Pen 11	Total
1	8	5	7	10	9	5	7	4	55
2	7	7	7	7	9	12	4	3	56
3	7	8	5	9	12	3	5	7	56
4	7	5	9	5	5	11	8	3	53
5	7	7	5	9	8	6	3	5	50
6	7	7	6	12	8	5	7	4	56
7	10	5	4	5	4	5	7	4	44
8	6	5	5	10	6	9	5	4	50
9	8	8	5	6	5	5	6	4	47
10	10	8	6	8	6	6	7	4	55
11	7	8	6	8	3	6	4	4	46
12	8	7	5	9	7	8	5	3	52
13	7	5	10	6	4	6	8	4	50
14	9	8	3	7	6	6	5	3	47
15	6	4	6	10	7	7	6	2	48
16	8	8	4	6	4	6	9	*	45
17	8	7	2	7	8	6	8		46
18	8	5	6	9	8	6	9		51
19	9	7	3	7	6	6	7		45
20	9	7	8	8	6	7	7		52
21	7	7	5	7	7	9	5		47
22	7	5	5	7	6	6	10		46
23	10	10	2	7	7	10	6		52
24	9	5	4	9	7	6	11		51
25	6	7	2	4	2	2	8		31
26	8	8	5	8	8	7	9		53
27	8	6	3	9	7	5	7		45
28	6	4	7	5	3	4	10		39
29	9	6	2	5	4	8	10		44
30	7	8	8	7	2	2	7		41
Totals	233	197	155	226	184	190	210	58	1453

*Part of Pen No. 11 was sold during the month, and the remainder placed with Pen No 10.

The above table shows that the highest number of eggs gathered in one day was 56, and the lowest 31. The figures in March were 63 and 33, respectively. Pen No. 4 leads in number of eggs laid, giving 233, while Pen No. 6, which led last month, drops to seventh place, with a record of 155.

The following table shows the number of hens laying in each pen, the number not laying, and the average amount laid.

Pen.	Number hens laying.	Number hens not laying.	Average pen record.
No. 4	15	0	15.8
No. 5	12	3	16.4
No. 6*	14	1	11.1
No. 7*	15	0	15.
No. 8*	15	0	12.3
No. 9*	14	1	13.12
No. 10*	10	0	16.7
No. 11*	10	0	10.
Totals	105	5	

*During the month of April we sold some of our birds, as follows: No. 41, April 15, from Pen No. 6; Nos. 49, 50 and 53, April 17, Pen No. 7; Nos. 46 and 59, April 24, Pen No. 7; No. 57, April 29, Pen No. 7; Nos. 67 and 68, Pen No. 8, April 17; No. 65, Pen No. 8, April 24; No. 77, Pen. No. 9, April 17; No. 84, Pen No. 9, April 29; No. 125, Pen No. 10, April 15; Nos. 97, 91, 92, 96, Pen No. 11, April 15. These hens did not quite come up to the standard we set, so we disposed of them to make more room for the deserving ones in the pens.

This gives Pen No. 10, Light Brahma hens, the highest pen record for the month, and Pen No. 11, Light Brahma pullets, the lowest. The highest number of eggs gathered in one day from a single pen was 12, which number was reached by Pen No. 8, April 3, and Pen No. 9, April 2.

During the month we found thirty-five eggs outside the trap nests in Pen No. 4; four in Pen No. 5; three in Pen No. 6; ten in Pen No. 7; four in Pen No. 8; six in Pen No. 9; ten in Pen No. 10; three in Pen No. 11. The record further shows a loss of two layers since last month, the hens becoming broody.

For the month White Wyandotte pullet, No. 54, laid twenty-three eggs, which added to her previous record, gives her a total of forty-four since the first day of January. But Light Brahma hen, No. 85, has the largest total record to date, having laid seventy-seven eggs since the first of the year, although she laid only eighteen during April.

Other good records are as follows: White Wyandotte, No. 55, 21 eggs; White Wyandottes, Nos. 3, 25, 27, 52, 78, 90, 20 eggs each, and Light Brahma hens, Nos. 4 and 78, 20 eggs each.

It looks very much as if White Wyandotte hen No. 30 is sterile. She has not laid an egg this year, although she has a good healthy look. In the same pen, hens Nos. 21 and 24 did not lay this month. Since the first of the year we received but nine egss from No. 21, and five eggs from No. 24. No. 42 hen, in Pen No. 6, is busy incubating, so has no time to lay. No. 80 in Pen No. 9 is nursing a lot of young.

NOTES

The question has often been asked, how soon can a broody hen be made to again go to laying. This year we made the following notes, that may be of value in solving this problem. January 1 White Wyandotte hen, No. 16, became broody. We penned her in a cage, and she returned to laying again January 14, and laid eleven eggs the remainder of the month. She kept up steady laying until February 18, in which time she laid eleven more eggs. But for the rest of the month she laid only one egg, and during the whole of the month of March laid only three eggs, and only four eggs in April. This made a total of thirty eggs she gave us to the month of May, when she again went broody.

February 15 hen No. 59 became broody, and we gave her eggs. She hatched and took care of a brood until April 20, when she began laying again, and to the first of May had given us nine eggs, laying every day but two. In appearance between No. 16 and 39 there is a great difference. The latter has a bright, healthy look, while the former looks sluggish. We believe that nature made a wise provision for rest in broodiness, and when a hen is allowed to take that rest we believe that it fits them for better work.

This experience shows that it will take about nine weeks for a hen to hatch and grow the chicks out of the danger line before she will again start to be productive. In other words that two weeks good nursing will be sufficient to enable the chicks to hustle for themselves. It will be noticed that after chicks are two weeks old, the mother hen gradually becomes more distant to them.

Further experiments along this line also showed that while we can break up a hen from her broodiness in one week, by penning in a new house or cage, it will require about two weeks for her to get ready to lay again. With one week more she would hatch out a brood, and we could well afford to do without her eggs for six weeks in addition for the labor she saves us in nursing the chicks in their babyhood.

Taking all our hens' records, we find that individual hens rarely lay more than ten days in succession; and that in the majority of cases five to seven days was the limit. The general average of steady laying we found to be two days in succession, then skip a day; then two days again, and skip a day, and so on during the month. This is excellent laying. We also class the hen a very fine layer that will give us an egg every other day during the season. Some years ago, while the writer was one of the editors of Farm-Poultry, he sent out a number of letters to prominent poultrymen, inquiring how many days in succession a hen could lay.

Previously a letter had been received from a clergyman who said that, according to his count, he had a hen that laid fifty-six eggs in as many consecutive days. But a neighbor told him that he certainly was mistaken in the count—that a hen never lays over six or seven consecutive days. He asked for the opinion of others, and that prompted the inquiry sent out, to which the following are a synopsis of the replies received:

H. S. Babcock said he knew a Bolton Grey hen to lay one hundred and thirty-five eggs in one hundred and thirty-five days.

I. K. Felch said one hundred and fifty-nine eggs in as many days, was claimed for a pet White Leghorn hen in 1859. "But," added Mr. Felch, "I saw and edited the account of Epraim Whitman's record of two hundred and four eggs each, in twelve months, fifty-one hens in the flock, all White Leghorns—the best record I ever knew. I had a Golden Spangled Hamburg give me one hundred and fifty-one eggs in one hundred and eighty-one days, in 1865.

F. B. Zimmer said he once owned a Brown Leghorn hen that laid twelve consecutive days.

George C. Buchnam said he had a Light Brahma hen lay forty eggs in forty-three successive days. Also a Dark Brahma hen lay two hundred and sixty-two eggs in three hundred and sixty-five days.

H. B. May said he knew a White Leghorn hen that laid forty-six days in succession, and a Barred Plymouth Rock that laid forty-three days in regular order.

James Rankin said he once owned a hen which laid two hundred eggs in succession. She was a Creeper.

Ezra Cornell said he never knew a hen to lay over four days in succession.

C. E. Howell said he had a hen that laid twelve eggs in twelve successive days; and twenty-six eggs in thirty days.

L. H. Myers said he had a Barred Plymouth Rock pullet that laid every day four weeks, with the exception of a single day.

A. C. Hawkins said he had a barred Plymouth Rock hen that laid thirty-six days in succession.

Knapp Bros. said they knew of a Single-comb White Leghorn hen that laid an egg for thirteen consecutive days.

F. J. Marshall said he had a Barred Plymouth Rock Pullet that laid twenty days in succession.

George H. Northup said he had three Minorca hens in a pen that laid eighty-three eggs in thirty days, and four hens that laid seventy-five eggs in twenty days.

J. H. Drevenstedt said he once owned a Light Brahma pullet that laid fifteen eggs before she quit, stopped two days and laid five eggs a week after that for a month. Also had a Silver Wyandotte that laid an egg every day for two weeks, stopped a day, and laid an egg every day for the following week.

According to the letters received, the largest number of days a hen can lay in succession must be credited to a Creeper, owned by Mr. Rankin—it having laid two hundred eggs in two hundred consecutive days. Mr. Felch and Mr. Babcock came next highest, with one hundred and fifty-nine and one hundred and thirty-five, respectively, credited to a White Leghorn in the first case, and a Bolton Grey in the next.

A Queer Attachment

The New York Herald is our authority for the following:

"A dispatch from Berlin asserts without qualification that a brood of chickens has been hatched by a cat in Buschen, near Dusseldorf. The cat attacked the old hen each time it ventured to approach, and continued sitting on the eggs until the chicks were hatched in the ordinary course. The chicks now follow the cat about wherever it goes."

In commenting on this the editor of the Herald states that while he has seen some very peculiar attachments of this kind, and that he has seen many fine chicks entirely wrapped up in a cat, yet he would favor the ending of such attachments with the shot gun—a safe conclusion.

Editorial Gossip

Producing eggs for market has become a business that can be made very profitable, or, perchance, result in the loss of a great deal of money. Consider for a moment what is involved in keeping a thousand hens. The average cost of feeding a hen for a year—one dollar—would make the outlay or expenditure for food one thousand dollars per year. If these hens each produced one hundred and twenty-five eggs and these eggs sold for a cent and a half a piece, there would be eighty-seven cents made on each hen. If these hens could be so handled as to produce one hundred and fifty eggs each per year, there would be one dollar and twenty-four cents made on each hen. If these same hens could be induced to lay one hundred and sixty eggs per year, you would have a profit of almost one dollar and a half from each hen. Therein is the secret of success in keeping hens for producing eggs for market. We read so much of the flocks that produce two hundred eggs each. We know for a fact that there have been many hens that have produced two hundred eggs each and over; but there have been few instances where large flocks of thousands have been kept that have exceeded very much the average of one hundred and thirty eggs each.

It is within the possibilities to have large flocks of hens that will produce on an average of one hundred and fifty to one hundred and sixty eggs each, and we know of some breeders who can handle large flocks and do better than this; but when speaking of the probabilities of the market egg business, we must give the average and not the exception to the rule. Any one that can gain over one hundred and twenty-five eggs from each hen per year, if good managers, can make more than a living from a thousand hens; but you must be up and doing and caring for them, as they should be cared for, if you expect to make a profit. Neglected hens never do well either summer or winter, and those who hope to make money from hens should make up their mind before they embark in the business that they must be industrious, careful and alert, and ever willing to do all the necessary work.

A dry floor to a poultry house, and a dry interior throughout is of so much importance that we are willing to state that it is one of, if not the most important feature for success in the poultry business. With damp floor and damp interior to a poultry house, you can scarcely expect to make a profit. In fact, we do not believe that any one could handle poultry successfully with such surroundings. At the same time, the same flock of hens kept within a house that had perfectly dry floors and a dry interior would be profitable.

Locking the house after the chickens are stolen is a good deal like cleaning up after the house is thoroughly infested with lice, and the chickens are half of them dead or sick from the loss of blood and the influence of the blood-sucking vermin that has infested them.

Never too late to mend, but there is not much use in trying to build up the usefulness of a broken-down, worn-out old hen. Fatten her nicely and send her to market.

It is quite as profitable to raise Brahma cockerels for soft roasters and for capon dressing in the winter as to raise the capons themselves. The one drawback is that you can not keep so many of them together.

Advertising is a commodity that should be purchased the same as food for our table and clothing to wear. When in need of advertising, look about and select the best, and pay the price asked for the same. Cheap advertising is like anything else that is purchased for less than a good article of its kind is worth. No one can afford to buy advertising that is sold at a price that would not pay for the paper on which the advertisement is printed, if the circulation claimed were true. The way to advertise is to select a space in the paper and continue to keep it alive and pertinent to the season of the year. Always have something in the demand that will attract purchasers at the time they read it. Do not advertise eggs for hatching in September and showbirds in April. Advertising should change with the seasons the same as the spring bonnet.

We do not hear so much as formerly about the broiler business, yet there are more broilers than ever, they are better than ever before and prices keep good.

The banks of the ocean are usually destroyed during storms that cause unusually high tides. The money that has been lost in the broiler chicken and duck business was most of it lost when the sea of excitement along these lines was running very high. Since it has been reduced to a plain, every-day business, plenty of money is made out of it.

We can remember when train loads of people used to go to Hammonton, N. J., to learn to grow broiler chickens. Everything was excitement down that way. People thought that all the broilers in the world were produced at Hammonton, but now things have quieted down; you scarcely ever hear of the broiler business in that locality, yet success is found there the same as elsewhere.

If you are a farmer and keeping poultry on your farm, it will always pay you to raise your own grains to feed your poultry; but if you are a poultry farmer, paying special attention to the production of eggs and poultry for market, you had a great deal better buy your foods for your stock in the cheapest market you can purchase and not waste your time in producing grain that might be used to better advantage in the raising of more chickens.

Every one who has a farm should grow there some alfalfa or clover hay. These two are the best winter hay for cows and calves, and sheep as well. There is nothing better for the poultry than plenty of alfalfa hay or good clover hay. If you keep cows, sheep or poultry, have some of one or both of these kinds of hay for your stock in winter, even if you must buy it.

A man that feeds his cows in winter on timothy hay and corn shucks, and feeds his poultry on nothing but corn, will have poor, non-producing cows in the spring, and over-fat, non-producing hens. It takes about the same food ration to produce milk as it does to produce eggs. The food demand for both of these must be rich in protein.

We see many statements that all poultry and turkeys as well should have a good tonic in the spring. Never give medicine of any kind to poultry that is perfectly well. Live stock that needs a tonic of this kind had much better be sent to the butcher. We hear it stated that young turkeys should be fed plenty of pepper. Now, in the name of the all-wise poultry grower, why should young turkeys be burnt up inside with pepper, when the hot sun and the lice are doing all they can to make their lives miserable? Better by far see that the young turkeys are not infested with lice. Provide shade and plenty of good food for them, and they will prosper.

"A little farm well kept" is an old saying. If this little farm is turned into a poultry farm, and then well-kept, it must prove profitable. If the one in charge is smart enough to add fruit and bees to the poultry part of the farm, and a few squabs as well, the owner should grow rich.

Again the controversy is up as to the growing of cow peas and beans for poultry. Poultry do not naturally like peas and beans. We have known them to be quite hungry before they would touch them, when fed in the natural state. But in the growing of peas and beans, if all the small, broken peas and beans are kept and thoroughly cooked as they would be cooked if to be fed to the hogs, and some bran and a little ground oats mixed with them, they make a good chicken food which the hens like, and which adds largely to the egg production.

When you come to thresh the bean and the pea crop, save all the hulls and straw, and especially the fine dust that accumulates under and about the thresher. Use all this for a flooring and dust bath, and scratching material for your hens next winter; they like it and will pick lots of seeds that are good for them from among the litter.

Now, what do you think of this? A Western paper tells us that the largest egg farm in the world is owned and managed up in New Hampshire; that there are nearly nine thousand hens kept in six hundred small houses. The hens are never allowed outside of the little eight-foot square coop, and never fed green food. And this paper seems to believe that such a place does exist, and that a man can confine twelve hens in an eight-foot square coop and keep them there all the year around, and make a dollar a year off of each hen. We have heard of this farm before, and think that if we will go there, we will find that the poultry has considerable land to run over.

One of our exchanges asks the question: "What kind of chicks may be expected from cold storage eggs?" We imagine, if they hatch, that they will be a cold proposition.

The same paper states that poultry is not recognized "property," and that "if your neighbor kills your chickens that are trespassing on his land, that he would not be held responsible for same." Along the same lines, what about a cow or horse that might jump the fence into your neighbor's pasture? Or, would he be permitted to kill your child for stealing his fruit?

A SPECIAL
Combination

In order to more thoroughly complete our plans of organization, we have decided to make this Special Combination Offer to all lovers of Poultry and Pigeons of

The Feather and
The American Fancier

ONLY ONE DOLLAR for BOTH PAPERS for a WHOLE YEAR

We are positive there never was a better opportunity for securing the Cream of Poultry and Pigeon Literature than is to be found in this combination. You get a paper every week edited and illustrated by the best talent in the country. It is a rare chance, and you can not afford to miss this combination. Send a DOLLAR BILL without delay and have your name on our list. Address,

The HOWARD Pub. Co.
714 Twelfth Street N. W.
WASHINGTON, D. C.

The Atlanta Poultry Association will hold its annual show December 15 to 21, at Atlanta, Ga. Mr. H. F. Reils, one of the editors of The Southern Fancier, has been elected assistant secretary.

This reminds us that the good old Southern Fancier, under editors Downs and Reils, has improved greatly with age. It is one of the cleanest, brightest and most readable poultry monthlies that comes to our desk

There is a very large demand for early show birds from the men that make the rounds of the big and little fall fairs. The rarer and more ornamental varieties are the scarcest and consequently the most sought after.

John C. Blunck, the Game and Game Bantam breeder of Johnstown, N. Y., reports an unusual demand for early exhibition games from the West. A very large increase in the interest of big Games is manifest in that section, the St. Louis World's Fair exhibition being largely responsible for this revival.

A new society was organized at Mohnsville, Pa., recently, under the name of Wyomissing Poultry Association. The first annual show will be held December 19 to 23, 1905. Mr. Geo. W. Hatt, of Mohns Store, Pa., has been elected Secretary.

The famous Danbury Fair is Connecticut's greatest fall agricultural exhibition. This year the dates are October 1 to 7. Mr. Fred Borman is again secretary of the poultry department, and that means an up-to-date classification, systematic cooping and perfect management. Further particulars regarding this fine fall show will appear in later issues of The American Fancier.

Chenango County, New York, will hold its annual fair the same week as the New York State Fair, viz, September 12 to 15, at Greene, N. Y. The poultry department is one of the leading features of this well-conducted agricultural fair.

Dr. A. W. Bell, superintendent of the poultry and kennel departments of the Canadian National Exhibition to be held at Toronto, Canada, August 26 to September 11, sends us the following:

"By this time many of your readers will have received a copy of our premium list, and, looking it over casually, they might come to the conclusion that in the popular varieties there was not much inducement for them to make an exhibit at Toronto, but, on referring to our entry book for the past few years, we find that the first prize money in many of these classes, and in fact we might say in all of them, has been $3, and this year, on account of the change in the wording of Clause 14, 'where there are over twenty entries, the first prize will be $4,' which you must admit is very liberal, considering the small entry fee of twenty-five cents. This clause gives for eight to eleven entries, $2, $1, seventy-five cents and fifty cents, and where there are twelve up to twenty, prizes are $3, $2, $1, seventy-five cents and fifty cents, and where there are over twenty entries, prizes are $4, $3, $2, $1, seventy-five cents and fifty cents. This includes, as I said before, the majority of the utility birds, and we would feel very grateful for any entries that any of our American friends might feel disposed to favor us with."

We called attention in previous issues of The American Fancier to the fact that exhibitors residing in the United States should send entries to Toronto. It is an opportunity they should not miss. The American and Mediterranean classes should be well represented by American-bred birds, the more the better. Our Canadian friends will appreciate it. The fanciers and exhibitors in the Dominion are only too glad to have plenty of competition and more than glad to have exhibitors from the United States visit the great fair at Toronto. There is nothing like it on this side of the herring pond, while the hospitality of our Canadian friends is famous. Readers of The American Fancier, who intend exhibiting at Toronto and who have not received a premium list, can obtain one by sending names and addrsses to Dr. A. W. Bell, 536 Ontario Street, Toronto, Canada.

Mr. Andrew Riddell, superintendent of poultry at the big fair to be held at Cambridge, N. Y., September 5 to 8, informs us that the following judges have been selected to place the awards: A. F. Peirce, John D. Jacquins and N. V. Whitbeck. A nice list of specials has been secured by Mr. Riddell and the indications are that Cambridge will be larger and greater than ever as far as the poultry exhibits are concerned.

It is whispered that the American Red ghost will reappear at the annual meeting of the American Poultry Association to be held at Cincinnati next January. This will enable some trim and slick gentlemen to take the convenient position on the fence again "waiting for the clouds to roll by." Incidentally, more clubs will be furnished to the knockers and hammerheads to start up another anvil chorus.

The clashing of dates of a number of prominent fall and winter shows has caused considerable shifting about in the selection of judges. Quite a number of the old-timers will be seen in new places and a corresponding number of the younger judges will make their first appearance at some of the old established exhibitions. With the increase in the number of poultry shows comes a decided demand for more judges. The supply of qualified adjudicators in feather alley is not equal to the demand.

The poorest sandy soil is the best for fowls. It is true that it will not provide grass, although some kinds of green food will grow on it. On sandy land diseases such as gapes, cholera, etc., seldom appear. The rich soil abounds in humus, and is the land which harbors all kinds of disease germs. All lands should be dry, and all dampness in summer, as well as in winter, should be avoided. It is well to keep not over one hundred hens on an acre, and if land is cheap and one has plenty of it it is still better to allow fifty to an acre.—Mirror and Farmer.

The above is a perennial that appears year after year in the agricultural press. It's a tough old plant that has outlived many other theoretical growths in the poultry press. It has the merit of being at least plausible and at the same time conducive to real estate speculations where sandy and almost worthless farms are offered to be sold as suitable for poultry raising. The real facts of the case are that outside of the mechanical properties of a sandy soil, which are summed up in dryness and quick surface drainage after a heavy shower, such soils are not by any means the best to grow chickens on. The admission that only fifty to one hundred hens per acre should be allowed is enough to convict the land of its unsuitableness, unless there is land to spare and to be had at a very low price. Even then the extra cost of feeding grain, animal and vegetable food is too great in comparison with the soil that will pasture five hundred to one thousand chickens to the acre The best land for chickens is a rich soil heavy in grasses and clovers, abounding in grubs and insects with cooling and grateful shade from luxuriant foliage, trees and shrubs. Such soils are not necessarily wet and germ infected. Cows produce milk; hens, eggs. It takes suitable feed to produce the quality and quantity. Barren sandy soils certainly can not furnish a small part of this food, so why persist in claiming virtues for such that do not exist? Cheapness in land, like in anything else, is not a virtue at all. It's a mistake.

The current issue of The Feathered World, England, has a rather striking illustration of a Faverolle cock on its title page. It is the first and champion cup male at the Crystal Palace, 1904, the property of Mr. Walter Hawker. The latter in an article in the same issue gives some interesting facts rgarding Faverolles. He has bred the latter for over eleven years and discarded every other breed from them. He finds birds with fairly long backs, deep from back to breast and broad across the shoulders, to be the best. Their good points are summed up as follows: Good constitution, early maturity, superlative table qualities, the flesh being short, tender, juicy and white. The breed stands forced feeding well, and will put on flesh as well as fat,

Gallery of Fame

CHARLES McCLAVE

OUR artist has caught Judge McClave at his best. Those most familiar with the ways of the gentleman will recall the words of wisdom often spoken by him in the councils of state and local poultry organizations and in the meetings of the American Poultry Association. But few of his type are left among those who have devoted all their time to the interest of poultry. While but a young man Judge McClave is a sage in poultry affairs. With such as he will rest much of the responsibility of the next meeting of the American Poultry Association at Cincinnati.

when being crammed. They are good layers, some pullets averaging over one hundred and fifty eggs in twelve months each, but Mr. Hawker thinks one hundred and thrity eggs per capita a year a good average for the breed. Faverolles are, as a whole, small feeders, good foragers, with a great adaptability to fatten at any time. He writes: "I have started them at six weeks old, and ended at ten months, after which age they became stringy, like other breeds. I have kept a careful record of over five hundred Faverolles and their crosses, and always found they gained more weight for food consumed than any other breed and cross. They will stand any climate."

Considerable trouble has been created at some shows in Scotland over the proper classification of Indian Games. At one show they were classed among the Games; at another in the "any other variety" classes. This inconsistency created confusion as well as ill-feeling, owing to some birds being thrown out as being wrongly penned. In England the matter was adjusted by the Indian Game declaring that Indian Games were not Games. The Poultry Club, which is the national society of England, and publishes the Standard, decided that Malays and Indian Games are not correctly Games, and therefore should be entered in the any-other-variety non-game classes, when exclusive classification was not provided. In this country Indian Games and Malays are classified as Oriental Games, and in the new Standard the word Game will be dropped, and the breed known as Cornish Indians. As a rule there has been no trouble at our shows, the classification showing Indian Games as separate entries, although in some instances they were thrown in under Game classes and had to compete with all the varieties

This leads us to remark that one of the worst blunders in a classification is the placing of a half dozen or more varieties in the "any other variety" class. We have seen this at the New York show as well as at a few other large exhibitions. Where rare or new varieties are to be entered, it is better to provide separate classes and omit the prize money than to have Sultans, Oriennettes, Rose-combed White Minorcas and Anconas all to compete together for a cash prize. Judging birds under such rules is a farce pure and simple. It is simply a grab-bag game of finding several birds that win the cash. The judge is not to blame under the circumstances; he simply pits what he deems the best specimen of one variety against the best specimens of the other varieties and must to a certain extent be guided by his preference or choice of the varieties in competition.

Either the man or his work must be master. When the man lays down his manhood, the work will soon run over him.

The Lewis and Clark Poultry Show

The coming poultry show to be given and held in connection with the Lewis and Clark Centennial and Oriental Fair, at Portland, October 5 to 12, inclusive, offers opportunities to the breeders, fanciers and exhibitors of the Pacific Coast, West and Middle West, such as the Pan-American at Buffalo, and the World's Fair at St. Louis presented to the fanciers, breeders and exhibitors of the Atlantic Coast, East and Middle West.

While fall fairs never have been and never will be very popular with the poultry fanciers as a show season, yet when it comes to expositions of national importance, they excite the poultrymen to their highest enthusiasm.

And it is at these great expositions where exhibitors hope to win the coveted prizes, not simply for the small amount of cash that might be obtained by winning, but it is a chance of a life-time, an opportunity only present once in a century, and prizes won at centennial expositions are rated far above any others, as will be seen in looking over the breeders' advertising where they lay special stress upon prizes won at Chicago World's Fair, the Pan-American, and of more recent date the World's Columbian Exposition at St. Louis. Now while no one would contend for one moment that the Lewis and Clark Fair would excel, or we might say equal the foregoing named expositions, yet it comes in their class and will have special features in American history, that places it on an equal basis with other great expositions in a historical line, and for grand natural scenery certainly has had no superior, if an equal, by any that have preceded it.

As to its livestock department, and especially in the poultry class, it makes a strong appeal to breeders of all sections east of the Rocky Mountains, moreso than any other section could do, for the reason that from the time of hoisting the American flags upon this coast to the present day, it has been a valuable field for the produce of the eastern breeders, and while they may consider it too far from home for them to exhibit their stock, they must remember, that it has never been too far from home for the breeders of this coast to send for stock to the extreme east, and also meet them in competition at their great expositions.

They need not be afraid that their honors will be so easily won that they will be practically valueless, but on the other hand, taking into consideration the distance and the class of stock they would meet, in my honest opinion they would be trasured above all others.

There can be no mistake in exhibiting at the Lewis and Clark Fair.

We extend a welcome to breeders and fanciers and earnestly request that you and each of you make an entry and join with us in making a memorable event of the poultry display.—Elmer Dixon, Supt. Poultry Department.

ODDS & ENDS

We have a communication from Mr. J. E. Hirsh, Westmoreland, N. H., in which he states that he has a carrier pigeon marked J. M. 14225 on silver leg band; also black brass band, no mark, on other leg. This pigeon was found July 5. He will be glad to return it to owner on proving property.

We are informed by the stockholders of the Fanciers Poultry Association, of New Jersey, that dividend checks of five per cent have been received on all stock issued. Mr. A. L. Sparks, of Swainton, N. J., should feel highly gratified at the outcome of his pet association. To Brother Sparks more than any one man is due the crowning success of the venture. We pictured Mr. Sparks a short time ago at his best in the pages of The Fancier. We trust that both he and his association will have untold success.

We learn unofficially that there is to be a new poultry paper in the town of Waterville, the future of which is to be guided by Prof. F. H. Stoneburn, a young man of ability and culture in these affairs. Stoneburn, we congratulate you and wish you success.

We have a letter from Mr. M. F. Delano, stating that he will remove to his old home at Suffield, Connecticut, where he will install himself in the poultry business and gather about him the finest that can be had. Mr. Delano has always made a success of the growing of exhibition poultry and we believe that when he is to himself and unhampered he will succeed better than ever before.

The office of the Industrious Hen has been removed from Madisonville, Tenn., to Knoxville, Tenn., where Brother Sledd, the bright light of this periodical, will wield his pen in the interest of better poultry throughout the South.

We have just received in this office a photograph of the Rose-comb Brown Leghorn male bird that won first prize at the great Rochester show. Mr. H. S. Lamson, who owns this bird, can surely be proud of him for he is a remarkable specimen of his kind as shown by the photograph.

Dates Claimed

September 12 to 15, 1905.—Greene, N. Y. George W. Linderson, secretary.

October 1 to 7, 1905.—Danbury, Conn. F. Borman, secretary.

November 27 to December 2, 1905.—Erie, Pa. Northwestern Pennsylvania Poultry, Pigeon and Pet Stock Association. W. C. Pierce, judge; F. E. Thompson, secretary.

December 12 to 16, 1905.—Missouri State Poultry Association. H. P. Mason, Fayette, Mo., secretary.

December 15 to 21, 1905.—Atlanta, Ga. H. F. Reils, secretary.

December 19 to 23, 1905.—Mohnsville, Pa. Geo. W. Hatt, secretary.

December 29 to January 1, 1906.—Wallingford, Conn. New Haven County Poultry Association. D. A. Nichols, N. W. Card, judges; Wm. J. Hogan, secretary.

January 2 to 5, 1906.—Lynn, Mass. J. Fred Watson, W. B. Atherton, D. P. Shove, C. S. Flanders, judges; Chas E. Hunt, secretary.

January 29 to February 3, 1906.—Cleveland, Ohio. The Cleveland Fanciers Club Co. F. L. Gruehl, secretary.

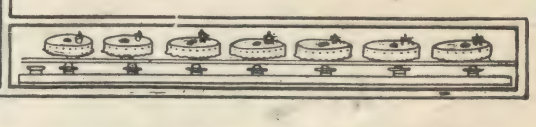
Breeders of Lakewood Farm Layers, The Great Profi Payers.

A Paper Incubator.



150 Egg Capacity.
Weight, 80 Pounds

HENS SECRET DISCOVERED

This Incubator is a Wonder and the Leader of All Incubators.
Does not require an expert to get a successful hatch.

Made of Paper—the World's best-known Non-Conductor.
As strong and durable as wood.

TESTED. SUCCESSFUL. PRACTICAL. GUARANTEED.

Will heat up in any outside shed in zero weather in one hour, and will use from 50 to 75 per cent less oil than any other incubator on the market.

No even temperature necessary; any temperature between 95° and 106°, like the hen's, will secure a 90 to 100 per cent hatch of fertile eggs.

Our Regulator is ions of air and an even heat not necerrary.

Our Brooders—on the market for the past seven years—have demonstrated to the most exacting that they can raise in them 95 to 100 per cent of chicks.

A BEGINNER.

Long Island City, N. Y., June 15, '04.
Perpetual Hen Co.

BUFF WYANDOTTES

At Boston, Mass., Jan. 17-21, 1905, was held the Buff Wyandotte Club meeting which brought out all the largest and best eastern breeders and the largest and best exhibit ever made. **The Herald Square Winners** were there, the **Madison Square Winners** were there, and **Our Winners** were there and won their usual **Three Out of Five First Prizes,** making **Five Years in Succession** that we have won three out of five First prizes at Boston. This year we also won both second prizes where we lost the first prizes, as follows: **Cocks, 2, 3, 4, 5; Hens, 1, 2, 6; Cockerels, 2, 6; Pullets, 1, 6; Pen 1.**

Please note our record since 1897, given below, and remember this is the ancestry that keeps our strain of this variety at the front, it dont cost any more than the other kind.

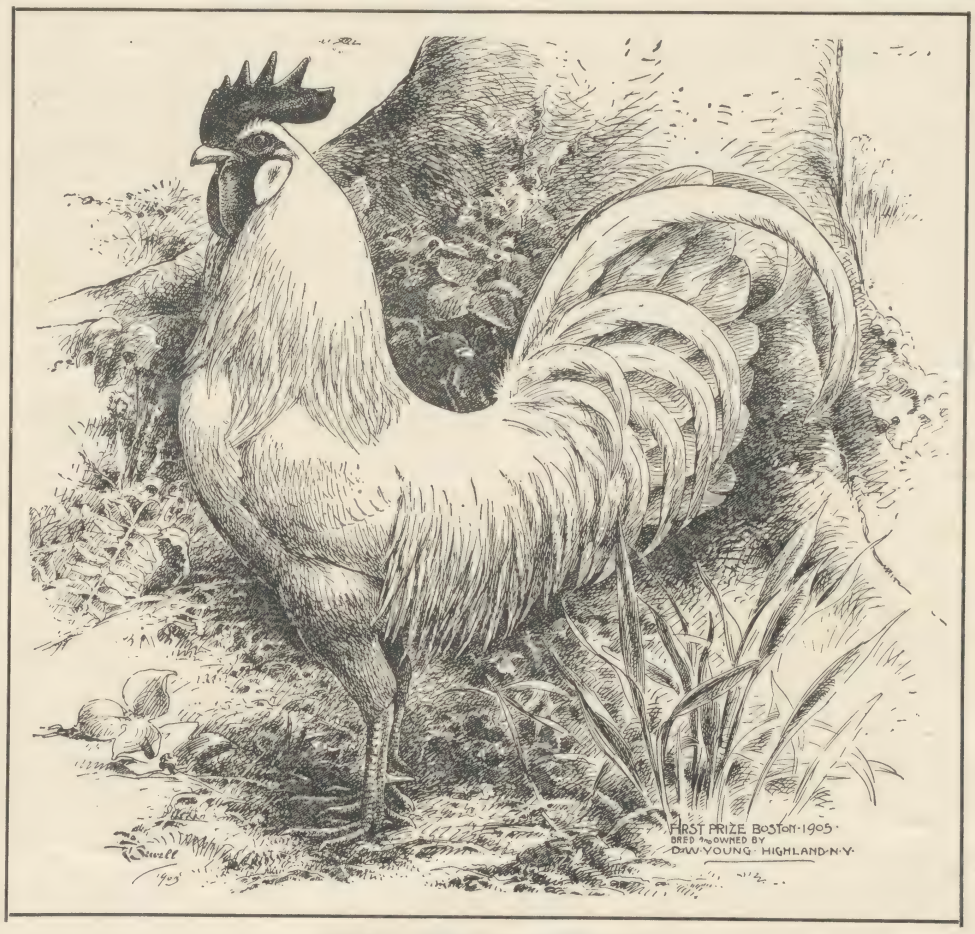
A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV — Washington, D. C., July 22, 1905 — No. 616



THE DIFFERENCE IN LEGHORNS

The entire poultry fraternity understands when the name "Leghorn" is mentioned that it refers to a kind of fowl that is considered to be the best egg producer. In the main, this is true, but there are strains of Leghorns, some of which produce a large number of eggs, and others that do not produce so well. In the egg-laying contests that have been continued for a year, Leghorns have stood, some of them almost in the lead, while others have trailed along almost at the end of the list. This shows the difference in the strain as egg-podurcers. For this reason it is quite as necessary to select Leghorns for egg production as it is to select any kind or breed of fowls for the same purpose.

In reading an article from the pen of one who lived in the country and had made the experiment of keeping Leghorns for egg production, he stated that the first attempt he made had both Rose-comb and Single-comb Leghorns. His experience for the first winter taught him beyond all question that the rose-combs were the best layers of them all, but he states that the pen in which the single-combs were kept was not as complete a shelter from the cold as was the coop in which the rose-combs were kept. The single-combs, many of them, had their combs frosted and did not recover from the injury received until late in the spring. The following winter, the same person kept the best of the Rose-comb Leghorns that had done so well, readjusted—or rather rebuilt—his poultry houses and made them more comfortable than the year before. Some of the offspring from the same Single-comb Leghorns were kept, and other Single-comb Leghorns secured from a strain that the writer knew to be fine egg producers. The result of the past winter was rather in favor of the single-combs last secured. The rose-combs from the old fowls of the year before did even better than the parent birds, the single-combs of his own about as well as the rose-combs, but the best that he had was a dozen pullets that he produced specially from an egg-producing strain. These twelve gave a much higher per ct. than did the other two pens. But in his statement he says that there were thirty of the rose-combs in one pen, twenty-eight of his own single-combs, and but twelve of the purchased in the other pen, all three pens of the same size, and he asked if we thought that the lesser number in the pen had an influence to the advantage of the twelve. Most certainly we think it did.

But this circumstance illustrates the question that we have so often put to the front, and that is, that hens must be bred for producing a large number of eggs, and cared for and fed during the winter months to make it possible for them to produce up to their ability. To do this the hens must have a ration of grain, reinforced by meat and green food, plenty of grit and fresh pure water. If all of the several branches of success, as above described, are provided for, any one should receive a good, profitable egg-yield from Leghorns or any other good-laying strain of fowls that they might select.

One of our correspondents states that he would rather have the Leghorns for eggs, broilers and market poultry of all kinds, than any other breed that he has ever handled. We know that Leghorn broilers are very popular with many, and we also know that if the Leghorn is fed into a good, fat, plump carcass before being killed for market, they are just as fine for table poultry as are any other fowl.

WHITE LEGHORN COCKEREL

But the fact that they are continuous egg poducers is against their being plump and ready for market under the general manner of feeding, yet it is quite possible to beed them into a good plump carcass of reasonable weight and of a size that sells well in the market.

A Favorable Comment

What Commercial Poultry says about "The Gallery of Fame:"

"We don't know who it is, but the fellow who gets up the drawings for The American Fancier's 'Gallery of Fame' is certainly an artist of rare ability. They have all been good, but the one that appeared in the June 10 number was, in our opinion, the best of all. It was a pen portrait of Mr. M. C. Bryant, the well-known Rhode Island Red breeder of Massachusetts, and was the most lifelike pen illustration we ever saw in print. Mr. Howard certainly made a ten-strike when he secured the services of this artist."

Poultry on the Farm

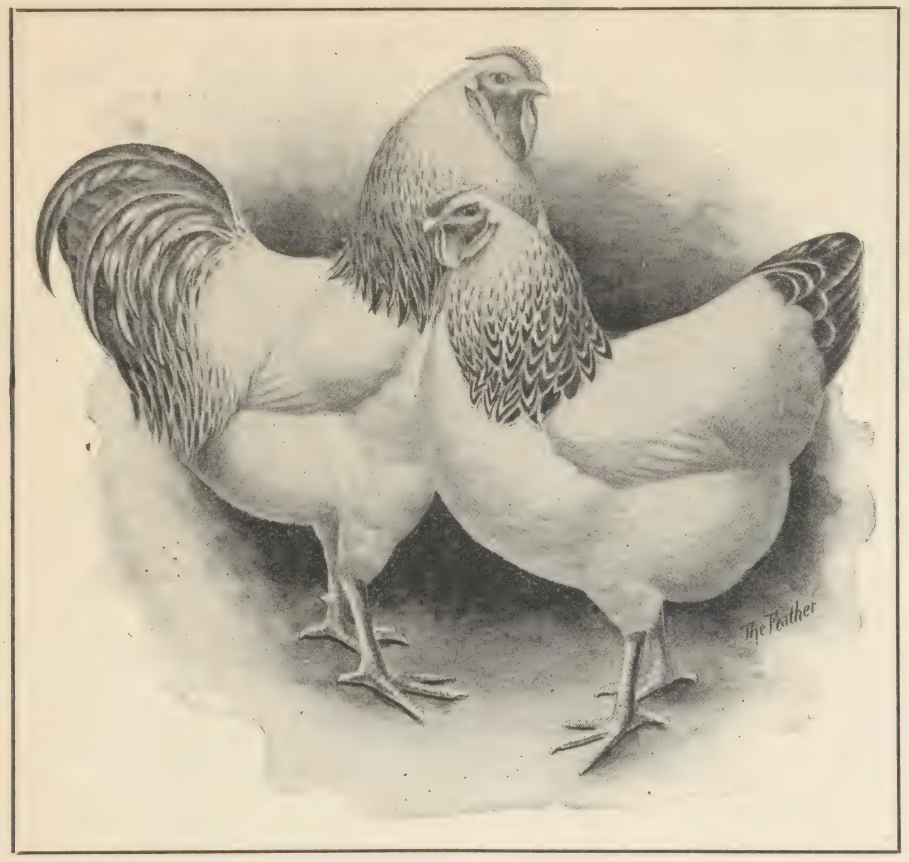
Frequently the question is asked as to whether the farm is the place for growing poultry. No place on earth equals the farm for growing poultry. Thousands upon thousands are grown here every year, and thousands of dollars in return goes to the farming community. If the farmer would feed, care and house his poultry as do the regular poultry growers, there would be an almost unlimited value added to the income of the agriculturists of the United States.

It has been publicly demonstrated in carefully-guarded tents that two thousand hens can be kept upon a farm and produce an average of one hundred and thirty eggs apiece. Five hundred and six hundred hens have been kept in tests that have produced one hundred and fifty-two eggs each. The average product of the hens throughout the United States in the year 1900, when the census was taken, was about seventy eggs to each hen. This brought an income of $250,000,000 to the farmers. If each hen was so cared for as to produce one hundred and twenty-five eggs each, which they could do from the same food if properly managed, it would make the income from eggs from the same hens almost $500,000,000.

Such a return would add to the income of the farmers throughout the United States almost $150,000,000 more for eggs as the result of proper care and attention. This is only one of the many additions to his income that the farmer could gain through skilful management. Many of them who realize this are adding largely to their income in this way.

In some parts of Kentucky and Tennessee the poultry interest has so increased as to attract the attention of the state government and agricultural departments, and they are making an extra effort to help the people to add to the income of the agricultural element of the state through poultry farming. The South is full of great possibilities in this line, and if there were one-half as many eggs produced below the Mason and Dixon line as are produced in the northern section of the country, the South would add to its income, through the keeping of poultry alone, almost a hundred million of dollars. When you stop to consider the masterly effort that is being made throughout the southern country in the interest of cotton growing and the total value of the cotton crop of the South, you will find that it would be greatly to their advantage to add to the product of the cotton the hundred or one hundred and fifty millions possible for them to obtain through growing poultry.

There is but little danger of a surplus of poultry and eggs in this country, providing the quality is high-class. We should discourage any one from attempting to make money through growing indifferent or poor quality poultry and eggs; but if they will produce the very best quality which has a ready demand in all the markets of the world at remunerative prices, they can all add very largely to their incomes.



Fruit and Bees

The combination of growing fruit trees and keeping bees with poultry and squabs is gaining every day with those who understand the proposition. In a conversation a short time ago with one thoroughly well acquainted with this plan, he gave the information that on a farm of seven acres he had kept a hundred stands of bees, six hundred Leghorn fowls, and had grown and marketed over $500 of small fruits, pears, apples and peaches, all the product of trees, cherries being one of the most profitable fruits grown.

Said the speaker: "The blossoms that come upon the fruit trees furnish good work for the bees, and the bees help the fruit by working among the pollen of the blossoms. The clover that we grow for our cow and our poultry produces a heavy honey supply. The poultry houses are so constructed as to have the squab houses above them, and to prevent the pigeons from occupying the same ground for a fly-away that would be used by the poultry, open lofts are built on the outside, and flooring placed in same. The poultry can roam over the same land upon which the fruit and clover are raised, these being the only crops grown upon the farm, except a liberal sowing of oats in the apple and peach orchard, which is cultivated two or three times early in the spring with the harrow.

"Of course the bees draw a large portion of their honey supply from the surrounding neighborhood, as the seven acres of ground would not furnish sufficient blossoms for them. No one in the neighborhood of this farm has ever complained to the owner of the presence of the bees."

We think there could not be any better combination for the making of money than growing squabs, poultry for market and eggs, tree-fruits and bees.

COLUMBIAN WYANDOTTES

The Care of Goslings

Goslings are very delicate and tender until six or seven days old. Even after that they are easily drowned by a heavy rainfall, or, if they get into a pool of water from which they can not get out readily, their down becomes water soaked, and they will be drowned. It is well to keep the mother goose and the goslings in confined quarters until they are a week old. Feed them upon clean, stale bread, not moldy or sour, mix with a little milk—boiled water will do—but nothing is so good as bread and milk for the first few days. Always have them in a lot where they can eat as much grass as they want. Never feed them a food that is too moist and sloppy—it should be like a well-prepared mush for the table. During the first week, when possible, provide a small lot for them to stay in that has plenty of grass upon which they can graze. Give them a plentiful supply of green clover, grass, wheat, or rye, cut very fine.

In making a mash food for the young geese, take ground oats and run it through a sieve so as to remove as much of the chaff as possible, mix this with equal parts of bran and corn meal, and moisten it with scalded milk; mix into a dry mush, and feed this to your young goslings. Never feed young growing geese whole corn or whole grain of any kind, if you wish to grow them the most profitably. Always feed them on ground meals, mixed either with scalding milk or water. Some people feed them whole corn, whole oats, and other whole grains, but this is not nearly as desirable as to have the same grains ground into meal and fed as above described.

Geese must have plenty of water to drink and to swim in, and enough ground to roam over so as to have plenty of grass and other herbage. They gain the greater part of their living from eating green stuffs of all kinds, bugs, small water insects and everything of that kind, including beetles that are found about marshy places. Marshy limits are the best for the young goslings, just so they can have a dry spot on the high grounds for a resting place where they can go during the daytime and upon which they can sleep at night. Geese usually prefer to lodge during the summer nights on the highest ground available, rather than in a shed or under any covering. Of their own will, they will scarcely ever seek the shelter of a house, except in very cold, snowy weather.

Goslings must be sheltered from the direct rays of the hot sun during the summer months. We have known those who grow them in barren fields to erect shelters made from branches of saplings or trees, or by stretching canvas over poles or racks; but any one who keeps geese can very easily construct a grape arbor and grow a thick covering of grape vines over it for the summer shelter for the geese and poultry.

A Visit to the Yard of Chas. M. Smith

I visited the yard of Chas. M. Smith on the Fourth of July, and as I have never seen so many good birds in so small a space, I thought I would write you.

Mr. Smith only has a large back yard, but breeds Buff and White Cochins and Black Rose-comb Bantams to a degree of perfection seldom reached by fanciers. He has nearly forty of these pets in a house 14x20 feet, well built and conveniently arranged. An 8x20-foot passage runs the length of the house. This is fitted with exhibition coops, work bench, feed bins and a desk, also a bone cutter and chairs for visitors. The house is well lighted and by means of ventilators the air is always pure. The other section, 6x20 feet, is divided into six pens (there being two for each variety) and contains six females and one male.

In such a house they seldom contract a cold and seem to thrive better than if on the colony plan.

Mr. Smith does all his hatching under hens, setting one or two every week right through the season. The rose-combs are very good layers, but with the Cochins it is a different matter and takes lots of patience to start them laying. The Cochins, when hatched, however, seem to grow better than the others. Mr. Smith has succeeded in raising nearly one hundred chicks, all fine ones. When I saw them there was not a runt in the lot. When asked about the feed he said that Spratt's Patent and Cyphers Chick feed had been used with the best results.—Herbert B. Rowedder.

BROWN'S BUDGET

Excellent idea. Hagerstown will offer a "loving cup memorial" in honor of John L. Cost. It will be for best cock, hen, cockerel and pullet in Light Brahmas. Probably it is just what he would have done had he been spared. Such a cup will have a twofold value. Evidently the liberal precedents established at Hagerstown are to be continued.

The association will also put up two hundred dollars in cash specials. The meeting of the American Poultry Association as an additional attraction should result in a big show and the Light Brahma class should break all records.

The continued rainy weather has brought about, in Maryland at least, an almost universal complaint of gapes with late-hatched broods. Hardly a chick in a brood but what is affected. The best remedy we know of—we have had more success with it than any other—is to make a very strong solution of asafetida. Put several lumps the size of a filbert in six ounces of water, and shake until it looks milky. Take a stiff flight feather and strip the quill except a portion at the end about one-fourth inch wide and about an inch long. Dip this in the solution and soak until soft and pliable, then twist it around so as to make it in shape to insert in windpipe. Hold the chick's feet between the knees, open its mouth, straighten up the neck, and when it breathes you can see the opening of the windpipe. Insert the feather—be sure to hold neck up straight—and run same well down and remove it slowly with a slight twirling motion. It will generally bring up a worm or two, and probably causes others to let go, as the asafetida is too strong for them.

During extreme damp weather after the coops are cleaned they should be turned up on one side to let the sun and air have a good chance to dry the floor inside and out.

Now is the season to separate the sexes of the old birds to give the hens a rest. The early-hatched chicks should also be separated soon after the cockerels commence to crow.

Don't try to feed the late-hatched broods where the early chicks will annoy them. If they must run together, have a spacious lath or wire coop with opening suitable in size for the late ones to pass through and scatter their allowance of food there so the older chicks can not rob them of their rations.

It is about time you selected some of the promising early youngsters for the fairs and poultry shows. Don't rely upon a single cockerel or pullet, but select several you consider will come out all right. Some will doubtless surprise you by their improvement and some by the lack of it.

Don't let up in attention because the weather is so enervating. The fowls are suffering too, and neglect at this time will indeed prove costly. Remember yarded fowls are really at your mercy. They survive or perish according to your treatment. They drink freely of water, if it is cool, but when it has stood for hours in the sun the water does not relieve their thirst any more than stale warm water would a human being. So keep their vessels clean, in the shade, and frequently replenish with fresh cool water.

Freshly spaded earth in shady spots both fowls and chicks enjoy. They delight to pick it over and to take a bath in the finely pulverized earth. Their evident enjoyment will more than pay you for the trouble.

The old-time low prices of summer eggs seem to be past history. The more eggs and poultry produced the greater is the demand. No danger of overdoing the business if you are producing first-class products. It is always the poor stuff that drugs the market. Quality rarely ever is produced in quantity beyond the general demand, and people willingly pay good prices for quality in any product.

If you haven't made a close study of the breeds you are working with, you can not make your cullings very early. The poor pullets will become later on a source of profit from egg production, but the inferior cockerels should be sold off as soon as possible, if they are of marketable size.

Does It Cost You—

TIME to read through the daily and weekly newspapers, the magazines and reviews, and the special journals that constantly clamor for attention? Can you find time to read enough of them to keep posted even on the important topics of human interest at home and abroad? Does the time demanded by so many periodicals leave you time enough for books?

DOES IT COST YOU—

MONEY to buy even a fairly representative list of papers and magazines? Can you afford to subscribe for as many as would be necessary to give you a complete survey of the world's politics, art, religion, industrial affairs, literature, etc.? Even if you had the time to read them, would you be able to buy several thousand periodicals, domestic and foreign?

DOES IT COST YOU—

WORRY to sift out the conflicting rumors concerning the Japan-Russia war, and to try to follow its progress? Or to get at the true meaning of every great industrial, political, and economic question before the people at the present time? Does it worry or weary you to "keep posted" in this busy, hustling age when there are so few moments for quiet reading and so many demands for your money?

Why Not Take This Tip—

"THE LITERARY DIGEST is a time-saver, a money-saver, and a worry-saver," says Edwin Markham, author of "The Man with the Hoe." It gives you in an hour or two, for only ten cents a week, a complete survey of the world. All the leading dailies, weeklies, monthlies, and quarterlies of America, Europe, Asia, Africa, and Australia contribute their best to its pages. It gives all sides of all questions, and organized information on all topics. At all newsstands, every week, illustrated, ten cents. 616-617

The Literary Digest

BOYER'S TALK

TABLE POULTRY

One of the secrets of success in marketing poultry is to always have a regular day for shipping. This is equally true in catering to the wholesale and retail trade. If your goods are right, people will look for them.

As a rule, buyers are particular—often they are cranky. It matters not what their whims are, it is your duty to cater to them. If you have what they want, they are ready to pay the price, and that is what you want.

You can not force people to buy if they do not want to. The best business principle is to tempt them with your goods, and if you can command their attention they will do the rest.

It pays to guarantee your goods. If you are selling eggs, assure your customers of the age and condition; if poultry, tell them of the age and tenderness. Guarantee to make good any shortcomings, and you will gain customers that will mean much to you.

Talking about poultry calls to mind the foolishness about color of skin. The American people have gone mad over the belief that a yellow-skinned fowl is richer in flavor than a white-skinned one, and they will have no other if they can help it, and yet they will buy turkey and duck, and gloat over them. They lose sight of the fact that both the turkey and the duck are white-skinned birds.

Your goods will gie you a reputation. If you haev what the people want they will stick by you, and will recommend you to others. It is remarkable how quickly the housewives can bring custom to the vender of wares according to their taste.

Market poultry should be raised in runs. Free range will toughen the muscles, and a six-months-old bird will be as hard and firm as a yearling. Those birds raised in limited enclosures, and fed the proper feed, will be as tender as free-range birds half their age.

The regular marketer always commands the best trade and the best prices. People have faith in the man who comes on a fixed day each week. They know he has a reputation to take care of, while the transient huckster is here to-day and there to-morrow, and has all to gain and nothing to lose.

Dressed poultry should be in a strictly first-class condition. It is better to sell poultry alive than to present it in a poorly dressed condition. The best of argument will not patch up a poorly-dressed carcass.

The juicy broiler is a product of rapid maturity and pure food. It is the same as in the vegetable kingdom. With vegetables, quick growth on rich soil means crispness and flavor. It is so with poultry.

The carcass should be attractive—both to the eye and palate. Such goods win permanent customers. Each carcass should be tagged so that the buyer will know what to ask for in market. It always pays to produce the best and then advertise that fact.

Do not bite at the tempting offers sent out by new commission merchants. If you are dealing with a fair and square man, stick to him. It will not pay to make a change, even at an advance, for the old merchant is more apt to stick by you in cases of a glut. These new commission firms are very often wild-cat schemes.

Texas Farm and Ranch says that mongrels do very well for family use, but are no good for market. In these days of competition, appearance as well as merit is required to sell goods.

Since it has been clearly proved that a broiler can not be secured on free range, and as only by a systematic feeding of pure foods it can attain the required weight in a given time, it carries with it a reputation and demand on account of its juciness, tenderness and purity

THE EGG BUSINESS

Be careful how you market. Keep cracked eggs out of the shipment, and never send out an egg that you can not guarantee strictly fresh. One bad egg is the worst advertisement that your goods could have.

Eggs should be kept in a cool cellar, and so placed that the air can strike them on all sides. To keep them in a box or basket is about the best way to age them and make them stale.

Our neighbors keep hens and feed nothing but corn. We feed wheat, oats, and a little cracked corn. Our neighbors get their breakfast eggs from our farm.

Stamina makes eggs, and new blood makes stamina.

Neither the over-fat nor the starved or under-fed hen is a good layer. Poultry feeding is a science worth studying.

The best laying pen can be spoiled by poor feeding and indifferent care.

For capital, labor and territory, the hen is more profitable than the cow. An egg farm will not require the investment nor the labor of a dairy, and the profits are greater.

Our American breeds are becoming more popular for egg farming than any other varieties or class. The white and buff strains, for this purpose, seem most in demand.

It is not so much the breed as the feed and care given that builds up a family of layers. A pen of Asiastics can be made better layers than a pen of the Mediterranean class, if the former is in the hands of a good poultryman, and the latter receive only indifferent care.

Fowls should not only be fed regularly, but should receive practically what they need each day, to insure a steady production of eggs. "A feast to-day and a famine to-morrow" will cripple the egg yield about as quickly as anything we know of.

The secrets for egg production are clean quarters, comfort, a dry location, fresh air, fresh water, and pure egg food.

The early laying of pullets is rather uncertain. Occasionally we find them laying every other day from the start, but more frequently they drop an egg, then wait seevral days before they produce another. Again they will go by splurges for a given time, when they drop again. It becomes quite a study to keep pullets laying regualrly, but we believe from the experience that we have had, that a regular system of feeding, coupled with plenty of exercise, will do it.

It is not a difficult matter to check egg production. Undue excitement will often make a big difference; catching hens in the pen during the daytime is harmful; moving layers to new pens has its bad effects. A strange dog on the premises gives the fowls a bad scare. A woman appearing on the farm where the fowls are attended only by men, and especially if the woman wears colors makes the fowls excited.

In taking care of poultry, a person should move slowly about them. A helter-skelter fellow, one who rushes to and fro, will have the hens so upset that they will become wild, and wild hens are not, as a rule, profitable ones.

The cold-storage people are wise. They aim to get all their eggs on the market before the winter is too far advanced. As February is a good laying month on a poultry farm, these refrigerator people know what they will run up against a hard proposition when plenty of fresh eggs are placed on the market.

It is natural for a hen of a good laying strain to lay regularly, providing she receives the proper food and care. She must have both to the fullest extent. Neglect and shiftlessness will quickly undo the finest prospects.

"The hardest task in maintaining a constant and continuous egg yield is to keep the laying stock in prime condition," once wrote Col. E. O. Roessle. By that, Mr. Roessle meant such a condition of perfect health that the eggs will not only be regularly laid, but that they will be of uniform size, according to the breed laying them. When such breeds as Minorcas, White Leghorns, our American breeds, and Brahmas lay small eggs, the stock is out of condition and usually over-fat. The eggs will not only be laid irregularly, but in many cases laying will stop entirely. Small eggs, badly-shaped eggs, double-yolked eggs, and soft-shelled eggs are all indications of a diseased condition produced by overfat.

WHAT AND HOW TO FEED

Sunflower seed act as a laxative.

Bowel complaints are often due to sour or musty food.

About five years ago some interest was started up in Marsden food for poultry, but we do not hear anything of it to-day. Marsden food is practically ground corn stalks.

Alfalfa is becoming more popular every day as a green food for poultry, and is claimed to be superior to clover for supplying nitrogen.

Gage the amount of food according to the appetite of the fowl. We do not believe in giving as much morning mash as the hens would demand, for in such a case they will be inactive for the best part of the morning. What they really need is just sufficient to partially satisfy their hunger, but at night they should have all the grain they will eat up greedily, and no more.

Active fowls are always hungry. An ailing hen, or one out of condition, will pick up a few grains and then walk away. Where it is noticed that the flock do not eat up their usual allowance, it is best to cut down their next supply.

There is more science in how you feed than what you feed. By that we mean, the allowance must be limited according to the condition of the fowls, the birds must be made to exercise so that they can thoroughly digest the food, and the quality must be of such a nature as to meet the required object.

Pure, wholesome food is always the best and cheapest, regardless of its cost. To feed burnt or damaged food, simply to save a few dollars, is the dearest kind of food. Smutty and mildewed grain is especially dangerous.

We know of no food so valuable for bringing pullets into laying condition as whole wheat.

Impure food quickly induces indigestion, which is apt to be followed by chronic dyspepsia and other ailments.

As a matter of cost, nitrogenous food is more expensive than carbonaceous, but still the former is more profitable, as it gives more eggs, better size of eggs, stronger fertility, more vigorous offspring, and better health generally.

We never advocate a diet of a single grain. To feed either wheat, oats or corn, separately, is very apt to produce bowel troubles. Editor McReynolds says, as an exclusive food, there is nothing that will kill more fowls than shelled oats, and no food will bring on the so-called "cholera" as quickly.

AILMENTS AND REMEDIES

Be on the watch. Note the first symptoms of indisposition, and then make a change of food and surroundings. An indisposed fowl will, as a rule, quickly revive if taken out the pen and given a regular grass run with very little of anything else to eat.

To lay the foundation of a strong, healthy flock, it is necessary to breed only from strong, healthy, vigorous stock.

Dr. W. F. Roth says the origin of roup is usually found in unintelligent care, filth, cold drafts and dampness, a low standard of vitality and often by infection. Be careful then that all birds bought are healthy.

Editorial Gossip

We notice that Mr. F. D. Coburn, secretary of the Kansas Board of Agriculture, has taken a live interest in the product of poultry throughout the state. In speaking of the value of the poultry products of Kansas, he states that the product would pay the entire state and city taxes, and leave a comfortable balance; that they produced last year twenty-three per ct. more than was paid to school teachers and superintendents; that it would have paid three times the value of the school sites, buildings, furniture, rental and entire outlay of the schools and libraries. Also, that the poultry product of the state was worth almost as much as the cattle upon the ranges of Colorado, New Mexico and Utah, and that the egg product alone sold in the state was worth more than all the sheep owned in the six New England States and New York included.

This is a sample of what the American hen is doing for the entire country. Poultry keeping is a proposition that may be taken up by every one in towns, villages, and upon the farm who has land enough to devote to the purpose. Poultry can be kept anywhere that vegetation grows. Housing sufficient to protect them from the rigors of the winter, from the storms and the inclemency of the weather must always be supplied if a successful result is to be hoped for. At the same time, those who become so enthusiastic as to desire to start in with several thousand hens usually make a failure of such a venture, unless they are thoroughly versed through experience with all the ins and outs of poultry growing.

We have a number of propositions laid before us in the last few months pointing to the establishment of large poultry plants for several thousand hens by persons who have never had any experience whatever with the growing of poultry. We always discourage such ventures. One of these, recently presented, was for the establishment of a $25,000 plant. We declined to have anything whatever to do with it. The promoter immediately said: "Do you think there is any money in the poultry business?" We replied that we knew that there was plenty of money to be made out of the poultry business, but that people of experience must always manage where good results are desired, and that those unfamiliar and lacking in experience should never begin with more than fifty or a hundred hens.

The managment and work of a poultry plant can not be accomplished by a person who is constitutionally weak or sickly. This work demands energy, constitutional vigor, and the qualities of endurance that will stand every-day care, three hundred and sixty-five days in the year, of the poultry. Seldom, if ever, will any one suceeed with a large poultry plant who lacks any of these necessary elements for success.

Nothing is more useful about the poultry farm than colony coops. Mr. Hawkins, of Massachusetts, has a large number of these made of a size that will comfortly accommodate two or three hens with large broods of chickens. For early use these coops are divided off with slat partitions into three apartments, a hen and a large brood in each. As soon as the hens become accustomed to these coops, and the young chicks are old enough to travel about, the partitions and the front are removed and the hens and their broods have their liberty during the entire day. When the hens desert the growing chicks, these colony coops form a living place for the poultry until they are old enough to be separated, when the cockerels are removed to another part of the farm, and the pullets are left to grow and live in these coops, which are plenty large enough to accommodate twenty-five or thirty of them.

It is time that every one who hopes to exhibit at the winter shows was paying special attention to his young and old stock, to bring them to the proper condition for fall and winter exhibitions. Poultry that are neglected during the very hot weather seldom, if ever, are in fit condition for winning prizes at the winter shows. Poultry, to be successfully exhibited, must be in the finest fetter all the time. Health, constitutional vigor and thrift are the three elements most necessary to bring the poultry into proper plumage for winter showing. Poultry that has molted badly, that lacks health and vigor, seldom, if ever, wins a prize in close competition.

The time is at hand for building new and remodeling old poultry houses that are to be used the coming winter. Do all this work while the weather is warm and the ground is dry, so as to avoid the dangers of building houses upon damp or wet places. The result coming from this is most disastrous. Dry, cool air or a dry cold interior is seldom injurious to poultry, while a damp, cold interior and damp, cold surroundings are almost certain to produce unhealthy conditions which materially handicap the possibilities for success with poultry keeping during the winter months.

The beginner in poultry matters should be very careful in the outlay and expenditure of his money when he first begins. Begin in a small way, with a comfortable house and a few fowls. Learn their ways, their necessities, and the chances for success with them. An outlay of time and labor upon your part will be very much more advantageous to you in the end than can possibly be an extravagant outlay of money. There is no business in the world that calls for greater care than the poultry business. You must learn to walk before you run to become successful, and those who begin with an extravagant outlay of funds usually end the season disappointed and discouraged, while those who begin in a small way, and work hard at it, are frequently successful and become the champions at the winter exhibitions and poultry shows.

Every one interested in poultry should make it his busines to do all he can to assist the beginner. Those just starting in with poultry keeping are always the most enthusiastic. If all who come in contact with them would assist in advancing and improving the knowledge and ability of these inexperienced breeders in the business so that they may become successful, there would be a much larger increase in the growth and demand for breeding stock. There are entirely too many instances of people who have been blindly led into a much larger outlay than they should have made in the start; the results, a deserted plant, a disappointed beginner, and one more added to the list of those always outspoken against the possibilities of that in which they have made a failure.

There is at this time an unusual demand for the best egg preserver. It is generally admitted that nothing will keep eggs better than the solution of water glass, so much written about. This is a solution of what is known in the drug store as water glass—a preparation of soda, called silicate of soda; one part of this to ten parts of water. As soon as the eggs to be preserved are laid, they are submerged in this solution—the very same day—and kept in a cool, dark place. The water glass closes every pore in the egg shell and prevents evaporation and outside contamination as well. We have known fresh-laid eggs, perfectly free from the germs of fertilization, to be kept over an entire winter from fall till early spring and be as good for food as were any of the cold-storage eggs offered for sale. Fertilized eggs do not keep so well, nor is it best to place the eggs in this solution during the heated term when the thermometer goes to 85 or 90. The temperature should never exceed 65 or 70 during the period in which eggs are gathered to be placed in cold storage, or to be submerged in this kind of egg preserver.

When the eggs are taken from the solution of water glass, they should be immediately washed in lukewarm water before the solution has an opportunity to become hardened upon the egg shell. When the solution is allowed to dry and harden on the shell, it forms a very thin coat all over the shell very much like thin glass. When this coating is upon the eggs, and they are used for soft boiling, as the shell is broken the fine particles of glass are apt to become separated from the shell and mingle with the egg. For this reason, it is always best to rinse them in lukewarm water so as to get rid of all the solution that adheres to them when taken from the jar of preservative.

We learn that there is a new method for keeping eggs good through sealing the shells and making them entirely air tight. This process is cited as being used in the state of Kansas. Ages ago they covered eggs with a coating of shellac, fresh beeswax and other material that would make the shell perfectly air tight, and the eggs were successfully kept in this way. We trust that none of our readers will be led astray through unlikely promises or expectations as to keeping eggs in this way. Each day an egg is kept, no matter by what method, it becomes one day older and just that much further away from a fresh-laid egg. Fresh-laid eggs will always be the valuable hen product in the market. The preservation of eggs, either by cold storage, liquid preserver, or any other method of keeping them, only suspends or retards the deterioration of same. All these plans and methods are like the keeping of any perishable material any length of time. The method keeps the goods from spoiling, and never makes it possible to leave them as fresh as the fresh article.

Charcoal is a good thing for the poultry, but it does not follow that you should burn all the corn you feed your poultry into charcoal. Some recommend it, but we think you had better feed your corn in proper condition, and provide the charcoal as a side dish.

A SPECIAL Combination

In order to more thoroughly complete our plans of organization, we have decided to make this Special Combination Offer to all lovers of Poultry and Pigeons of

The Feather and The American Fancier

ONLY ONE DOLLAR for BOTH PAPERS for a WHOLE YEAR

We are positive there never was a better opportunity for securing the Cream of Poultry and Pigeon Literature than is to be found in this combination. You get a paper every week edited and illustrated by the best talent in the country. It is a rare chance, and you can not afford to miss this combination. Send a DOLLAR BILL without delay and have your name on our list. Address,

The HOWARD Pub. Co.
714 Twelfth Street N. W.
WASHINGTON, D. C.

All's well that ends well. Secretary T. E. Orr has furnished the bond required of him. According to Editor Shureman of Commercial Poultry, the bond has been reposing in President D. Lincoln Orr's safe since May 1, 1905. We are also informed that Secretary Orr did not refuse to furnish a bond and that he was not to blame for the delay and that some one else was responsible for his "holding up."

Our editorial brother in the Hub must have had a midsummer night's dream when he sprung that little tale about givin one hundred dollars to Ex-Secretary Bridge in order that he could pay a bill he owed to some one. The facts of the case are: Bridge was requested to resign by this committee of three who inquired into his affairs the day before the meeting at the Pan-American, Buffalo, N. Y., this committee not being satisfied with the way the secretary was conducting the business of the American Poultry Association. Bridge asked to be retained in office until the annual meeting to be held at Charleston, S. C., in January. The one hundred dollars was voted to him, as near as we can recollect, as a part of the unearned salary caused by his resignation four months prior to the annual meeting. There was no charge of embezzlement made at that time, although there were a few members who had their suspicions that all was not as it should be with the financial affairs of the American Poultry Association.

Editor J. F. Schureman in the July issue of Commercial Poultry remarks:

"It seems to us that this is an opportune time to bring up the subject of breaking away from that foolish custom of electing the president from the state in which the annual meeting is held. As a matter of sentiment this is a very nice custom, but sentiment should have no part in ruling the affairs of a business organization such as the American Poultry Association is supposed to be. There are good men in every state, to be sure, but there are times when the interests of the association would be better subserved could a man be placed at its head who might be a resident of another state than that in which the annual meeting is held, and at such times the association should be free to take such action as might seem best. The Ohio members of the association could not consistently feel aggrieved should the association select a man for president from some other state at its Cincinnati meeting, in view of the fact that the present incumbent's predecessor in office was an Ohio man. We do not want the Ohio readers of Commercial Poultry to get the idea that we are in any way opposed to the selection of an Ohio man as president, but as we said above, it occurred to us that this would be a good time to break away from the custom inasmuch as the Buckeye state had been so recently honored by having one of its citizens placed at the head of an organization representing one of the greatest live stock industries in the country—the American Poultry Association—and they should be willing to allow the presidency to go to some other state if the association sees fit to take such action."

We fully endorse the above and believe it will be a step forward to break away from the sentimental notion of selecting a president from the state in which the annual meeting is held. Furthermore, there are several candidates for the secetaryship who are Western men, the indications being that a Western secretary will be elected. This should give members an opportunity to elect for president a member from the New England States. The last president from that cradle of the fancy was elected in 1898, at Boston. There is plenty of good presidential timber in the Land of Pilgrims and the Home of the Plymouth Rock.

Ohio certainly has had much to do with the affairs of the American Poultry Association. The Cleveland meeting, in 1902, was a very warm session and history was made rapidly. The illustrated Standard was fairly launched at that meeting. An Ohio member, Mr. McClave, was elected president, and an ex-president of the Buckeye state, Mr. T. E. Orr, was re-elected secretary of the A. P. A.

There will be a show held in Cleveland, Ohio, January 29 to February 3, 1906, under the auspices of the Cleveland Fanciers Club Co. (incorporated). The officers are: F. E. Pile, president; vice-presidents, Chas. McClave, D. B. Smith, G. E. Conkey, M. W. Wood; secretary, F. L. Gruehl; treasurer, Will C. Trapp. The judging will be done by comparison, and the birds will be caged by the Empire Cooping Co. This will be good news to fanciers and exhibitors who remember the well-managed shows held in Cleveland several years ago. The men back of the present association are among the best fanciers in the city and state, which is a guaranteed that the exhibition will be conducted in a businesslike manner.

The Poultry Publishers Association met at Indianapolis, Indiana, July 19. The long-felt want of needed reforms will now have a chance to make a hit or be hit.

Our Friend, Phil Feil, has a rather breezy article on misjudging of fowls in the show-room, which appeared in the July number of Commercial Poultry. He incidentally whacks some of the incompetent judges and managers of shows. On the protest question Mr. Feil writes:

"You often see in your journals that such and such a judge 'gave excellent satisfaction and there was not a single protest,' even at St. Louis. There are reasons for not protesting. In the first place, you lose your money every time; second, you do not want to be laughed at because you lost your money. I protested once myself, and it cost me just $2.50 to know, or rather find out, that some people would steal."

The most effective protest is to stay away from a show whose managers fail to employ qualified judges. That's all.

Mr. Feil winds up by saying:

"What we want is a uniform system for judging—something to say who should or who is competent to judge, compel him to do the right thing or let him down and out. Place a little of those rules and regulations on him that you put on the exhibitor, compel him to let the best bird win, and skin games and friendship to cease in the show-room."

We are of the opinion that rules and regulations are printed in most premium lists, governing the conduct of the judges. If the rules are not enforced it is the fault of the executive of the association holding the show. We all want a uniform system of judging, but Mr. Feil, by his own statement, regarding the variation in the scores of some of his birds under different judges, viz., 88 points one week and 95 or 95½ points the following week, shows up the difficulty in attaining uniform results by the score card. Some years ago several judges started in to cut birds for all they were worth and strange to say these judges have not judged at the same show since. The scores were too low to suit the commercially-inclined exhibitors who desire to sell birds by the card and every half point higher means the addition of several more simoleans. We read and hear much from these theoretical purists who boldly state their belief in honest scores, no matter how low they may be. But let one of their own birds be placed on the pan and roasted down below ninety points, and the circus starts and the band begins to play. It's a case of "back to the woods" for the judge that had the temerity to do what he thought was right. Yet there still exist people that believe a Barred Plymouth Rock male can score 95½ points!

As to Mr. Feil's allusions to "skin games and friendship" in judging, the only way to stop that is to expose any and every such deal, provided the absolute proof is at hand. But we are not certain as to where the most blame is to be placed, i. e., on the society employing such a judge, or on the latter.

In a recent issue of Pigeons and Poultry, England, a very clever story was told concerning the employment of judges. The characters, while imaginary, nevertheless reflected a state of affairs that does exist in the fancy. Briefly speaking, the "plot of the story" is to the effect that a competent judge was approached by a large exhibitor and given to understand, by the latter, that the birds in such and such a pen were simply elegant, etc., and incidentally some nice words said about the judge. The latter, however, attended to his business, failed to take the advice or tip from the exhibitor, was then round-

Gallery of Fame

F. L. KIMMEY

NONE of our artist's efforts has surpassed the present one representing the businesslike characteristics of Mr. Kimmey, who, as president of the American Poultry Association, chairman of the Revision Committee, and secretary of the Chicago winter show, has proven his ability as a manager of all these branches of the poultry business. We congratulate Mr. Kimmey on the successful management of these several branches with which he has been connected, and we trust that he may continue in this manner until he has brought the American Poultry Association within the lines of proper business methods.

ly scored, and at the next meeting of the club the exhibitor protested against employing this judge again, recommending that a friend of his receive the appointment, which was done. The honest and competent judge was dropped and a man substituted who could not or would not be guilty of offending such a large and prominent exhibitor. The club managers simply truckled to the latter, not desiring to lose his entries. This is what some of the good exhibitors in England call "cheap and nasty." There seems to be some of the same brand in the United States of America to judge by recent statements in the poultry press and developments in some of the specialty judging at several shows last season.

We are indebted to Secretary Luther P. Ludden, of the Nebraska State Poultry Association, for the annual reports for the years 1902, 1903, 1904 and 1905, of the latter. Much interesting poultry literature containing many practical pointers on the chicken and show business is found between the covers of this book.

The Fanciers Association of New Jersey at a meeting of the stockholders recently held at Newark, N. J., declared a dividend of 5 per ct. and a check covering the amount due each stockholder was promptly mailed. This is a fine showing and indicates what good financial management can accomplish, especially when it is to be considered that at the late Newark show no admission fee was charged to the hall.

At one of the sessions of the Nebraska State Poultry Association Dr. Conway, of the Missouri Experiment Station, was asked, "Is lice a disease?" He replied, "I don't know; it's a pretty bad thing to have. The louse carries some disease we don't know what, but I think the little chicks could survive from the irritation more than from any real depletion of the system." The doctor, while not exactly clear in his statements, hit the nail on the head when he spoke of lice as a "pretty bad thing to have." This is the time of the year when lice of all kinds and especially the head lice are getting in their work. Several fanciers in this section have lost quite a number of chickens the past few weeks due to the head louse and lack of precaution in using carbonated vaseline on the crown of the head; in fact some are prejudiced against using lard or vaseline and have paid the penalty in the loss of scores of chickens.

We have not read the statement that annually makes its appearance in print, regarding the cause of gapes. It seems as if the old belief that the head louse causes these throat worms is finally dead for good and all time. It has gone the way of the "horsehairs turning into snake's yarn."

White Langshans are booming in the West, especially in Missouri and Kansas. At the Kansas City show in 1905, where more Langshans are exhibited that at any other show in the United States, the White Langshans outnumbered the Black Langshans, two to one. A White Langshan Club is to be organized at Portland, Oregon, during the Lewis and Clark Exposition poultry show. Mr. A. H. Asche, Princeton, Ill., is acting as secretary for the temporary organization started by Mrs. J. S. Hill, of Purdin, Mo.

This is the time of the year to "break in" the youngsters and start them on the road to stamina and vigor by carefully sorting out the males from the females, removing the first growing broods from the stuffy and small coops and placing them in sheds open to the south and provided with proper roosts, set not too high, with a platform below to catch the droppings. This shed can be closed at night by a wire screen, if there is any danger of cats prowling around. If the pullets can be kept separate, out of sight and hearing of the cockerels, all the better. Both will be benefited. The idea is to keep the birds growing all the time and in the open air. They can stay in these sheds until snow flies late in the fall or early winter; in fact some varieties can be kept there until winter has set in to stay, and even through the winter if the shed is closed at night by wooden shutters and a muslin screen is used in severe cold weather during the day. The main thing is to build the sides, back and roof of the shed tight, covering inside and outside with strong roofing paper. The roosting place should be at the rear end, where the air space above the fowls is the smallest. A sufficient number of chickens should be kept to furnish enough animal heat to keep legs and toes, combs and wattles from freezing during very cold nights. The time to prepare for all this is now. A well-housed and well-fed chicken is a thing of beauty and joy at all times.

White-plumaged chickens that are fortunate enough to have the run of a shady orchard where clover abounds, or a shady field of corn to roam in, will come out in the fall in fine feather and very little trouble will be experienced in getting such birds ready for the early shows. With good sheds provided for them to roost in at night and a goodly supply of mixed grain food always at hand, the color of legs and plumage will be very near what is desired in a first-class show bird. The after-training in coops is of course a necessity, as a well trained bird has a decided advantage over the one picked from the run or house. We have seen scores of White Leghorns raised under such conditions that did not require any washing whatever for exhibition. The plumage fairly glistened, reflecting the perfect condition old dame nature had put these birds in. No artificial preparation could have improved them.

The Macon Poultry Association was organized June 22 at Macon, Georgia, and the following officers were elected: President, E. W. Burke; vice-president, E. P. O'Connell; secretary, James M. Rogers; treasurer, H. M. McKay; executive committee, R. E. Steed, Eugene Anderson, Augustus B. Sparks, A. C. Bhim, W. E. Hill. The object of the new organization is to cooperate with the Georgia Farmers Fair Association and hold the greatest poultry show ever held in the South the end of October of this year. A large membership was secured and much enthusiasm manifested. This body of poultrymen is destined to play a very large part in the poultry affairs of the state. Several successful shows were held at Macon in the past and the chances for future successes in this connection are exceedingly bright.

There is a decided and determined revival in the interest taken in poultry shows in the South, a larger number than usual having set their dates for the coming season. Furthermore, all these shows are being run in the most up-to-date manner. The poultry field in the South is a very large one, whose great possibilities have just begun to be thoroughly appreciated. With cheaper transportation by rail and more equitable and just express rates the South should become one of the greatest poultry and egg shipping sections in the United States. It is up to the express companies to give southern egg farmers shipping rates that will enable them to send crates to northern points at a reasonable profit. With more liberal rates on live fancy and market poultry further benefits will accrue to southern breeders of chickens. The poultry press of the South is doing excellent work in helping the cause, the increase in the number of subscribers and advertisers indicating the great interest taken in standard-bred poultry culture in the Southland.

Mr. C. A. House is contributing several articles on White Frizzle Bantams to the columns of our English contemporary, Pigeons and Poultry. The history, trials, disappointments and final success in breeding choice specimens make good reading for genuine fanciers and clearly point out the necessity of having plenty of patience and unlimited pluck in building up a breed of fowl that is extremely dainty and difficult of reproduction. There are but few fanciers of this variety in England and no specimens have been sent to this country that we are aware of. Mr. House says his first recollection of the breed is between twenty and twenty-five years ago, and the birds then shown came from the yards of the late Countess of Dartmouth, who, it was said, had imported them from Japan, and this, no doubt, was correct, because they were very like the Japanese in character, far more than they are to-day. At the time Mr. House took up Frizzle Bantams no one seemed to know what they should be, so far as comb, wattles and legs were concerned. Some had willow legs, some mottled and slate-colored, some almost white, and some yellow, but not the rich yellow which is now expected and generally seen. This rich yellow leg Mr. House was the means of introducing by a cross made of White Leghorn blood. The single-comb is by far the best combing, harmonizing with the peculiar feathering of the Frizzle in the same manner as does the rich yellow leg.

Dates Claimed

August 22 to 25, 1905.—Wellsville, N. Y. Wellsville Fair and Races. A. S. Stillman, Alfred, N. Y., superintendent of poultry.

August 29 to September 1, 1905.—Hornellsville, N. Y. The Hornellsville Fair and Races. A. S. Stillman, Alfred, N. Y., superintendent of poultry; H. P. Schwab, judge.

September 26 to 29, 1905.—Roanoke, Va. The great Roanoke Fair.

December 6 to 13, 1905.—Charleston, S. C. The Charleston Poultry Association. E. C. Voigt, superintendent of poultry; Dr. S. T. Lea, F. J. Marshall, judges; F. J. McCarty, secretary.

December 26 to 31, 1905.—Oregon, Ill. Ogle County Poultry and Pet Stock Association. W. C. Pierce, judge; L. H. Valentine, secretary.

January 15 to 20, 1906.—Delavan, Wis. Southwestern Wisconsin Poultry and Pet Stock Association. Jas. A. Tucker, Thos. F. Rigg, judges; W. E. Piffer, secretary.

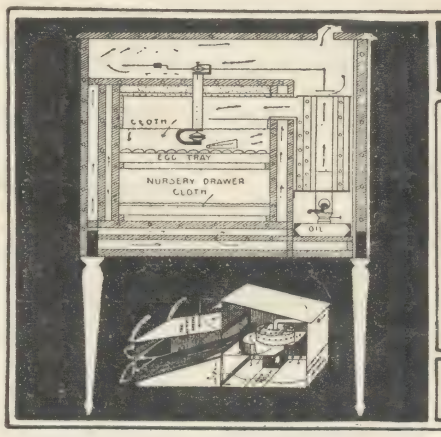
"EGGS, BROILERS AND MONEY"

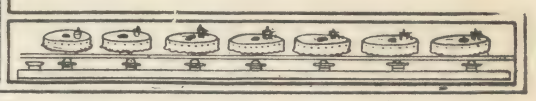


Is the title of a book that tells the breed of fowl with which you can make money. It is a general talk about eggs and broilers based upon an experience. Free for the asking.

LAKEWOOD FARM COMPANY (Inc.)
Burrsville, New Jersey

Breeders of Lakewood Farm Layers, The Great Profi Payers.

A Paper Incubator.



150 Egg Capacity.
Weight, 80 Pounds

HENS SECRET DISCOVERED

This Incubator is a Wonder and the Leader of All Incubators.
Does not require an expert to get a successful hatch.

Made of Paper—the World's best-known Non-Conductor.
As strong and durable as wood.

TESTED. SUCCESSFUL. PRACTICAL. GUARANTEED.

Will heat up in any outside shed in zero weather in one hour, and will use from 50 to 75 per cent less oil than any other incubator on the market.

No even temperature necessary; any temperature between 95° and 106°, like the hen's, will secure a 90 to 100 per cent hatch of fertile eggs.

Our Regulator is tons of air and an even heat not necerrary.

Our Brooders—on the market for the past seven years—have demonstrated to the most exacting that they can raise in them 95 to 100 per cent of chicks.

A Poultry Woman Happy

Worth, Ill., May 15, '04.

Perpetual Hen Co.

Dear Sirs: The incubator hatched chicks on Saturday. Your incubator beat four other well-known makes of different kinds, and I am happy. Your incubator takes the least time, oil and care of any that I have had in the incubator house. It is as simple as setting a hen.

Truly,
MRS. H. P. FRANKS.

A New Jersey Orpington Farm

Pleasantdale, West Orange, N. J., May 25, '04.

Perpetual Hen Co.

Gentlemen: Inclosed find thirty-five dollars and fifty cents for which send me at once incubators and brooders as per order. Your incubator has given us the best hatch of the season and I have six or seven broilers. We have over 1000 Orpingtons hatched so far as Orpingtons can be hatched late in the summer, and mature and lay by fall. We shall keep on until August. Ship the goods at once and oblige,

Yours truly, A. G. GOODACRE.

Send stamp for "1905 Price List and Customers' Reports," or 15c. in stamps or money for a 96-page catalogue, "The Hen's Secrets and Nature's Laws."

Young's Strain S. C. W. Leghorns

I Have No Other Breeds

My strain, again for the 5th consecutive year, shows its superiority by winning more prizes at Madison Square Garden, New York, than all others combined, including cup, medal and four specials. Two weeks later I showed at Boston against the most prominent breeders of the East, winning nine prizes on nine entries over birds that won 1st at St. Louis.

I showed 2 Cocks, won 1st, 2d; I showed 2 Hens, won 1st, 2d
I showed 2 Ckrls., won 1st, 2d; I showed 2 P'l'ts, won 1st, 2d
I showed 1 Breeding Pen, won 1st

Also four specials. This record has never been equaled by any other breed or breeder in America. Stock for sale at all times. Eggs $3 00 per 15; $15.00 per 100. Address 44

BUFF WYANDOTTES

At Boston, Mass., Jan. 17-21, 1905, was held the Buff Wyandotte Club meeting which brought out all the largest and best eastern breeders and the largest and best exhibit ever made. **The Herald Square Winners** were there, the **Madison Square Winners** were there, and **Our Winners** were there and won their usual **Three Out of Five First Prizes,** making **Five Years in Succession** that we have won three out of five First prizes at Boston. This year we also won both second prizes where we lost the first prizes, as follows: **Cocks. 2, 3, 4, 5; Hens, 1, 2, 6; Cockerels, 2, 6; Pullets, 1, 6; Pen 1.**

Please note our record since 1897, given below, and remember this is the ancestry that keeps our strain of this variety at the front, it dont cost any more than the other kind.

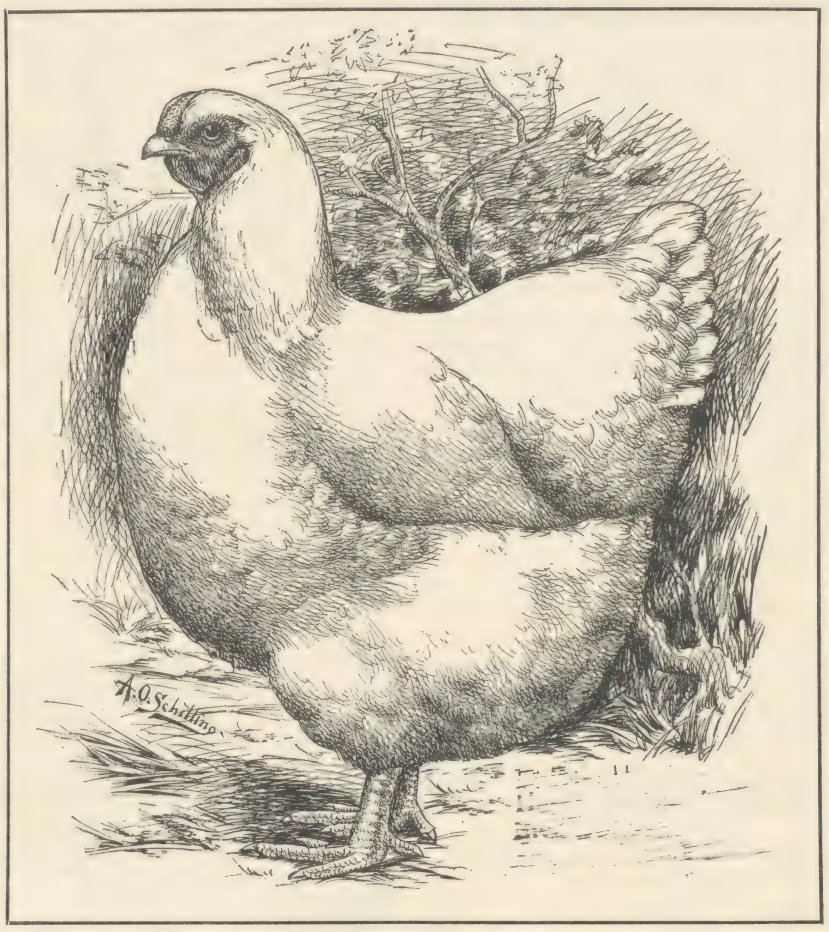
The American Fancier

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV | Washington, D. C., August 5, 1905 | No. 617

THE EGG AND MEAT-PRODUCING FOWLS

The American breeds of Plymouth Rocks and Wyandottes and their subvarieties are classed as "the combination egg and meat-producing fowls, while the Mediterraneans are next as eggproducing fowls. The Plymouth Rocks and the Wyandottes, in all their varieties, are equal to almost any fowls in the production of eggs, and are in addition splendid market poultry. The Mediterranean family will produce more eggs for the same amount of care, housing and feed than any other variety; but are not the equal of the others for market poultry.



In considering these fowls, one should select the breed that will best meet the demands of the locality to which he will cater—if eggs are desired for the market, and the market calls for the eggs that have the white shells, then select one of the varieties of the Leghorn family; if eggs that have the brown shells are required, either the Plymouth Rock or the Wyandotte will be good; if seeking for a combination or a general purpose fowl, select some one of the many varieties of the American breeds. This is the situation, and while there is a distinction in the merits of the different breeds, all of these mentioned are worthy of consideration, and will fully compensate those who select them, if bred and cared for with definite purposes in view. If we choose a breed for furnishing exhibition fowls, we would hardly expect a large egg yield in winter, or that they would bring us a profit in the market, and when we grow for market poultry and eggs, we strive for that alone, and not for the double purpose of egg and meat-producing fowls and exhibition poultry all combined in one.

Do not understand by this that the finest of exhibition poultry is not good for market purposes and for producing eggs, but when poultry is kept for such practical use they can not be preserved in as fine plumage and good flesh as where they are grown for the showroom. But, if these same exhibition fowls are fed for the production of eggs and meat for market, they will yield the best and give profitable returns.

There is so little difference in the egg production in any of the varieties of the Leghorn family that to make a selection is largely a matter of preference. It is true that there are more Single-comb White Leghorns kept than all other of the Leghorns combined; yet there has never been any evidence, either in contests or in private experiments, that goes to prove that the color of the plumage has anything to do with the egg production.

The same is equally true of the Plymouth Rock and the Wyandotte. The Plymouth Rock naturally lays a longer and larger egg than do the Wyandottes; but while the Wyandottes lay a shorter, smaller egg, they will lay about an equal number. When it comes to raising broilers, it is admitted that the Wyandottes will mature more quickly into a short, heavy-bodied, plump broiler than the young of the Plymouth Rock. With this exception there is little difference as to market poultry, proof of this being that there are said to be as many barred Plymouth Rocks sold for market poultry as there are of all other American fowls combined. This rceord is posted, we presume, from the fact that every chicken that comes to market that has bars like the Plymouth Rock is graded as a Plymouth Rock.

In choosing any of these fowls, the the same attention should be given as is recommended for the selection of any poultry; that is, pick out those which meet the demands of your market, keep and care for them in the best possible way so as to gain profitable results.

WHITE WYANDOTTE HEN

Freak Records

Those who fail to gain distinction through other means, seem to seek oddity of performance, and every little while there appears a challenge from some "champion egg eater," or other freak. The forty-quail-in-forty-days performance has been outdone by a man who recently ate a whole goose each day for thirty days, the fowl weighing from six to eleven pounds. Other records in this line are sixty soft-boiled eggs daily in six days, six quarts of beans in forty minutes, smoking fifty cigars in eleven hours without once taking a drink.

A Paris couple recently waltzed without cessation for six and three-quarter hours, while an English actor danced all the way from London to Norwich.

How to Do It

Some time ago you announced that the Cambridge Fair was to have a new superintendent of poultry and that this fair was handicapped by the pair entry instead of single bird entry as it ought to be. There is a remedy for this and it is up to Mr. Riddell now to do it. As he is a new man in the place, this places him in the same position as I was one year ago. At our county fair, which is the only one in the state, there has been a feeling for a long time that the birds ought to be judged singly. It was hoped every year that next year there would be a single entry show. This fair has been in a prosperous condition for thirty years and ought to have an up-to-date poultry department. This year we have a single entry show. I found out accidentally that all this cry for a single entry was never asked for, or even mentioned before the standing committee. The first thing I did was to draw up a paper and asked every exhibitor how he felt about a single entry, and then let them read the paper and out of all the exhibitors that I could reach—I had my assistants do the same just as fast as they brought in their birds—I got them all but two. This was encouraging. The next step was to find out how to get this petition before the standing committee, as the former superintendent claimed he never could find out when this committee met. I inquired of some of the fanciers if they knew of any fancier on that committee. After a while a young man who had been asking lots of questions and who called in my office frequently, came running in one day and said he had found a man that would push this thing through for me. He introduced me to the man to whom I explained my petition, and showed him the names. He then promised me he would let me know when the committee met, and he did so; I went myself and presented the petition and argued my own case. Not one member of that committee refused to hear or grant nearly every thing I asked for, and also admitted a pet stock department, after considering a few minutes.

"Why can't Mr. Riddell do the same thing? He may not feel able to lose the time and car fare. I didn't; but I had promised the boys to see it through as a great many said as they left the fair: "Now get this thing through for us, won't you?" It cost me two days and car fares, but I feel well paid for my trouble. I have done my part and now let the boys do theirs. I hope Mr. Riddell will try it and all superintendents of poultry that are in the same old ruts. They can show in pairs, but should enter single birds. They can try at least. Now don't be afraid because you are not acquainted with the powers of the society. I was a stranger to our committee and succeeded, and, incidentally, they will do anything, or ought to do anything, for the improvement of the fair. But don't let a greenhorn go and do the talking for this thing. Mr. Riddell is the only man to do it. I hope to hear in the future that the great Cambridge Fair has a single-bird entry. I will watch results.—Edgar E. McIntosh.

[We referred to pen, not pair, entries at Cambridge. Birds always competed for single prizes there, but birds in pens were allowed the same privilege as those in single entries.—Editor American Fancier.]

Toronto Pigeon Show

The plan adopted at Toronto for the safe return of pigeons to their proper owners is to many of our readers original, especially where coops are provided by the association as is done in this case. Each coop is numbered and corresponding tags are sent to each exhibitor, giving him the number of coop his bird will occupy. A large sheet of paper is provided with numbers from one to last coop number, and as each bird is removed from his shipping coop to the exhibition coop, the number of the band it wears is set opposite the number of his coop, so that unless birds are not banded or that two birds of the same breed and color have the identical same band, if all the birds in the building were liberated, with this sheet and the association's entry book, every bird would be sent to its proper owner. By this means the loss of birds sent should be stopped, especially when the doors of the coops are sealed by government seals as is done at this show. Furthermore, no exhibitor or other person is allowed in the building during cooping or uncooping, all such work being done by the association. All this takes more time, but then the officials have the satisfaction of knowing that each bird has gone back to its rightful owner.

The judges at the Toronto Exhibition Pigeon Show, September 1 to 6, are as follows:

K. J. Muir, Chicago, Tumblers and Trumpeters; R. K. Barker, Toronto, Fantails; Robt. Scott, Toronto, Pointers and Show Homers; W. Tregwin, Toronto, Jacobins and Magpies; C. F. Wagner, Toronto, all other varieties.—A. W. Bell.

Prices of Exhibition Birds

Editor American Fancier: As a subscriber to your valuable paper, also as a fancier of Silver-spangled Hamburgs and American Reds, I wish to ask a few questions pertaining to the value of exhibition birds. A great many people have the idea that there is little or nothing in poultry, and that seventy-fice cents is about the full value of any bird, and this is about the full sum any bird ever sold for. I am an enthusiast in the poultry business, especially of exhibition birds. If you will kindly answer the following questions, it will have much effect upon these pessimists, and perhaps awaken them to a fuller appreciation of the value in breeding exhibition poultry. Perhaps if these pessimists read The American Fancier they would receive an invaluable insight in the poultry business, and would find that it takes biddy to raise the mortgage.

1. What is the highest price any exhibition bird ever sold for?

2. What is the highest price any exhibition pen ever sold for?

3. What was the value of the first pen of Orpingtons at St. Louis; also the first cock?

4. What was the price the two pens of White Plymouth Rocks sold for at Madison Square Garden last January? I think they were owned by Mr. Graves.

5. What would be the net income of 1,000 birds per year, taking two or three breeds, and among these, the very best of exhibition birds and eggs for setting, say $5 and $10 per setting, also the sale and prizes of exhibition stock?

I ask these questions simply for the interest of those who should try to make more of their opportunities.—Rev. W. Tummeliffe.

Answer.—1. It is claimed that the late Capt Heaton paid £500 for a Blackred Game stag at the Birmingham show, held in England some years ago. £50 has frequently been paid for exhibition Game males by American breeders to fanciers on the other side of the pond. A White Wyandotte cockerel sold for $250 at the last New York show, while several years ago a Buff Rock cockerel sold for $300. The highest price ever obtained in this country Mr. Northup claims to have received from a shipment of Rosecomb Black Minorcas to a customer in Germany. The male bird was valued at $1,000.

2. Four hundred dollars, although there are some that claim to have received $800 for a pen.

3. We do not know.

4. We understand the price was $1,500.

5. A rather difficult question to answer. It all depends on the shrewdness of the breeder in exhibiting, advertising and selling his stock. We know of one old breeder that averages a net profit of $2,000 from his specialty, viz: Barred Plymouths. But he is a very shrewd advertiser and a splendid manager in handling a comparatively small flock to the best advantage. In our own experience we believe a well-managed poultry farm, stocked with standard-bred fowls will average a net profit of 2.50 to $3.00 per capita. Small flocks pay much better than large ones, and in giving figures care must be taken to discount the profits from one thousand in comparison with one hundred fowls. The average flock of one hundred fowls when both exhibition and market play hand in hand. There is no doubt that these figures are often many times larger; but the success of noted breeders and exhibitors is responsible for such.—J. H. D.

The Breeding Sfock

An idea prevails in the minds of some people that to breed good birds it is simply necessary to match together high-class specimens of each sex, and that the result of such a union should be offspring of the orthodox type and quality. While good birds cannot be expected from bad ones, yet youngsters of the highest merit may be, and are produced from the mating together of imperfect specimens. A cock possessing certain properties in excess, matched to a hen deficient in the cock bird's excellencies, but possessing other points in which the cock bird is deficient has been known to produce the greatest specimens. The best breeders are not known in the show room, and the best show birds mated would throw the weakest specimens. It is the blending together of the good and bad that makes the strain of successful breeding.

ODDS & ENDS

A disastrous fire occurred in Washington the morning of July 27. Four large stables were burned. In one of them was kept the grand lot of Homing Pigeons owned by Mr. Water, which were completely destroyed. The loss is estimated at over $500.

At Stanton, W. Va., on the twenty-sixth of July some young men charged with stealing chickens were convicted. The penalty for the offense was twelve months imprisonment. These parties stole something over a hundred chickens and we are glad to know that the authorities of West Virginia recognize the true value of poultry and punished these offenders as they deserve.

Transfer of Stock

To whom it may concern:

All our show White Wyandottes with the exception of five New York winners retained by Mr. Hale, were sold to Maurice F. Delano of Suffied, Conn. This statement is in justice to Mr. Delano as our sales letter said Mr. Hale got them all.

Yours very truly,
Orchard Hill Poultry Farm,
Per D. E. Hale.

The National White Wyandotte Club with its usual enthusiasm has prepared a list of one hundred dollars in cash specials to be competed for by club members at the big Portland Show the first of October.

We are informed that J. W. Miller, Freeport, Ill., has organized a new company under the laws of the state of Illinois, using the name American Incubator Co. This company will manufacture the ideal incubators and brooders. Those who are acquainted with Mr. Miller's determination and push will realize that he is in the field to do business.

We regret to state we have the information that Harry Graves, of Higganum, Conn., is very ill. Our informant tells us there is little hope of his recovery. Mr. Graves's many friends throughout the country will feel badly about this, but let us hope for the best.

As we go to press we learn Mr Graves died at his home on Sunday, July 30.

BROWN'S BUDGET

Eternal vigilance is as much the price of success in poultry raising as in anything else. There is no holiday in the poultry yard. Every day brings requirements which fit in the cogs of tomorrow's necessities. Yet today's acomplishments will not always make tomorrow a day to "let up" in any respect.

The main reason why so many fail with Asiatics is because they do not properly manage the feeding. All Asiatics unless they are compelled to scratch for the main portion of their food will become very indolent and simply lie around and wait for the next meal. Make them scratch among dry clean litter for their food. Their supper should thus be distributed an hour or so earlier even in summertime. A shady place should of course be selected.

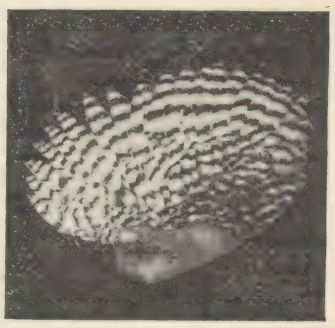
Few know how both old and young fowls enjoy fresh cool water. You may in your rounds, when the drinking vessels are kept in the shade too, find plenty of water in them and conclude because it is there that the fowls have been amply supplied. Throw it out and replenish with fresh cool water and see how quick and eager they will gather around and drink. Stale warm water is not refreshing in any sense.

Am now feeding wheat in the sheaves and letting the hens do the threshing. They do it to perfection. When they see the sheaves coming they meet them with that pleasant song that means the same as the hearty boy's "um um" when he bites into something he specially likes.

Have been trying a little experiment with a couple of broods of latehatched chicks now six weeks old. Gave them a run in a bit of orchard where there is growing corn. Hens weaned them when they were five weeks old. They have had mainly dry food. Mash rarely more than two mornings a week. Cracked corn, boiled oats and wheat, together, alternated with wheat, and once a week at noon stale bread soaked in cold water and all surplus moisture taken out. Never saw any chicks do as well and there is little difference between them and some about a month older. They are Barred and White Rocks and Columbians.

Has any one noticed that the hens that have not, or do not offer to sit seem to molt earlier than those that persist in sitting late in summer. It would be very interesting to know why there is such a marked difference in the molting in a flock of hens of the same age. All have the same food and treatment, but some will be almost completely covered with a new coat before some others show any new plumage at all. Does the short diet for a time, which is then followed with liberal feeding cause the hens to be more uniform with their moulting?

Bill Tomsin says he called on Billups the other day just at dinner time, and was in the dining-room when the city boarders filed in. There were eight of them. Billups had three fried chickens, goodsized ones. Asked all around what part they'd have, and every blessed one of them said a piece of the thigh. Billups said, "As I ain't carrying any fourlegged freak chickens or a centipede, I am too short on orders." Then two old maids blushingly said, "I'll take a little breast please." Billups told Tomsin quietly afterward, "Them are city foks act like parrots, ef ole Gotrox said he'd have gizzard, every consarned one of 'em would echo 'gizzard, please.'"



Get the broods out of their brood coops into colony houses, or more spacious quarters. Sweltering nights will prevent proper growth if they are crowded.

Squabs are raised in one month, bring big prices. Money makers for poultrymen, farmers, women. Send for our Free Book and learn this immensely rich industry. 88

BOYER'S TALK

Notes in Passing

This is a good time to look up the general condition of the fowls. If there are signs of scales on the legs, or if the legs have an unnatural roughness, attention should be paid to them. By taking the matter in hand now, the fowls will be fit for breeding when the time comes. We know of nothing better than vaseline in which is mixed enough sulphur to make a good paste. Wash the legs with warm water, and, after dry, coat them with this paste. A few applications will put the legs in good condition.

Another matter to look after at this time is heavy breathing or "rattling in the throat." This is a sort of bronchial affection, and can easily be cured if taken in time. Visit the houses at night, with a lantern. If the rattling is heard, remove that bird to a separate coop and give a teaspoonful of a mixture composed of equal parts of vinegar and water. Shake well before using. We have cured some very bad cases with only two doses of this preparation.

At this time of the year old hens are apt to be in a pretty fat condition. In some cases they will bag down behind, get weak in the legs, and are not only an eyesore, but are apt to die in this condition unless some relief is given. It is not an easy matter to reduce this surplus fat, but we have found that when such hens are turned out on good grass land, and given nothing to eat during the daytime but what grass they can pluck and bugs they can catch, they will get in better condition. At night we give a handful of wheat to each of them, and that is all the food they get from us each day. But the sooner these over-fat hens get into market the better it will be.

It is not an easy matter to overfatten a hen that is laying steadily, as she will convert the food she gets into the manufacture of eggs, but at this season of the year, when going into molt, and when the eggs come more irregularly, unless care is taken this food will be converted into layers of fat. It will be noticeable, when hens are getting into this condition, that their eggs are of all shapes—double-yolked, small, pigeon-sized, out-of-shape, and with ridges around them. The color of the egg, too, is somewhat different now from what it was earlier in the season. These changes of shapes and color are more or less due to a growth of fat around the ovaries, and the final result will be soft-shelled eggs, and in many cases ending in the egg bursting before it can be laid; such cases generally prove fatal. So the greatest care should be taken that the molting stock is not allowed to become over-fat.

"What changes do you make in the diet during summer, compared with that of winter?" writes a reader of this paper. As such a reply might be of general use, we will answer it here.

We pin our faith to three cereals—corn, wheat and oats, and these we use the year around. These cereals are given in conjunction with their by-products—bran, middlings, cornmeal and ground oats.

During the winter we feed a morning mash composed of equal parts bran, middlings, ground oats and cornmeal, by weight. To this we add fifteen per ct. meat scraps and five per ct. linseed meal.

During the summer this mash is made of two parts bran, one part ground oats, and one part corn-meal, with the same quantity of meat scraps and linseed meal as in the winter mash.

At night, in winter, we give equal parts cracked corn and wheat, and in summer we make it two parts wheat and one part cracked corn.

During the summer, also, the fowls are given all the green food they will eat.

This system of feeding we have followed for years and find it pretty accurately balanced; the fowls never tire of it, and our crop of eggs is always good, considering the season of the year. Our winter egg supply is unusually good, and herein lies the most profits.

Of course we use judgment in feeding. We never overfeed, nor do we underfeed. We do not place our method as a superior one, but it is the best we have tried with the exception of some of the standard of mixed feeds, which containing more of a variety are naturally better, but they cost more originally, and besides are not so readily secured when living some distance from the market.

Overcrowding of the young is as dangerous as overcrowding old stock. If crowded they soon begin nagging each other, and after a bit a small feather is pulled and eaten. Then more are taken, finally producing blood, and when there is a sight of blood, the whole flock is apt to make an attack upon the victim. We have had chicks fairly eaten alive by their own companions. Since we carefully are not having any trouble on that score. guard against overcrowding, keep them from getting too hungry, and do not coop up longer than is actually necessary, we We wish to add that when feather pullers are detected, it is best to remove them from the flock; if this is not convenient, and the chicks are of good size, better kill and eat them.

Give the drinking vessels and feed troughs a good scouring, so that they may not in the least be sour. Keep them out of the rays of the sun, and as soon as the food is eaten, turn over the troughs. This will avoid any possibility of sourness.

If you are using trap nests during this month, it is best to go the rounds every hour—oftener would be better—as the fowls will suffer too much if left confined in these nests for too long a time during the hot period. We make it a rule to dispense with the traps during June, July and August, being content to know which are our best layers during the time of the year when the prices rule the highest.

The molting season is practically here. That is, we find each day more or less feathers strewn around the coops and runs, and the fowls have a rather ragged and unattactive appearance. A falling off of the egg crop is also noticed, although these changes at present are only gradual. Fowls that have passed a year of laying will hardly do any molting before next month, and the still older ones will delay the operations until September. But it is the early molting hen that we can rely upon for good winter egg production.

Linseed meal should now be added to the morning mash—about ten per cent. It greatly assists in molting, and is a most valuable tonic.

At this time, when the price for table eggs is very little above the cost of maintaining the poultry farm, eggs are packed or preserved, and then rushed upon the market in the fall and winter, when there is an advance in price. There should be legislation against this as it is not pure food, and furthermore a fraud is perpetrated inasmuch as these eggs are placed in competition with fresh eggs. It seems strange that people who boast of their honesty and religion do not hesitate a moment to engage in this practise, which to us is a piece of robbery. The press should antagonize rather than encourage it.

This is the season of the year, in sections of the country where the soil is heavy, when many chicks are slaughtered by that fatal disease the gapes. For a number of years there has been a discussion among poultry writers as to the cause of gapes, but we believe that of late years it is a pretty well settled fact that gapes are produced by earth worms to a certain extent. That is, we do not believe that earthworms are the direct cause, but where these worms are in poluted soil—as is the case where the soil is heavy and allowed to become more or less sour or filthy. In South Jersey, where the soil is sandy, there is never a case of gapes reported, which is good evidence that there is something substantial in the claim that the soil is an indirect factor. These earthworms, traveling through an infected soil gather more or less slime which the chick consumes with the worm. A good treatment for gapes is gum camphor. A piece the size of a grain of wheat, forced down the throat of the chick generally cures if taken in time.

Indigestion and lice cause the most of the sickness in the poultry yard. Indigestion is caused by improper food and feeding, and lice by filth and neglect, and so these two troubles are produced by improper feed and care.

There is no better health tonic than comfort. If a fowl is comfortable, she is contented and well, and if her surroundings are clean and agreeable, she will remain in good health

Does It Cost You—

TIME to read through the daily and weekly newspapers, the magazines and reviews, and the special journals that constantly clamor for attention? Can you find time to read enough of them to keep posted even on the important topics of human interest at home and abroad? Does the time demanded by so many periodicals leave you time enough for books?

DOES IT COST YOU—

MONEY to buy even a fairly representative list of papers and magazines? Can you afford to subscribe for as many as would be necessary to give you a complete survey of the world's politics, art, religion, industrial affairs, literature, etc.? Even if you had the time to read them, would you be able to buy several thousand periodicals, domestic and foreign?

DOES IT COST YOU—

WORRY to sift out the conflicting rumors concerning the Japan-Russia war, and to try to follow its progress? Or to get at the true meaning of every great industrial, political, and economic question before the people at the present time? Does it worry or weary you to "keep posted" in this busy, hustling age when there are so few moments for quiet reading and so many demands for your money?

Why Not Take This Tip—

"THE LITERARY DIGEST is a time-saver, a money-saver, and a worry-saver," says Edwin Markham, author of "The Man with the Hoe." It gives you in an hour or two, for only ten cents a week, a complete survey of the world. All the leading dailies, weeklies, monthlies, and quarterlies of America, Europe, Asia, Africa, and Australia contribute their best to its pages. It gives all sides of all questions, and organized information on all topics. At all newsstands, every week, illustrated, ten cents. 616-617

Editorial Gossip

The real profit in keeping hens during the winter months comes from the right prices obtained for firstclass freshlaid eggs. This should be well understood by every one and carefully guarded by all who make a business of producing freshlaid eggs. Much more profit would come to the keepers of hens if they would adopt a plan of guaranteeing the eggs they sell direct to the consumer as being freshlaid eggs, under three days from the hen, rather than look about for egg preservatives that might suspend judgment as to the quality of the eggs, but never keep them as they originally were when fresh.

We note the recommendation of the use of very strong lye for the destruction of henlice in the poultry houses. We have seen this used, and can stand sponsor for the fact that it is very destructive to all kinds of insect vermin; but when a poultry house becomes so thoroughly infested as to demand the necessity of such an application, it should have the most drastic attention immediately. People make this lye themselves through the leaching of wood ashes, the same as would be followed for making liquid lye for soap. Lye in tin boxes can be purchased. One box of this to two boxes of water will thoroughly destroy the lice. The trouble with this, however, is that whenever the lye is spilled upon the floor or roosts, if the feet of the poultry come in contact with same, it is apt to make them very sore.

We have written and rewritten, and written again in the columns of our papers, and the government is spreading free bulletins throughout the United States for the purpose of teaching the people how to grow turkeys. We noticed the other day mention made of one man who had hatched over fifteen hundred turkeys, and failed in the raising of one-tenth of them. Upon inquiry we learned that he turned the turkeys loose, and that their only possible chance for existence was the finding of bugs and grasshoppers. It is quite as impossible for young turkeys to grow in localities that are not provided with a full complement of necessary foods for their existence, as it is for anything else. If the man who lost all these turkeys had shown the least amount of common sense, he would have fed his young poults twice a day at least with a bountiful supply of wheat and cracked corn. On the other hand comes the report from one in the same locality who followed the good, common-sense plan from the teachings mentioned above, and has been rewarded with a flock of fine growing turkeys of about one thousand in number, having lost but very few of all that were hatched. He furnished a plentiful supply of good solid wheat twice a day with a little cracked corn occasionally. Here is a sample from the same locality of the results to be obtained as between good management and care and careless, shiftless methods.

California is becoming one of the banner states for poultry growing, and some one down in Petaluma keeps the papers throughout the country thoroughly well supplied with information. The last reports that almost 90,000 dozen eggs and 900 dozen of poultry were sold from that locality the last week in June. We remember when it was thought that poultry growing could not be made successful on the Pacific coast. The prevalence of roup brought into prominence the homeopathic remedy of *sponge* that had such a run about twenty years ago. Present conditions prove that it is possible through the studying of existing conditions to overcome all drawbacks and make the growing of poultry successful in every locality.

The last available report shows that the value of the eggs from the farms of the United States the past year was something over $580,000,000. If we would divide this by two, and calculate the eggs at fifteen cents a dozen, it would be $290,000,000. If we would add to this the value of the eggs that are cooked in towns and villages and by people that keep poultry not listed upon the farm, we would find that the egg value of the United States the present year would be about $400,000,000. We have always contended that the only livestock product more valuable than the poultry product were dairy products. If one-tenth as much time, money and state department attention was given to the hen by the people and the agricultural departments of the country as is devoted to the dairy, the poultry products would be double what they are at the present time.

State national and local agricultural institutes of every country are turning untold attention towards the production of cheese. The cheese product of the United States would not come anywhere near the value of the poultry product, yet a state organization would refuse an appropriation of a few thousand dollars to the development of poultry interests that would vote lavish amounts to the building of a cheese factory of the state or locality. This may well be blamed on the individuals interested in the poultry products. If there were a national organization of strength and character, supported by local organizations that were true and faithful to themselves and the interests at stake, the poultry business would stand upon a footing well deserved; but as long as there is no concentration of opinion through a properly organized association, the poultry interest will lag along at the tail end of the procession, picking up what they can find and being content with same.

If the poultry fanciers, breeders and raisers of the United States had an association like the Grange throughout the land, there might be something doing in the poultry business, but so long as a few chosen brethren meet in out-of-the-way localities, and spend their time quibbling over the possession of offices and devoting the resources of the association for the benefit of a few, there will never be any great advancement for the poultry fancy; but when there is a popular uprising demand for the rightful and equal recognition of the poultry interests, then the time will come when they will prosper.

We were considerably interested in an article published a short time ago under the heading of "Pay Your Debts." The writer stated that the foundation of the American government had been built upon personal responsibility, and that the continuation of this demand that every man, woman and child in the land made it their special purpose to see that every other man, woman and child met their credit obligations. If it were possible to carry this out to the full intent of the argument, how blissful would be business relations throughout the land. If every one would feel it a moral, legal and personal obligation to meet all obligations, there would be a loosening up of business liquidations that would surprise the world; and it could be done just as well as not.

The value of good quality can not be over-estimated. At the same time, imaginary quality is often over paid. Because a specimen is able to win the highest awards at an exhibition does not prove that it is of a quality to place it way above the average market price, yet a specimen of sterling worth that is able to win several times in keen competition, should be valued at a price that would surprise almost every one. The fact that a fowl has or can win a prize does not carry with it the full assurance of the ability to reproduce even better, but whenever you can gain or secure the combination of proven producers, proven showwinners with strong vitality and endurance, they can not be over valued.

There is a demand throughout the country for more poultry shows. We believe that there should be held as many poultry shows in every state as the poultrymen of that state can actually afford to support; but there should not be a show at any time in any locality that is likely to be a failure. Nothing is more unfortunate or detrimental to the poultry business than poultry shows that prove a financial failure. Anything that will build up and improve the conditions of poultry culture in a locality is beneficial. That which tends to injure or destroy the confidence of the people and consequently the advancement of the interests should be discouraged.

Mr. H. A. Nourse, formerly connected with Fishers Island Farm, and recently associated with the Reliable Poultry Journal, will assume the editorial management of Poultry Herald, of St. Paul, September 1. Mr. Nourse has been very successful in his several positions in the poultry business and we trust that he will outdo himself in his new position. Mr. Rankin moves up into a higher position in the Webb Publishing Co., of which he is a member. This company publishes several papers along agricultural lines in addition to the Poultry Herald.

The same complaint prevails in England as in this country about the decline of the turkey crop. A brisk demand comes from all over the world for stock turkey. We have had some replies for breeding stock referred to us, and think it proper to advise sellers not to kill their chances for more business through too high prices, or by shipping poor stock.

"The White Leghorn fowls are preferred for egg producers in Ireland," so writes Miss White, of Dublin.

Why should you turn the eggs upside down every time you take them from the incubator to air them? The hen only moves them about a little.

Mrs. Sarah Montgomry Crawford, wife of Henry V. Crawford, who is secretary of the New York Poultry and Pigeon Association, died at her home in Newark, N. J., August 1, after a brief illness from a complication of diseases. She was fifty-seven years old. Mrs. Crawford was born in New York City and was a daughter of James Montgomery. Besides her husband she is survived by two children.

A SPECIAL Combination

In order to more thoroughly complete our plans of organization, we have decided to make this Special Combination Offer to all lovers of Poultry and Pigeons of

The Feather and The American Fancier

ONLY ONE DOLLAR for BOTH PAPERS for a WHOLE YEAR

We are positive there never was a better opportunity for securing the Cream of Poultry and Pigeon Literature than is to be found in this combination. You get a paper every week edited and illustrated by the best talent in the country. It is a rare chance, and you can not afford to miss this combination. Send a DOLLAR BILL without delay and have your name on our list. Address,

The HOWARD Pub. Co.
714 Twelfth Street N. W.
WASHINGTON, D. C.

In reply to an inquiry regarding the value of wheat compared with wheat screenings, we will state that as a food sound wheat is preferable and just as cheap. The price of wheat screenings usually indicates the value when compared with the price of wheat. The word "cheap" is such a powerful magnet, especially when it comes to buying feed for hundreds of chickens that the purchaser is apt to be misled and buy a lot of inferior feed. The best is, as a rule, the cheapest, and the best costs the topnotch price. Probably the best advice on this subject is one of the sayings of the German poet Schiller, viz., "Do not buy anything because it is cheap."

Ex-president D. Lincoln Orr of the finance committee of the American Poultry at the Kingston (N. Y.) Show is the week, auditing the accounts of Secretary T. E. Orr, at Beaver, Pa.

Mr. L. P. Clark, superintendent of poultry at the Kingston (N. Y.) show is the manager of the Rosemary Farm, Huntington, L. I. The latter has poultry buildings that are constructed with an eye to beauty as well as for practical convenience. When the plant is completed, it will be one of the finest on Long Island, and there are many fine poultry plants located there. One of the leading varieties bred there is the White Indian Game. Mr. Clark writes that at present he has about one hundred and fifty fine chicks, some very promising for the coming shows. It is his ambition to get the largest and finest flock of White Indians in the world on Rosemary Farm in the future. We are glad to learn all this, for the White Indian is one of the best fowls on earth for utility. As a table fowl it is bound to become a favorite with all who like plenty of meat on breast and back. The few birds of this variety we owned for a brief time some twelve years ago, proved the hens to be good layers in winter. What they could do the year around as layers we could not determine, as all the birds we had were sold to C. A. Sharp & Co., of Lockport, N. Y., who came out strong, in print, the following year and boomed the White Indian Games, especially the majestic strain they bred. Eggs sold at twenty dollars a dozen in those days. Printer's ink and a combination of nerve and shrewd advertising did the trick. Today White Indians are few and far between. The enterprise of Mr. Clark in making another attempt to place this variety before the public is to be highly commended and we hope he will succeed in his efforts beyond his fondest expectations.

A recent letter from our friend, Charles Jehl, ex-secretary of the National Bantam Association, contains some interesting news that will interest readers of The American Fancier. Mr. Jehl informs us that he will give up his Game Bantams and is determined to stick to his first love, Cochin Bantams, and make a specialty of them. He writes: "I have had a very good season, having nearly sixty fine youngsters growing. My sales partly, for which I can thank The American Fancier, until June 1, were in ten (10) states, from New Hampshire to Illinois, and south to the Carolinas. But in June I had my three sales at a greater distance, and I thought The American Fancier might like to hear of them, viz., Tuscon, N. M., Chihuahua, Mexico, and on June 16 I exported per S. S. Luiguana to Palermo, Italy, one pair of Buffs." As Mr. Jehl only started a yearly classified advertisement this season, it proves the value of The American Fancier as an advertising medium, especially where fine stock is sold at good prices. Mr. Jehl, we will add, is the first subscriber to The American Fancier, having sent his dollar one month prior to its first issue in 1893. He has bought a new place at Long Branch and is erecting a modern model bantam house for his pets.

Superintendent Gladney of the poultry department of the big Trenton Fair writes us that the following judges have been selected to place the ribbons: W. B. Atherton, T. F. McGrew, J. D. Nevins, W. Theo. Wittman, Theo. F. Jager, Fred Huyler, F. H. Castner, A. A. Parker, Henry Tieman, F. H. S. Morrison, Wellington Kennedy and George F. Erbe. An A. K. C. dog show will be held in connection with above exposition, which promises to be a great one. The combined departments are expected to excel anything seen in this line in the United States.

The Mahoning & Shenango Valley Poultry Association will hold its first annual show in Youngstown, Ohio, December 6 to 9. Mr. Chas. E. Whatwood is the secretary.

The chicken fancier who always remains at home is apt to become imbued with the idea that his birds and methods are just about right and that all others must be wrong. Travel broadens and association with other fanciers brightens and educates. Many new wrinkles in poultry culture are discovered when on visit to a show or to the yards of a brother fancier. The greatest good, however, in such visits is the discovery that the other fellows has just as good, if not better birds than are in the yards of the visiting fancier. There is no place like a showroom to get acquainted with "the boys" and their exhibits. A real chicken fancier will talk chickens when awake at all times and if he does go to sleep during a chicken show, is apt to dream about them. Mr. George Pan Burgott holds the record as the longdistance talker on chickens. He started at nine in the evening and at four in the morning had put all others to rest. It was all about Brown Leghorns and the last thing George said (and he said to himself) before retiring was: "Guess I have convinced Ed Thompson that correct striping in the hackles and saddles of Brown Leghorns is as fine an art to produce as the barring in his old Rocks." F. B. Zimmer woke up about that time and made some remark regarding the correct color of the back of a Brown Leghorn female which started "Uncle" George Burgott on the war path, and the consequence was both kept up an argument until it was time for breakfast and sleep was banished. But what is sleep compared to a red hot discussion on chickens? The above is not an isolated case; on the contrary it is one of many. The recollection of such sessions is a pleasurable memory for months afterward and the anticipation of another annual good oldfashioned talk is greater than ever.

This reminds us of the fact that the show season begins this month. The Empire State starts off with two big fairs where thousands of chickens will be exhibited, viz., Cortland and Saratoga. This will bring out the first big strings of the season and a line on the quality and quantity will be had. September is unusually prolific in important fairs in New York, New Jersey and New England, and much clashing of dates is noticeable. This will divide the big strings and reduce the number of birds at several shows, unless local exhibitors make up the deficiencies. Unfortunately, however, many local breeders of poultry seem to be afraid to make entries, they being imbued with the idea that the big string fellows are too strong for them. This is a mistaken notion, for in any classes the fresh and wellgroomed birds of a local exhibitor will put to rout the overshown birds of the traveling showman.

Good sales are made at most of the important fall fairs and many a young exhibitor has sold his birds at good prices to men who travel and make a business of showing poultry and pigeons. Now is the time to prepare for the early shows and suitable shipping coops should be purchased at once and birds selected and placed in the training coops. The latter should be large and placed in a cool shed. The best bedding to use is seashells, if they can be procured. Sharp sand or gravel will do nearly as well on the floors. A small fine-tooth rake should be used each morning to gather up the droppings. Feed and water cups should be hung high on inside of front of coops. Wire fronts are the best, especially the Empire Cooping Company's special patented wire front. The birds should be handled frequently and also become accustomed to the stick the trainer and judge uses. This is especially necessary in Games and Game Bantams. A welltrained bird of the latter will respond to handling and to the stick and show up to the best advantage. Hundreds of fine Games and Game Bantams have lost prizes at shows simply because they were an untrained lot of raw recruits. It is impossible for a judge to handle such birds in a satisfactory manner, for they will not show up, and down they go in the list of awards, when with proper handling and training they might have captured the blue ribbon. Leghorns are another breed that require careful handling and training. They are commonly supposed to be very wild birds when

Gallery of Fame

H. H. PARKER

ONLY the artistic hand of an expert could have Parker of Dunellen at his best, as here portrayed. The judge's stick, the bantam, and the pose are all his own, just as we see him every year at the Garden Show. There is but one of his kind; we wish there were more. Long may he be left to look after the interests of the Games and Game Bantams.

confined in a cage, but we have handled a number that were nearly as quiet as that most gentle bird, the Cochin. But a Leghorn is quick to resent hasty and rough handling even when previously well trained. Quiet and gentleness will bring them around as a rule.

Mr. Edgar E. McIntosh superintendent of poultry at the Hope Valley Fair, R. I., sends us an interesting communication regarding the changes made in the classification for poultry and how he went about it and finally succeeded in getting the unsatisfactory competition of "pairs" changed to the proper single bird competition. This communication appears on another page of this issue. In looking over the poultry classification of this fair, we find it excellently arranged and up to date, all birds competing singly except pea fowls, pheasants, swans, turkeys, ducks, geese and pigeons, which are shown in pairs. There is another improvement in the premiums that might well be copied by other societies. The cash prizes on poultry are seventy-five cents and fifty cents, a V. H. C. ribbon being given for third place. In turkeys three dollars is offered to first, and two dollars and one dollar to second and third, respectively. Peafowls, swans, ducks and geese are allotted two dollars and one dollar for first and second. This is a move in the right direction. The prizes offered on these heavy birds are usually too small to pay an exhibitor to ship them to a show. The falling off in Turkeys and geese at our fall shows is due largely to this lack of discrimination. If the express companies would not charge such exorbitant rates, we would, no doubt, see the classes referred to above better filled. About the only turkeys and geese we meet with at most of the large fall fairs are owned by the traveling showmen, who send birds by freight in special cars. They rent a car for so much per week for the season, and usually travel with the birds. This saves considerable money and but little time is lost.

A French writer states: "The best time for breeding is from November to March. It is well understood that the treatment of the birds will vary according to the month in which one finds oneself, and according to the variations of the temperatures in the same month, and from one year to another." This may do in some parts of sunny France and in the southern portions of the United States, but it makes one shiver to even contemplate such a thing up in this section of northern New York. Our French poultryman will find the variation of temperatures during the months he advises hatching, very slight in this section. With zero weather and big fields of snow for four or five months of the year, the hatching of the chickens is a very hazardous undertaking, to say the least. Fastgrowing chickens are always the best and the proper season and environments are absolutely necessary to attain this end.

Dr. A. T. Beckett, the veteran breeder and fancier of Silver Wyandottes is spending his vacation at Atlantic City, N. J. He and Walter Gladney, as well as a few other chicken cranks, are doing stunts by the ocean side and chanting the beautiful sond: "What Are the Wild Waves Saying, Willy?" The doctor's talk is all Silver-laced when the moonlight falls on the water, while Gladney compares the blue of the ocean to his Blue Andalusians. Last year Black Minorca "Joe" Hilldorfer started the natives and the lobsters of the sea by his smoky city bathing suit; this year "Doc" and "Glad" are the peerless Boardwalk "peds." Those two chicken shows held at Atlantic City several years ago have boomed that famous watering place among poultry fanciers as the annual visits of many of the prominent chicken artists prove. We are also in receipt of several excellent photographs of Dr. Beckett, Mr. Gladney and Mr. Hilldorfer, taken at the ocean side. They all indicate that the world has been real good to all three. It is about time to hold another poultry show at Atlantic City.

Dr. A. W. Bell is working hard for specials to be offered at the Canadian National Exhibition to be held at Toronto next September, and the list he has secured thus far is a formidable one. The American Dorking Club has offered a cup, and the American Buff Leghorn, Buff Plymouth Rock, and Buff Wyandotte Clubs are taking the matter into serious consideration. The Houdan Club and Canadian Barred Rock Club have given cups also. The Canadian White Rock, the Canadian White Wyandotte and Canadian Orpington Clubs will donate specials. In addition all the American specialty clubs will give either cash or ribbons, or both. Editor Donovan, of the Canadian Poultry Review, states that the list of specials will take up two pages in the premium list.

Mr. Ross C. Hallock, secretary National White Wyandotte Club, will judge White Wyandottes at the Portland, Oregon, Exposition in October. It is also rumored that he will judge the Whites at New York next winter.

DATES CLAIMED

August 22 to 25, 1905.—Cortland, N. Y. W. J. Greenman, Secretary.

August 22 to 25, 1905.—Wellsville, N. Y. Wellsville Fair and Races. A. S. Stillman, Alfred, N. Y., superintendent of poultry.

August 22 to 25, 1905.—Rockville, Md. Montgomery Fair Association. Calvin Hicks, superintendent of poultry.

August 29 to September 1, 1905.—Ballston Lake, N. Y. Saratoga County Agricultural Society. N. V. Witbeck, Secretary.

August 29 to September 1, 1905.—Hornellsville, N. Y. The Hornellsville Fair and Races. A. S. Stillman, Alfred, N. Y., superintendent of poultry; H. P. Schwab, judge.

September 2 to 9, 1905.—Toronto, Canada. Canadian Exposition. A. W. Bell, Superintendent.

September 4 to 7, 1905.—Johnstown, N. Y. Fulton County Agricultural Society. Drevenstedt and Zimmer, judges.

Sept. 5 to 8, 1905.—Cambridge, N. Y. Andrew Riddell, Supt Poultry.

September 5 to 8, 1905.—Brookville, Pa. H. A. Emmel, Mars, Pa., judge. F. B. Henderson, secretary.

September 11 to 16, 1905.—Syracuse, N. Y. New York State Fair. S. C. Shaver, secretary. J. D. Jacquins, superintendent of poultry.

September 12 to 15, 1905.—Greene, N. Y. Riverside Agricultural Society. C. Winston, secretary. L. J. Hall, supt. poultry.

September 14 to 18, 1905.—Albion, N. Y. Orleans County Agricultural Society. L. H. Beach, secretary; H. P. Schwab, judge.

September 19 to 22, 1905.—Allentown, Pa. The "Great Allentown Fair." Harry Schall, secretary.

Sept. 25 to 29, 1905.—Trenton, N. J. Trenton Inter-State Fair. Walter S. Gladney, Jr., Sec., Atlantic City, N. J.

September 26 to 29, 1905.—Poughkeepsie, N. Y. Dutchess County Agricultural Society. Zimmer and Drevenstedt, judges. J. M. Booth, Secretary.

September 26 to 29, 1905.—Roanoke, Va. The great Roanoke Fair.

October 1 to 7, 1905.—Danbury, Conn. F. Borman, secretary.

Oct. 3 to 6, 1905.—Lynchburg, Va. Frank A. Lovelock, Sec.

October 10 to 13, 1905.—Hagerstown, Md. B. A. Betts, Superintendent.

October 17 to 21, 1905.—Atlanta, Ga. Georgia State Fair and Atlanta Poultry Association. Drevenstedt, judge. Frank Weldon, Secretary.

November 20 to 25, 1905.—Gloversville, N. Y. Fulton County Poultry Society. Stanton, Zimmer and Drevenstedt, judges. Jacob N. Blunck, Secretary.

November 22 to 25, 1905.—Holyoke, Mass. The Holyoke Poultry and Pet Stock Association. Messrs. Felch, Ballon, Shove, Pierce and Crangle, judges. Geo. Barnett, Jr., secretary.

November 25 to December 1, 1905.—Charleston, S. C. The Charleston Poultry Association. E. C. Voigt, superintendent of poultry. Dr. S. T. Lea, T. J. Marshall, judges. F. J. McCarty, secretary.

November 27 to December 2, 1905.—Erie, Pa. Northwestern Pennsylvania Poultry, Pigeon and Pet Stock Association. W. C. Pierce, judge; F. E. Thompson, secretary.

November 29 to 30, 1905.—DeLeon, Tex. R. T. Bowman, secretary. Savage, judge.

November 30 to December 2, 1905.—Danbury, Conn. Nichols, Drevenstedt and Card, judges. C. H. Brundage, Secretary.

December 5 to 8, 1905.—Walden, N. Y. Drevenstedt, judge. H. W. Millspaugh, Secretary.

December 5 to 9, 1905.—Providence, R. I. W. J. Brown, Secretary.

December 5 to 9, 1905.—Wilkesbarre, Pa. D. T. Miller, Secretary.

December 6 to 8, 1905.—Paterson, N. J. Jas. Handford, Secretary.

December 6 to 9, 1905.—Waco, Tex. J. R. Davis, secretary. G. Knebel, judge.

December 6 to 9, 1905. Youngstown, Ohio. Mahoning & Shenango Valley Poultry Association. Chas. E. Watwood, secretary.

December 7 to 9, 1905.—Stewartville, Minn. Stewartville Fanciers Association Poultry Show. George D. Holden, judge.

December 7 to 9, 1905.—Marshall, Tex. K. A. Powers, secretary; Savage, judge.

December 8 to 9, 1905.—Elgin, Tex. A. J. Jarmon, secretary. R. A. Davis, judge.

December 11 to 15, 1905.—Montgomery, Ala. J. L. Hay, secretary.

December 12 to 15, 1905.—Monroe, N. C. Marshall, judge. T. F. Dillon, Secretary.

December 12 to 16, 1905.—Missouri State Poultry Association. H. P. Mason, Fayette, Mo., secretary.

December 13 to 15, 1905.—Kingston, N. Y. Drevenstedt, judge. F. E. Miller, Secretary.

December 13 to 16, 1905.—Blondon, Pa. E. G. Wilkinson, Secretary.

December 13 to 17. 1905.—Corsicana, Tex. C. C. Papsworth, secretary. Davis and Savage, judges.

December 14 to 16, 1905.—Temple, Tex. Mrs. E. W. Mathews, secretary.

December 14 to 16. 1905.—Rutherford, N. J. Rutherford Poultry, Pigeon and Pet Stock Association. E. J. Irwin, secretary.

December 18 to 23, 1905.—Hazleton, Pa. J. E. Anderson, Secretary.

December 18 to 23, 1905.—Concord, N. H. New Hampshire State Poultry Association. H. C. Shaw, Milford, N. H., secretary.

December 19 to 23, 1905.—Cisco, Tex. A. H. Johnson, secretary. Savage, judge.

December 19 to 23, 1905. Concord, N. H. New Hampshire State Poultry Association. H. C. Shaw, Milford, N. H., secretary.

December 19 to 23, 1905.—Atlanta, Ga. H. F. Reils, secretary.

December 19 to 23, 1905.—Mohnsville, Pa. Geo. W. Hatt, secretary.

December 20 to 22, Cleveland, Tenn. A. J. Lawson, secretary.

December 25 to 30, 1905.—Mankato, Minn. Holden, judge. J. W. Kallmann, Secretary.

December 26 to 29, 1905.—Meriden, Conn. Drevenstedt, judge. W. H. Baldwin, Secretary.

December 26 to 29, 1905.—Marietta, Ohio. H. A. Emmel, Mars, Pa., judge. A. I. Spencer, Parkersburg, W. Va., secretary.

December 26 to 30, Aberdeen, Miss. A. Brannin, secretary. S. T. Lea, judge.

December 26 to 31, 1905.—Oregon, Ill. Ogle County Poultry and Pet Stock Association. W. C. Pierce, judge; L. H. Valentine, secretary.

The American Fancier

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

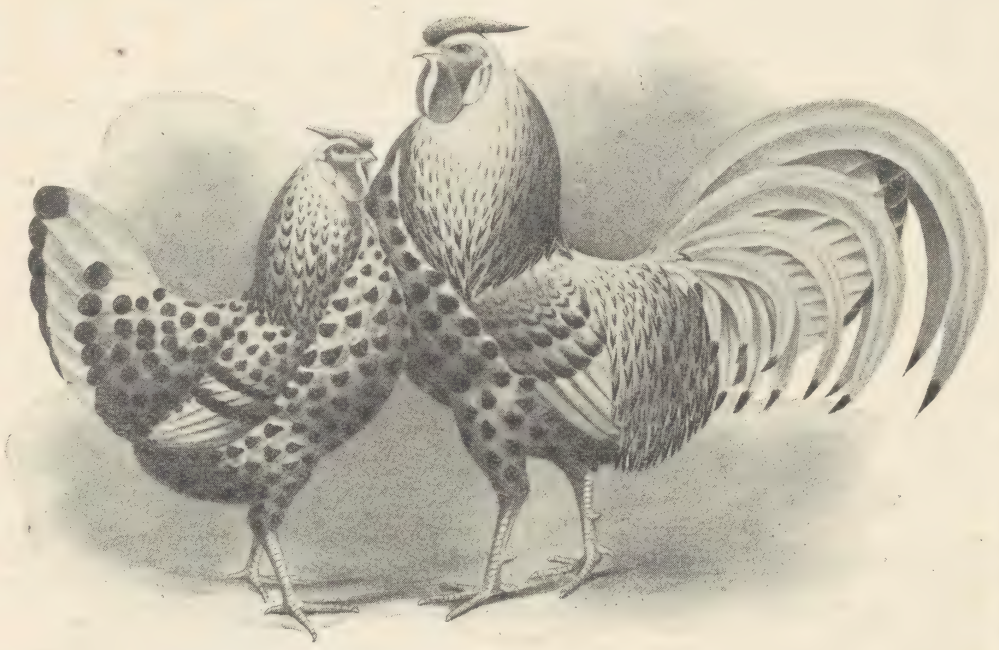
Volume XXIV — Washington, D. C., August 12, 1905 — No. 618

NOTES FROM ENGLAND

By John Wharton

The receipt of The American Fancier for June 24 reminds me that I must pen a few notes on our doings on this side. We are now in the midst of our summer shows.

June 14 found me at the Leicester County Show, which was held this year at Melton Mowbray—famous for its pies. This show may be classed as one of the best in the Kingdom. In the center of an agricultural and in the midst of a famous hunting district it brings together some grand classes of hunters and agricultural horses. The poultry section was fine, for which it is indebted to its worthy secretary, Mr. Ardron, who is a well-known fancier and who does everything in his power to make the show a success. It is a treat to see Mr. Ardron giving out his instructions to his stewards on the show morning. In short, he is a master of the art. The show was well arranged and managed throughout. Never have I seen so many in the luncheon tent and the speeches we listened to were most enthusiastic on agriculture and hunting. It is all very well to talk about hunts being a blessing to a district, but when you get word a couple of days after, as I did, that on one of my farms a fox had killed eight promising Partridge Wyandottes it makes you swear vengeance to foxes and the hunt in general. The poultry section was fine and many well-known winners put in an appearance. The Wyandotte section was the best in the whole show, nineteen Partridge cocks in one class, about the same number of hens and some fifteen chickens of the same variety. Silvers and Golds made four nice classes. Silver Pencilled had one old and one chick class—the former was the best class I ever saw—while some most promising chickens were penned. White Wyandottes were well represented.



The show lasted for two days; the judging was over by 1:30 first day. The prize money was the same as at Otley. A nice gathering of fanciers from all parts of the Kingdom were there. The Partridge Wyandotte Club held a meeting to arrange for the club show in winter. Leeds was settled upon if satisfactory terms could be obtained. A nice batch of twenty-five new members was elected. This makes the club one of the best one variety clubs in England. The secret of this club's success has been threefold. First, a good secretary; second, agreeable members; third, a variety worth pushing.

June 24 found me at Keighley Show. This district is always looked upon as a "Fanciers' Hotbed." Here are some of the oldest fanciers that we have left. If you want to know all about Hamburgs go to Keighley. If you want a cock's or hen's comb put right send it to Keighley. If you want to talk Owl pigeons call up friend John Brayshaw of Keighley.

In the midst of such fanciers we naturally expect a well-managed show and this year was no disappointment. The quality right through was fine. The Wyandotte section was without a doubt the best, but other sections contained some rare specimens. The Hamburgs were fine, but no wonder, when we remember that close to here the "Hamburg King," Harry Pickles, lived and died. Left behind him is his son, Charley, who knows how to put them in the show-pen and here we find several first-prize winners owned by him.

Birkenhead was held in glorious weather and in every way it must be classed as a success. Long may the sun shine on this worthy show. It is not in man's power to command success, but Secretary Edwardson deserves it.

The Royal Show was held at Park Royal, London, from June 27 to 30. The entries in the poultry section were 871, and compared with other years it was an advance. There are two things which tell against this. First, entries are closed too soon; secondly, it is held too long. Many a young bird is ruined by being penned for nearly a week during the hot weather of June—hence many are slow to enter their birds and run the risk. I might also add another reason why entries are kept back and that is owing to judges' names being withheld from the schedule.

SILVER SPANGLED HAMBURGS

As one of the judges I journeyed down to London by the Midland route. It was a beautiful day as I joined the train at Hawes Junction. Soon we were making fifty miles an hour. We soon reached Skipton in Craven, where the haymaking has begun. The crops are light but what there is will be good. Smoky Leeds is our first stop, then away from factory chimneys into the open country; past Chesterfield with its corkscrew church-steeple. We pull up at Sheffield for a few minutes, then on to Trent, where passengers for Nottingham change. As we cross a corner of Bedford we see them busy in the hayfields and crops seem better than up North. We reach London, St. Pancross, in due time. Taking a Paddington 'bus a four-cent ride lands us in the station. Another eight cents books us to Park Royal Station, where we alight about 7 p. m.

I am at once struck with the out-of-the-way place for the show, and the general quietness which reigns. Can the show be a success we ask ourselves and the answer comes—doubtful. We had beds booked at a comfortable hotel close to the main entrance, so we had no trouble on that score. The opening morning broke fine and warm and we soon made our way to the poultry shed, where we found Mr. Sparrow in charge as superintendent. He was most obliging and up-to-date in his management of the whole section. Cochins, Brahmas, Wyandottes, Rocks, Langshans, Orpingtons, Anconas, Andalusians and any other variety fell to my little lot.

Brahmas made two nice classes of old birds but several showed signs of the breeding season and scored badly on that account. The winning cock was a grand color in beautiful feather. Cochins made two fine classes and all colors were represented. A magnificent Buff cock won first, a Partridge second, while a Black took third. In hens first and second went to a pair of Mr. Proctor's grand Buffs. The winner was one of the finest I ever saw and in as good condition as a pullet ready to lay her first egg.

Two classes were given for Cochin or Brahma chickens. The Brahmas took the lion's share of the prizes. Rocks made four good classes, two for old and two for 1905 hatch. The winners stood well out. Many of the chickens were not ready, while some ran to the other extreme and I couldn't help think that they must have shared in the Christmas festivities.

Langshans were poor in numbers. The Wyandottes contained the cream of the fancy. Silver cocks were headed by Mr. Pickle's fine cock, which has perhaps the best breast-lacing ever seen. Had his top color been better he would have been near perfection. Hens were a grand class, the winner being one of the largest and most typical hens I ever saw. Her lacing was fine and her color distinctly black and white.

Gold cocks were headed by Mr. Preston's international winner and followed by several other good birds. Gold hens were not so good, several being in bad order. Silver cockerels poor—very poor. Pullets contained three of the best penned at the Royal. The winner was a treat, not a foul feather in any part.

Gold cockerels were a heavy class but after the winners, which were good, the remainder might be classed as "not ready." Pullets were much better; the winner owned by Mr. Goldsmith was a gem, her lacing being very clear and the black very good. She will be improved by a little attention.

In the any-other Wyandotte cock class a fine White of Mr. Anthony's led the way, followed by the sensational eight hundred and twenty-five-dollar Partridge cock. Hens were fine, and probably the best Partridge hen living won for Mr. Wright who had only just started in the fancy.

Orpingtons made eight grand classes and a look down the classes will quickly show us that Whites are making headway. Mr. Bell, the proprietor of St. Leonards Farm, took the lion's share of prizes, while Cook & Sons, Preston, Richardson and Anthony accounted for most of the remainder, if we except first in Buff pullets, which went to that well-known lady fancier, Miss Garrett. Anconas had two well-filled classes. The winners took their position nicely.

Andalusians were fair in quality but poor in number. It will be a pity to see them in the any-other-variety class, but I am afraid they are booked for that unless their supporters look alive. The any-other-variety classes were interesting. Here we found Spanish, Malays, Hamburgs, Polish, Sumatra Game, Modern Game, Lakenvelders—all there because breeders have refused their support where and when classes have been given. The cock class was led by one of the best Silver-spangled Hamburgs ever seen, so pure is his black and white and his spangles so bold and clear. Hens were led by a fine Spanish, a relic of by-gone days.

We noticed in looking over the show that old English Games, Dorkings, Indian Games, Ducks, Geese, etc., made fine classes, while many classes were given to table poultry. The attendance of fanciers was very poor, only a few putting in an appearance.

Just after judging I ran against Mr. Sewell. It is the first time we have met, but Mr. Sewell's name has been a household one at Honeycotte for many years. How I have admired his drawings, and to meet him was a real joy. We were soon among the birds; his camera was brought into operation so no doubt you will see some of the Royal winners ere long. I am telling no secret when I say Mr. Sewell is having a jolly time. He is coming my way ere long and I hope to

have a pleasant run round North among the fanciers with him.

The first day of the show His Royal Highness, the Prince of Wales, was looking round among the exhibits, while on the second day the show was honored by a visit from the King and Queen Alexandra is a fancier of Banloyal enthusiasm displayed as His Majesty and his illustrious Queen inspected the cattle, sheep, poultry and other exhibits. It may be well to remember that Queen Alexandria is a fancier of Bantams and often visits at the shows.

Taking the show all round it was a grand display, but the attendance was poor—in fact, the worst ever recorded for the Royal.

Too Fat

Obesity is now classed as a disease. The proof of this with poultry is the fact that hens that are too fat do not produce eggs to any extent. The same is true of poultry that is too thin, so we might admit that a hen either too fat or lean is in ill health, and would not be expected to produce eggs. There are many reasons for this. A hen that is too fat has been fed entirely too much carbohydrates or fattening food and too little protein, that is the blood, muscle and egg-forming material. Wherever a hen has reached a state of obesity, fat has been wasted upon her, and the keeper of the fowls has been extravagant; on the other hand when a hen is too thin to produce eggs a crime against nature has been committed by the poultryman, and it is to be regretted that a greater punishment than no profit can not be administered.

Whenever a hen is too poor to produce eggs, she first draws upon the yolk supply started in anticipation of a soon-to-be egg production. This supply of yolks is the result of proper feeding. As soon as the feeding is neglected nature's store is drawn upon, and so long as any of this is left, it would partially supply the demands of nature. Following this the fat and other tissues would be consumed until finally dissolution would follow. The too-fat hen becomes choked up through her entire system, which makes it utterly impossible for her to produce the eggs, and the unnatural surplus of fat-forming foods are laid on internally and externally and between the layers of meat, until she becomes a living article of no use whatever except to be killed and eaten.

The proper feed ration of one of protein to four of fat-forming material will alyays keep the fowls in proper condition, provided they are kept continually at work, winter and summer, digging, hunting and running after this food supply. Without the proper exercise no kind of feeding will produce a profitable egg yield during the winter months. Feed and care is one-half; exercise in hunting for food is the other half of successful poultry keeping.

Eggs for Hatching

Mr. John B. Wilcott, of Plattsburg, N. Y., takes issue with Mr. McAvoy as to the dry-feeding of poultry. Mr. Wilcott states that experience has taught him that all breeding fowls require wet food and green food as well, and seems to think that the dry-feeding method is detrimental to a perfect hatch from the eggs, while the other method is of great benefit to the fertility of the eggs produced.

The advantages to be gained from feeding mash or wet food is that it enables the fowls to digest and assimilate more in the ground foods than they can grind up and use in the whole grain. Mash or mixed food of this kind have a tendency to fatten the poultry. We do not believe that the different methods of feeding either the dry grain or the mash foods will have much, if any, influence upon the fertility of the egg production. When people buy eggs for hatching and have them shipped a distance, they simply join hands with the seller and take the risk for a small sum of money of gaining some fine specimens from the eggs they purchase, or being disappointed. A man with a pen of fowls might place under hens 200 eggs in a season; from these 200 eggs grow 60 chicks, have 40 salable ones and a half dozen fit for the exhibition hall. In other words, out of 200 eggs there is a possible chance of six or more exhibition fowls. Each setting of eggs purchased from this 200 gives a man one chance out of 32 for an exhibition chick. So we scarcely believe that the purchaser of eggs should find serious fault when he does not obtain fine exhibition specimens from all the eggs he purchases.

Odds & Ends

The best club-swinging record has been standing for seventeen years, when three hundred and eighty-six different combinations were shown in sixteen minutes and a quarter, 2,311 revolutions being required.

A score of 6,434 points was the result of a twenty-four hour endurance billiard match in Paris, the contestants covering thirty miles in walking around the table, and a violinist has played a composition of 4,800 notes in four and a quarter minutes, averaging nineteen notes a second.

Reciting Dante's "Divine Comedy" from memory in twenty hours is another queer record, while others have gained fame through making two thousand ham sandwiches in nineteen hours and forty minutes, dressing ten sheep in thirty-three minutes, two hundred chickens in forty-four minutes, and killing and dry picking one hundred and three geese in ten hours.

While Germany has 6,500,000 women who earn their own living, Italy, with only one-half the population, has 5,250,000.

Farmers along the main line of the Pennsylvania railroad have a somewhat unusual complaint. They will probably not bring suit against the company, but they say their hens will not sit, and that the company is to blame. The building of a new freight line is causing all the trouble. A large amount of blasting is being done, and the farmers declare the hens will not remain on the nests while it is in progress. They also say that the shock of the blasts kills the little chicks before they are hatched. There will be few chickens along the main line this spring.

This same complaint was made by the Model Poultry Plant at St. Louis. They could not hatch the eggs in their incubators because of the constant shooting of cannon in the Boer War, just next to and above them on the hill

The larger the comb and the farther from the head or body, the sooner it will freeze.

The larger the comb, the more blood it demands to sustain it and the easier it will be frozen.

When the wattles dangle in the cold water in winter, they soon become frozen.

Brown's Budget

How's your alfalfa crop coming on? Too much rain, eh! Weather prophets that predicted a dry summer because there was so much snow and rain last winter, say the sun spots are to be blamed. It's severe on the chickens, especially on low lands. Unless the coops are kept dry trouble will surely follow. It is a little "trouble" to clean out all the coops late in the afternoon during rainy weather, and then scatter some dry litter, but it will pay to do it.

The Delaware experiment station says about gapes that, "large numbers of chicks can be successfully treated by placing them in a closed box into which is blown a mixture of one ounce of powdered chalk and half an ounce of finely-ground camphor, so that the birds must inhale it." The instructions are not enough in detail. What should be the size of box used for the amount of mixture named and how many chicks will it treat? It would be unwise to leave chicks in a "closed box" very long.

An inquirer wants to know "if Muscovy ducks are profitable?" No. They fly everywhere, are domineering over other poultry, lay few eggs, and can not compete with other ducks for table qualities. Don't waste time raising Muscovy ducks while there are Pekins, Rouens, Aylesburys or Indian Runners, or even common puddle ducks.

Did you ever notice there is only one kind of "luck" in poultry raising and that is "bad luck." The man who makes success prominent is not "lucky," he is credited with the results that effort and intelligence are always sure to bring.

An indispensable poultry yard and house requisite is air-slaked lime. It should always be kept on the premises, and liberal use made of it in yards, runs, houses and coops. A little in the dry dust bath is also beneficial. It purifies the premises, keeps down vermin and prevents disease also.

An authority says about poultry cholera: "A mixture of two drams of pulverized camphor, one dram of pulverized rhubarb and one-half dram of pulverized opium made into sixty pills, one of these administered three times a day, is almost an absolute cure for any case of chicken cholera that can be cured. Best of all is immunity that comes through perfect cleanliness."

Some people buy a sitting of eggs for three dollars and seem to conclude that the purchase entitles them to an endless amount of information afterward. They do not hesitate to call at any time and interrupt when one is exceedingly busy.

A farmer's daughter recently came and purchased a Barred Rock male and said she had much difficulty in raising chickens on account of the rainy season, but that she had been successful with turkeys. She has one hundred and twenty-five turkeys that will make her purse-proud along about Thanksgiving and Christmas holidays. Successful with turkeys and not with chickens on the same farm seems queer.

A good authority concludes that small breeds so long as eggs are sold by the dozen will be more profitable for "market purposes" than the large breeds. This is a mooted question. If general poultry products are to be marketed there are poultrymen who will make more money from some of the large breeds than could be secured from any of the small ones. If eggs alone are meant by the writer no one can dispute the claim. Eggs should be sold by weight. Weigh one dozen Hamburg eggs, and then one dozen Houdan or Black Spanish eggs. It will convert any one to the pound plan, and when the food value of the eggs is considered there can be no further argument.

So far this summer in this state (Maryland) shelter from rain has been more important than shade from the sun for young chicks. The writer recently overheard an old man quoting a saying he declared was in his childhood an "old-time saying:" "A drouth will not bring a famine half as quick as too much rain." A drouth is better for poultry than too much rain, that's certain. Whether it is so about other farm crops I don't know, and, judging by so much of the present season, I don't care to undergo the experience to find out. I am quite sure the night songs of the crickets would be more pleasant for a continuous concert than frogs.

The illustrated Standard will enable the novice to obtain a correct idea of true-bred shape sooner than by comparison or observation at the shows. The illustrations will picture what is ideal in shape—and there are specimens just as perfect in shape as the ideal cuts.

Keep up the incessant warfare against vermin and all conditions that further their propagation. Cleanliness is recognized as the best prevention, yet many advise: "Clean the hen house out once a week"—a one-seventh method only of cleanliness.

A man will make the breed he fancies most the *best* breed—will get more results from it than from any other breed. When a man falls in love with a breed of poultry he experiences the same sensation as a girl does when she falls in love. "It's just the best on earth," and his love for it makes it really true. Of course a man won't do as many silly or real foolish things while caring for his poultry as when he is infatuated with "his" girl. He will, however, be tender and true, and 'twill be love that will lighten the labor of caring for the flock.

Meat is the best sidedish for laying hens.

It is never too early to commence culling out poor quality.

Do not overcrowd brooders, hen with broods of chickens, the roosting box for growing chicks, or the hen house for the old hen. Never crowd poultry of any kind; give them plenty of room.

Charcoal and grit are the poultry's teeth and medicine; the one grinds the food, the other sweetens the crop and the gizzard.

PIGEONS

Hints to Beginners in Squab Raising

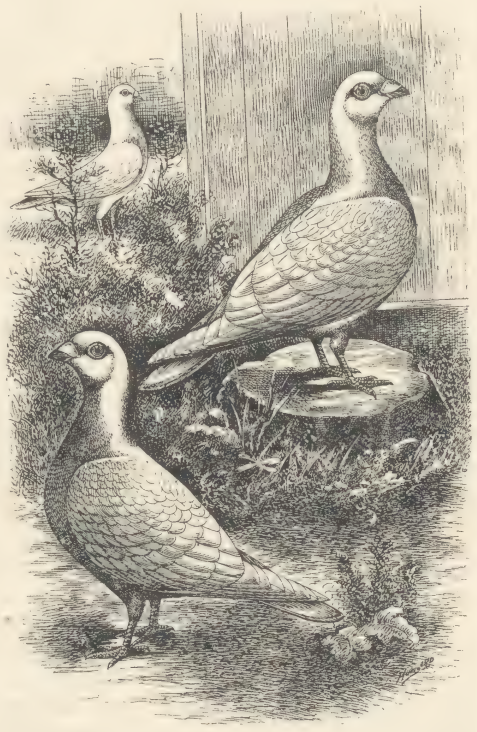
How to make money at home is a question which is agitating the minds of a great many people, especially women. Numerous ways are suggested, but for the amount of capital and labor required I know of nothing equal to squab raising. The market for squabs is sure and steady, and prices such that a good profit can be made even when they are the lowest.

At present the country seems to be full of the pigeon fever, hundreds are going into the business but hundreds will go out again. Those who stick to it are the ones who will make the money.

By some firms who do excessive advertising the business is so highly colored and gilded, that many go into it expecting to make money from only a few pairs from the very beginning. Others anxious to make big money, too impatient to "make haste slowly," by starting with only a few pairs and working into the busines gradually, buy 300 or 400 pairs, knowing nothing about pigeons, how to care for or manage them; their visions of wealth quickly rolling in do not materialize—a large numebr of breeding pigeons is more than they can manage at first; they become bewildered and discouraged and finally sell what has cost them a large sum of money at a great sacrifice.

To be sure in order to have a steady income one must keep 300 or 400 pairs of breeders. Enough must be kept so as to have young in the nests continually. But one writer wisely says, "There is no business so simple that it can be taken up by everybody without knowing anything about it and carried to success. It is always better to go slowly and gain experience through a small beginning."

Had they started with not more than 50 breeders, waited until each pair was settled down, and at work and registered, then bought fifty more pairs, treating them in the same way, and so on, thus growing into the business gradually, they would learn from experience the knowledge necessary to have before they can be successful. Even then they will pass through many very dark places. I did. My pigeons did not all lay "golden eggs." I met with many losses, but learning the causes of my ill luck, I did not become discouraged but kept diligently at work until results are very satisfactory.



A FEW PRECAUTIONS

In the first place I had read that if you did not have a barn, a shed or other place for the pigeons a start could be made in a dry goods box, or a piano box or any old thing. My quarters were not large enough to accommodate the young birds, and I was obliged to feed upon the ground. Be as careful as I might, kernels of grain would lodge where the pigeons found them after they had soured; souring does not take more than a day in warm weather. My young birds would sicken and die; I lost several in this way.

Again, I did not realize how very important it is to keep all unmated cocks or hens out of the breeding quarters. Many pairs of eggs were destroyed and little birds killed by an extra hen or cock being in the breeding pen. It is astonishing how much mischief just one unmated bird will make among the breeders. I have learned also from dear experience how important it is to keep the birds free from insects. Birds should never be put into a new loft without first being treated for insects. Then new birds should never be put among these without being treated. On this acount keep pigeons as far from the poultry as possible.

Not starting my pigeons in permanent quarters, I was obliged to move them when my loft was completed. This broke them up for a long time. It was three months before they settled down to work again. So my advice to all who contemplate going into the business is, get the loft ready before you buy the pigeons. You will get ahead much faster if you put them in permanent quarters from the first.

If one goes into the pigeon business it should be with the determination to succeed. Do not recognize such a word as

WHITE HOMERS

fail. Be thorough and systematic in your work and it will become a daily routine, the business pleasant and remunerative.—Clara Dole.

Many breeders are anxious to experiment with Runts. These are the largest of all pigeons. They are slow workers and do not produce as many pairs of young in a year as do the more active kinds. They are expensive to begin with, and must be carefully handled. Good quality Runt pigeons are worth from $6 to $12 per pair, according to size, age and quality.

Some fanciers recommend crossing Homers with Runts, Homers with Dragoons, and Dragoons with Runts. There are no advantages to be gained through cross breeding. Stick to the true-bred kinds, and introduce new blood frequently for squab growing. The Homing pigeon is the most active and prolific of all kinds that are used for squab growing. If large, strong females at least two years old are selected, you will be able to grow squabs fully as large as the market demands, providing they are properly fed and cared for.

We notice the statement in a paper that seventy-five pair of active breeding Homers. This is a little better than the average pair of squabs in a season. This is about seven pair of squabs to each pair of breeders. Thi is a little better than the average gained, and we scarcely believe that so many pairs kepts one flock would produce five hundred pair in a season.

It takes considerable experience to tell a four or five year old bird from a yearling or a two year old. Even older than this some of them do not show their age. It is equally difficult to tell the males from the females. For this reason, when you have a thoroughly well mated pair, and are sure that they have young that are a credit to them and an advantage to your loft, or a profit when sold as squabs, mark these pairs with bands, so that you can always distinguish them and keep them mated together.

Nothing succeeds like success; success in the poultry business depends upon the

Editorial Gossip

The production of eggs for market has become a profitable business throughout the entire United States. Large flocks of hens, small flocks of hens, and hens kept upon town lots are all being selected for the purpose of producing the largest number of eggs possible to secure from them within the twelve months. Every attention has been paid to the furtherance and improvement of hens for this purpose, and thousands of dollars have been invested in the growing of standard-bred egg-producing hens.

All things considered, there can not be too much praise and honor heaped upon the head of the American fancier who has done so much to the improvement, upbuilding and originating of new breeds and varieties for the benefit of the entire community and the country as well. The fancier produced the breeds and varieties for the purpose intended, then improved, advanced and sold them into the rural districts for the benefit of all. If it was not for the standard-bred quality, the average yield of the hens throughout the country would not exceed 40 or 50 eggs per year, as was formerly understood as the number to be expected from the laying hens.

It is a waste of time and breath for any one to present at this late day any claim whatever for the old style or kind of barnyard hen, or to advance the idea that any hen was worth the keeping for egg production that had not been bred in line from the best of standard-bred stock for the purpose of producing a large number of eggs each year. These are the only kind that have or ever will succeed in producing over a hundred eggs per hen. Thousands, yes, tens of thousands of these have gone beyond the 150-egg limit per year. From such only can a profit be made in the production of eggs for market.

The editor of The Southern Fruit Grower presents a very readable little article on the study of eggs. He refers to the different colors: the dead-white of the Minorcas, the tinted white of the Brown Leghorns, the blue-white of the Hamburgs, the yellow eggs of the American breeds, and the any old color of the barnyard or mixed mongrel fowls. He continues in this article, describing the several kinds of the most popular in the several great centers where eggs are consumed, but over and above all this is a question of color that should be considered; that all who produce poultry for market should do so with the expectation that these fowls will produce good salable eggs for market. Hens that will produce eggs of a regular, fine size, of uniform color, smooth in shell, are the most profitable for the production of eggs for market. In the selecting of hens you will always discover that the oldest breeds, the breeds that have been bred the longest in line, like the Hamburg or the game fowl, will produce more uniform as to size, shape and color than will any of the American breeds that have been recently originated through the intermingling of separate or different kinds of fowls.

These facts should make it absolutely apparent to all that they should continue to breed directly in line from a selected lot of hens and not change or mix in other strains or varieties, for every time you introduce violent changes into your blood lines, you disturb not only the formation of the fowl, but the size, shape, color and texture of shell of the eggs that these fowls will produce. If you will select large-sized hens of any breed or variety that lay large-sized eggs of good shape, form and finish, and will breed continually in line from that lot of hens, you will improve every feature of the egg yield of your fowls. If, however, you neglect this and go haphazard in your matings, you are apt to have irregular shape, irregular color and irregula finish to the shell of the eggs.

The business hen is recognized to-day as the one uniform in size, round and plump in her make-up, a good, active searcher and scratcher for food, a regular egg producer, and one that when she has finished her duties on earth is fine and finished for the market still, where she will present an attractive appearance and bring the highest price from the purchaser. This kind of poultry is now most popular throughout the country.

There is one duty that every poultry raiser in the land owes to the broody hen, and that is careful, kind treatment during the entire season of the year. Every poultryman should have an enclosure covered with grass, into which a broody hen can be gently dropped when she is not needed for hatching. No housing is necessary for her during the period of broodiness. If she is confined in the grass-covered lot where she can have a little food and plenty of water, she will soon forget her broody disposition and return to laying. The treatment of broody hens is oftentimes too cruel for consideration. When they can be cured of the habit so easily as above mentioned, it is inhuman to tie red rags to their tails and let them run themselves to death, or to almost drown them in tubs of water, or shut them up in tight coops where they can scarcely move. Every one should use the grass plot enclosure for the cure of broody hens.

In speaking of the origin of domestic fowls, The Nebraska Farmer goes deep into ancient history of China and the Orient. On one point he is very explicit—that is, when he states that California is almost the same to the Eastern people as a foreign country: the soil, climate, scenery, trees, buildings, people and methods of selling and buying so different that it is natural for the Eastern inhabitant to imagine that he is in a foreign land when he goes there. The poultry cultivation of California is becoming so extensive as to make them almost a locality to themselves. We have been told that one can see more White Leghorns on the square mile of ground near Petaluma than would be found in any other locality in the world.

The next question that will interest the poultry fancier and grower will be the procuring of a good egg yield during the winter months. To insure this see that your poultry is carefully and properly molted during the early fall months. Permit them to have the valuable environment of out-door life as much as possible till the beginning of frosty weather. Let them become rugged and hardened to the climatic changes, even during the night if possible. Feed them first that manner of food that will promote the speedy growth of plumage. After this is done, follow the treatment up with a full ration of egg-producing grains, which they should be allowed to have only after scratching and digging in very deep litter for all the food they get. A full meal of wheat, oats and a little millet seed will produce a great many eggs, if the hens are compelled to scratch and dig continually to get it. The same food, if fed to them in troughs without any exercise or labor to obtain, will produce fat and not eggs. Please remember this distinction, and when you put litter upon the hen-house floor for the hen to scratch in, remember that 18 inches deep will do a lot of good, where 2 or 3 inches will not benefit at all. A plentiful supply of dry litter deep upon the floor is an absolute necessity for a full egg yield in winter.

A farm and livestock journal of Detroit calls attention to the fact that Mr. T. E. Orr, of Beaver, Pa., is a great advocate for the use of alfalfa for laying hens and poultry of all kinds. We knew that Mr. Orr was a great advocate of early-cut, quickly-cured clover hay; the placing of same in sacks and suspending it from the ceiling of his haymow to dry. We know that if he has changed from clover to alfalfa he has learned from experience the increased value of this product over clover hay for the poultry growers.

The Lenawee County Poultry and Pigeon Association will hold a large show the coming winter. The Association was organized about two years ago, and has secured the services of Mr. James A. Tucker to place the awards. Lenawee County is the champion county for poultry in the state of Michigan, and the members of this Association pay special attention to the interests of their brothers in the sale of all poultry products from that locality.

Making and growing capons has become an interesting subject throughout the entire country. Tests are being made to learn the kind of fowl that makes the best capon. Some favor one and some another. In a recent article published the value of the Dark Brahma was strongly advocated. The quality of the capons they make is illustrated by photographs of the full-grown capon alive, and the same bird dressed for market. The writer seems to thoroughly understand the subject, and ably presented the claims of the Dark Brahma. We know that nothing makes better table poultry than the Dark Brahma. Why they have been so neglected of late years, we can not understand, yet it is true, and many people claim that the Light Brahma is the easiest to raise and is the best for market poultry, and have advocated the use of the entire breed for that purpose.

New York City, Chicago, Kansas City, Boston, San Francisco.

Mr. H. V. Crawford, secretary of the New York Poultry and Pigeon Show, writes us that owing to the severe illness of Mrs. Crawford he has been unable to reply to numerous letters sent to him during the past month. He further states that the management of the New York Show did not make an attempt to influence the voting of members of the American Poultry Association in favor of New York, and he deemed it sufficient to extend the invitation to meet at New York. This is characteristic of Mr. Crawford and very much to his credit.

Mr. C. C. Loring, the Sicilian Buttercup fancier of Massachusetts, makes a beautiful plea for Standard Oil and John D. Rockefeller's methods in our esteemed contemporary, The American Stock-keeper, last week. Mr. Loring, we should judge, by his past writings and doings, to be well qualified to defend the Standard Oil "system," but whether he can strike terror in the heart of that doughty warrior and implacable enemy of the Standard Oil trust, Mr. "Tom" Lawson, is a question. As Mr. "Buttercup" Loring, Mr. "Dreamwold" Lawson and Mr. "Standard Oil" Rockefeller are all three quite prominently interested in poultry culture, the outcome of Mr. Loring's defense of Mr. Rockefeller will be watched with interest, especially by those who have had business dealings with both these gentlemen, and there are several in the poultry business to-day who have had. "Birds of a feather flock together" is peculiarly and strongly applicable in the above-mentioned case.

We regret to learn that Mr. Theodore Hewes will not be able to judge at Hagerstown in October, as he must officiate at Portland, Ore., in the capacity of poultry judge, the same week.

To judge by some of the personal letters written by Mr. T. E. Orr, secretary of the American Poultry Association, to friends and members, asking them to vote for Cincinnati, we believe the late Abram S. Hewitt's advice is very timely and should be heeded by Mr. Orr. Mr. Hewitt, when he was mayor of New York City, and he was one of the best the metropolis ever had, in an interview with a reporter of a New York daily remarked: "You can deny verbal statements you may have made with little or no fear of contradiction, but do not write letters. They live after you."

The good and famous old Orange County Fair will be held at Middletown, N. Y., August 15 to 18, just about a month earlier than in past years. The poultry classification and prizes are as liberal as ever, but competition is restricted to exhibitors residing in Orange and adjoining counties. Mr. W. Q. Minturn is again superintendent of the poultry department, and that assures success, while our old friend George E. Howell has been appointed as one of his assistants; another excellent choice. Mr. Howell is a practical poultry breeder and fancier and understands the chicken business most thoroughly.

There has been considerable mortality among late hatched chickens in New England and New York, the cause of which is not clearly known. As one breeder writes: "Lost nearly 40 per ct. They just died, that's all." Last year the same fancier did not lose fifty chickens out of over 900 hatched. The early broods have done well, however, and there will be plenty of good birds at the fall shows. Prices for market chickens are about 20 per ct. higher than last season, the average "springer" of two or less pounds, live weight, selling at 35 cents wholesale in this section.

The National Single-comb Rhode Island Red Club of America has been organized. The secretary, Dr. G. D. Wilcoxon, Freeport, Ill., writes:

"Until the first meeting of the club, which will be held in Cincinnati Jan. 18, 1906, time and place of meeting to be announced later, the following gentlemen have kindly consented to serve: President, C. N. Hansen, Warsaw, Ky.; vice-presidents—F. A. Bennett, Canton, Ill.; J. H. Vallire, Cedar Rapids, Iowa; A. Johnson, Kansas City, Mo.; secretary-treasurer, Dr. G. D. Wilcoxon, Freeport, Ill.; executive committee—Rev. S. R. Cunningham, Oakland, N. J.; F. M. Malone, Cayuga, Ind.; H. C. Kellerman, Kansas City, Mo.; W. J. Hibner, Aurora, Ill.; C. F. Ward, Winter Park, Fla.; W. J. Seely, Castle Dale, Utah; J. L. Probst, Pomeroy, Ohio; C. N. Hansen, Warsaw, Ky.; Dr. G. D. Wilcoxon, Freeport, Ill.; honorary state vice-presidents—J. R. Proyler, West Virginia; C. F. Ward, Florida; H. R. Crane, Illinois; J. C. Hausman, Connecticut; Rev. S. R. Cunningham, New Jersey; Dr. C. E. Hostetter, Ohio; J. R. Williams, Missouri; W. J. Thomas, Alberta, Canada; J. H. Meers, Kentucky; Dr. W. M. Lawrence, Ind.; Prof. L. Sheldahl, Iowa; Dr. Geo. Benton, Michigan; L. C. Duncan, Utah; A. C. Hoyl, Texas; L. S. Harner, Colorado; F. H. Garriesy, Rhode Island; Owen E. Leach, New York, and C. E. Copeland, Wisconsin. At the above meeting the club will not only perfect and make permanent its organization but will also give two prizes to be competed for by members, of a $25 silver cup for the best cock, hen, cockerel and pullet, and a $10 silver cup for the best 12 eggs.

The American Standard of Perfection will be ready for delivery about August 20, and that means it will be in the hands of those who have ordered same before September 1.

The fourth annual exhibition of the Quincy Poultry & Pet Stock Association will be held at Quincy, Mich., December 12 to 15. Mr. Chas. McClave will score the birds.

There has been considerable discussion regarding the hardiness of white breeds of poultry. Poultry papers on both sides of the Atlantic have published columns relating to this subject. The statement made by Mr. Felch years ago that white breeds are inclined to be tender and need bolstering up by out crossing was thoroughly discussed at that time, and now that a similar statement has been started the White Wyandotte fanciers, as well as fanciers of other white varieties, have rushed to the defense of their pets. There is much good in these discussions and considerable free advertising as well. But are white breeds tender? That's the question. Personally, and speaking from long experience, we think white varieties of fowl are just as hardy as their colored and more gaily-befeathered cousins. But there has been much written regarding white animals and their inclination to be less rugged than others of a different hue or color, and a few facts on this subject will prove timely and perhaps convincing.

Take the White Wyandottes. Are they tender? There may be some strains that are, but the fault lies with the ancestral blood and not with color. Some of the strongest, hardiest and best White Wyandottes we ever saw were true sports of the Silver Wyandotte. But they could not be classed as albinos. An albino is a freak, being white all over except the eye, which is of a pale pink color. A White Wyandotte with yellow legs and red or bay eye is a pretty rugged bird when allowed to be such by correct handling winter and summer. A White Georgian Game is tough as a nut and will stand pretty rough handling. White Leghorns are about as hardy a fowl as can be found and rank as the most profitable winter layers in cold northern New York. While Dorkings will stand as much cold and are as full of stamina as the colored and Silver-grey varieties. The Sherwood, a Light Brahma-White Game cross, produced some forty years ago, is a white fowl that for prolific egg-laying and extreme hardiness and stamina, is without a peer. But none of these varieties is an albino in the strict sense of the word.

The late Mr. Lewis F. Allen, one of the greatest and oldest cattle authorities in this country, and who is a close observer of birds and fowls, some years ago wrote: "In estimating the effects of color on the hardiness of animals I have had an experience of nearly seventy years of pretty close observation. The great Snow or White Owl of Northern Canada which sometimes winters in this vicinity, latitude 43 degrees north, is a very hardy bird, showing that its color is not indicative of inability to withstand a rigid winter. White domestic fowls—turkeys, ducks, geese and chickens—are as hardy as darker colored sorts. The same is the case with swine and also neat cattle and horses. The most popular breed of cattle introduced into our country in the earlier years of the nineteenth century—the shorthorns—have

SHARP BUTTERFIELD

NOTHING but a special trip to Windsor could enable our artist to picture Sharp Butterfield as we present him to our readers. Mr. Butterfield is the Poultry King of Canada; no exhibition in the Dominion is complete without his name in the list of judges. He is looked upon with much favor in this land. Besides his ability as a judge, he is credited with having raised some of the best Cochins ever shown.

been bred in England for centuries and have been all colors, from snow-white to deep red; but the prevailing colors have ranged from clear white to red intermixed with roan of lighter and deeper shades called light or red roan, as one or the other hue predominated."

Prof. A. J. Cook is authority for the following: "I think albinoism is really the result of disease, and so albinos are tender and less vigorous than others of the same specie. Unless a white animal is an albino I see no reason why it should not be as rugged as others. Indeed, feeders often say that white cattle feed better than red ones. If this be true, it would argue that they are in better health, as nutrition and vigor usually go together." It will be noticed that Prof. Cook draws the distinction between albinos and white animals.

A new team to take the road this season is that of Parker & Shull, of Johnstown, N. Y. Joe Shull will have charge of it and we hear that he will travel in same car with John Blunck during the fall circuit. The birds sent out by this new firm will be of a very high class and should make fine records at the shows.

There will be a big show at Winsted, Conn., December 19 to 22. P. H. Scudder will judge the Plymouth Rocks, W. R. Graves the Wyandottes and W. H. Card the rest of the classes. The Empire Cooping Company will furnish the coops.

Homer Davenport, the famous cartoonist and fancier of pheasants, has a large and interesting display of his pets at the Lewis and Clark Exposition, Portland, Oregon. The latter state is where Mr. Davenport was born, and he naturally takes great pride in sending the finest feathers from his New Jersey farm to the land of his birth. One of the great features and attractions of the last New York Show was the complete collection of rare pheasants exhibited by Homer Davenport. It proved a drawing card to say the least, and it is just such exhibits that make poultry shows attractive to the public.

Years ago the Madison Square Garden Show, New York, contained a large number of rare varieties of wild water fowl, nicely arranged in the center of the garden with artificial ponds and rock work. If such an exhibit could be secured each year it would prove decidedly interesting, instructive and valuable. With such fanciers of rare waterfowl as Messrs. Davenport, Treadwell and Tilley, within a few hours of New York City, there should be no lack of entries in this department.

The Indian Game, as we have found it, has a frame that is well adapted to carry meat and plenty of it. It is by nature far better entitled to rank as a superior table fowl than some others, and whether we breed Brahmas, Wyandottes, Rocks or Orpingtons, we must acknowledge merit in the Indian Game as far as table qualities are concerned.

Meat is not produced without exercise. This is an old story. The ordinary stall fed hog is a mass of fat, the pastured Berkshire a magnificent carcass of sound meat and fat nicely blended. Reverse the conditions and improvement takes place in the former, and deterioration is apt to rule in the latter. Are fowls not equally affected by similar conditions?

There may be breeds that can never be made really firstclass table fowls, just as there are breeds that will fail to attain the highest excellence as layers. We do not expect the small but milky Jersey cow to make as much or as good beef as the Shorthorn, and we doubt if any method of breeding will bring the Leghorn up to the level of quality our best table varieties enjoy. The quality of the Leghorn is undoubtedly fine, when young, but with age his quality is lost to a certain extent due to the functions which demand the fuel for egg production and not for meat. We think the Leghorn, like the Jersey, has a place to fill in animal economy the same as the Durham and Brahma, but in a different sense.

The state of Colorado, with a fine all-the-year-round climate, with a record annually of 340 days of sunshine, does not produce one-third of the poultry product she consumes. The News says that the casual observer would declare conditions in this state ideal for poultry farming, yet results would seem to indicate otherwise. Poultry farming has not been a signal success in Colorado. The editor further remarks:

"Is there not here a field for investigation by professional poultry farmers, ornithologists, zoologists or whoever may be the proper persons professionally? If the trouble is altitude, then through a proper study of fowls and their habits, coupled with experimentation with the different breeds, a breed, or cross if necessary, ought to be secured through which this difficulty would be overcome."

DATES CLAIMED

August 22 to 25, 1905.—Cortland, N. Y. W. J. Greenman, Secretary.

August 22 to 25, 1905.—Wellsville, N. Y. Wellsville Fair and Races. A. S. Stillman, Alfred, N. Y., superintendent of poultry.

August 22 to 25, 1905.—Rockville, Md. Montgomery Fair Association. Calvin Hicks, superintendent of poultry.

August 29 to September 1, 1905.—Ballston Lake, N. Y. Saratoga County Agricultural Society. N. V. Witbeck, Secretary.

August 29 to September 1, 1905.—Hornellsville, N. Y. The Hornellsville Fair and Races. A. S. Stillman, Alfred, N. Y., superintendent of poultry; H. P. Schwab, judge.

September 2 to 9, 1905.—Toronto, Canada. Canadian Exposition. A. W. Bell, Superintendent.

September 4 to 7, 1905.—Johnstown, N. Y. Fulton County Agricultural Society. Drevenstedt and Zimmer, judges.

Sept. 5 to 8, 1905.—Cambridge, N. Y. Andrew Riddell, Supt Poultry.

September 5 to 8, 1905.—Brookville, Pa. H. A. Emmel, Mars, Pa., judge. F. B. Henderson, secretary.

September 11 to 16, 1905.—Syracuse, N. Y. New York State Fair. S. C. Shaver, secretary. J. D. Jacquins, superintendent of poultry.

September 12 to 15, 1905.—Greene, N. Y. Riverside Agricultural Society. C. Winston, secretary. L. J. Hall, supt. poultry.

September 14 to 18, 1905.—Albion, N. Y. Orleans County Agricultural Society. L. H. Beach, secretary; H. P. Schwab, judge.

September 19 to 22, 1905.—Allentown, Pa. The "Great Allentown Fair." Harry Schall, secretary.

Sept. 25 to 29, 1905.—Trenton, N. J. Trenton Inter-State Fair. Walter S. Gladney, Jr., Sec., Atlantic City, N. J.

September 26 to 29, 1905.—Poughkeepsie, N. Y. Dutchess County Agricultural Society. Zimmer and Drevenstedt, judges. J. M. Booth, Secretary.

September 26 to 29, 1905.—Roanoke, Va. The great Roanoke Fair.

October 1 to 7, 1905.—Danbury, Conn. F. Borman, secretary.

Oct. 3 to 6, 1905.—Lynchburg, Va. Frank A. Lovelock, Sec.

October 10 to 13, 1905.—Hagerstown, Md. B A. Betts, Superintendent.

October 17 to 21, 1905.—Atlanta, Ga. Georgia State Fair and Atlanta Poultry Association. Drevenstedt, judge. Frank Weldon, Secretary.

November 20 to 25, 1905.—Gloversville, N. Y. Fulton County Poultry Society. Stanton, Zimmer and Drevenstedt, judges. Jacob N. Blunck, Secretary.

November 22 to 25, 1905.—Holyoke, Mass. The Holyoke Poultry and Pet Stock Association. Messrs. Felch, Ballon, Shove, Pierce and Crangle, judges. Geo. Barnett, Jr., secretary.

November 25 to December 1, 1905.—Charleston, S. C. The Charleston Poultry Association. E. C. Voigt, superintendent of poultry. Dr. S. T. Lea, T. J. Marshall, judges. F. J. McCarty, secretary.

November 27 to December 2, 1905.—Erie, Pa. Northwestern Pennsylvania Poultry, Pigeon and Pet Stock Association. W. C. Pierce, judge; F. E. Thompson, secretary.

November 29 to 30, 1905.—DeLeon, Tex. R. T. Bowman, secretary. Savage, judge.

November 30 to December 2, 1905.—Danbury, Conn. Nichols, Drevenstedt and Card, judges. C. H. Brundage, Secretary.

December 5 to 8, 1905.—Walden, N. Y. Drevenstedt, judge. H. W. Millspaugh, Secretary.

December 5 to 9, 1905.—Providence, R. I. W. J. Brown, Secretary.

December 5 to 9, 1905.—Wilkesbarre, Pa. D. T. Miller, Secretary.

December 6 to 8, 1905.—Paterson, N. J. Jas. Handford, Secretary.

December 6 to 9, 1905.—Waco, Tex. J. R. Davis, secretary. G. Knebel, judge.

December 6 to 9, 1905. Youngstown, Ohio. Mahoning & Shenango Valley Poultry Association. Chas. E. Watwood, secretary.

December 7 to 9, 1905.—Stewartville, Minn. Stewartville Fanciers Association Poultry Show. George D. Holden, judge.

December 7 to 9, 1905.—Marshall, Tex. K. A. Powers, secretary; Savage, judge.

December 8 to 9, 1905.—Elgin, Tex. A. J. Jarmon, secretary. R. A. Davis, judge.

December 11 to 15, 1905.—Montgomery, Ala. J. L. Hay, secretary.

December 12 to 15, 1905.—Monroe, N. C. Marshall, judge. T. F. Dillon, Secretary.

December 12 to 16, 1905.—Missouri State Poultry Association. H. P. Mason, Fayette, Mo., secretary.

December 13 to 15, 1905.—Kingston, N. Y. Drevenstedt, judge. F. E. Miller, Secretary.

December 13 to 16, 1905.—Blondon, Pa. E. G. Wilkinson, Secretary.

December 13 to 17, 1905.—Corsicana, Tex. C. C. Papsworth, secretary. Davis and Savage, judges.

December 14 to 16, 1905.—Temple, Tex. Mrs. E. W. Mathews, secretary.

December 14 to 16, 1905.—Rutherford, N. J. Rutherford Poultry, Pigeon and Pet Stock Association. E. J. Irwin, secretary.

December 18 to 23, 1905.—Hazleton, Pa. J. E. Anderson, Secretary.

December 18 to 23, 1905.—Concord, N. H. New Hampshire State Poultry Association. H. C. Shaw, Milford, N. H., secretary.

December 19 to 23, 1905.—Cisco, Tex. A. H. Johnson, secretary. Savage, judge.

December 19 to 23, 1905. Concord, N. H. New Hampshire State Poultry Association. H. C. Shaw, Milford, N. H., secretary.

December 19 to 23, 1905.—Atlanta, Ga. H. F. Reils, secretary.

December 19 to 23, 1905.—Mohnsville, Pa. Geo. W. Hatt, secretary.

December 20 to 22, Cleveland, Tenn. A. J. Lawson, secretary.

December 25 to 30, 1905.—Mankato, Minn. Holden, judge. J. W. Kallmann, Secretary.

December 26 to 29, 1905.—Meriden, Conn. Drevenstedt, judge. W. H. Baldwin, Secretary.

December 26 to 29, 1905.—Marietta, Ohio. H. A. Emmel, Mars, Pa., judge. A. I. Spencer, Parkersburg, W. Va., secretary.

December 26 to 30, Aberdeen, Miss. A. Brannin, secretary. S. T. Lea, judge.

December 26 to 31, 1905.—Oregon, Ill. Ogle County Poultry and Pet Stock Association. W. C. Pierce, judge; L. H. Valentine, secretary.

December 27 to 29, 1905.—East Palestine, Ohio. East Palestine, Ohio, Poultry Club. C. F. Early and Phil Feil, judges. Wm. Haught, secretary.

December 27 to January 1, 1905-6.—Tacoma, Wash. Collier and Dixon, judges. Mrs. C. A. Pratt, Secretary.

December 29 to January 1, 1906.—Wallingford, Conn. New Haven County Poultry Association. D. A. Nichols, N. W. Card, judges; Wm. J Hogan, secretary.

December 29 to January 2, 1905-6.—Toronto, Canada. R. Durston, Secretary.

January 1 to 6, 1906.—Nashville, Tenn. Tennessee State Poultry Breeders Association. John A. Murkin, Jr., secretary.

January 2 to 5, 1906.—Waxahachie, Tex. C. T. Spalding, secretary. A. B. Shaner and R. A. Davis, judges.

January 2 to 5, 1906.—Lynn, Mass. J. Fred Watson, W. B. Atherton, D. P. Shove, C. S. Flanders, judges; Chas. E. Hunt, secretary.

January 2 to 6, 1906.—New York. H. V. Crawford, Montclair, N. J., Secretary.

January 3 to 6, 1906. Cambridge, Ohio. Cambridge Fanciers Association. D. J. Lambert, judge. James C. Sarchet, secretary.

January 8 to 12, 1906.—Augusta, Ga. J. W. Killingsworth, Secretary.

January 8 to 14, 1906.—Los Angeles. Mrs. O. K. Burbridge, Secretary.

January 9 to 12, 1906.—Middletown, Conn. W. J. Keift, Secretary.

January 9 to 14, 1906.—Dallas, Texas. Loring Brown, Kunebel and Purdy, judges. ———, secretary.

January 15 to 20, 1906.—Oshkosh, Wis. Wisconsin State Poultry Association. Charles McClave, judge. Frank W. Radford, secretary.

January 15 to 20, 1906.—Delavan, Wis. Southwestern Wisconsin Poultry and Pet Stock Association. Jas. A. Tucker, Thos. F. Bigg, judges; W. E. Piffer, secretary.

January 16 to 20, 1906.—Charlotte N. C. H. P. Schwab, judge. W. B. Alexander, secretary.

January 18 to 22, 1906.—Auburn, N. Y. Auburn Fanciers Association. W. J. Stanton, H. J. Quilhot, Geo. W. Webb, Andrew Riddell, L. M. Hallenbeck, Clarence W. King, judges. Chas. E. Dalton, superintendent. J. H. Scott, secretary.

January 24 to 26, 1906.—Pittsfield, Mass. R. T. Kent, Secretary.

January 29 to February 3, 1906.—Cleveland, Ohio. The Cleveland Fanciers Club Co. F. L. Gruehl, secretary.

January 31 to February 3, 1906.—Hudson, Mich. The Southern Michigan Poultry, Pigeon and Game Fanciers Association. Jas. A. Tucker, J. W. Mulinix and H. A. Boies, judges; H. A. Boies, secretary.

February 19 to 24, 1906.—Pittsburg, Pa. Pittsburg Fanciers Club. Chars. McClave, S. Butterfield, G. O. Brown, judges of poultry. G. T. Erbe, A. J. Edwards, judges of pigeons. G. C. Sutch, secretary.

Poultry and Pigeon Publications

The following list of books have been published with a view of meeting the wants of every Poultry and Pigeon breeder. The authors are well known and popular writers, leaders in their chosen field. Each book is carefully printed and profusely illustrated, and will be mailed post paid to any address on receipt of publisher's price.

DISEASES OF POULTRY. The best book of its kind ever published. It teaches how to prevent and cure all ailments to which poultry are subject. Illustrated. By D. E. Salmon, D. V. M. Price, 50c

THE FEATHER'S UP-TO-DATE POULTRY HOUSE. A book which illustrates and describes how to build a complete poultry house suitable for all climates. Price..... 25c

THE AMERICAN FANCIER'S POULTRY BOOK. Tells of all kinds of poultry, including turkeys and water fowls. Its value can not be overstated. Fully illustrated; in its tenth edition. By Geo. E. Howard. Price..... 50c

PLYMOUTH ROCKS. The book containing valuable information, telling how to mate and grow all varieties of the breed for exhibition. Beautifully illustrated in colors. By T. F. McGrew. Price 50c

WYANDOTTES. The book of books, that teaches how to manage all varieties of this breed for best results. Beautifully illustrated with color plates. By T. F. McGrew. Price 50c

POCKET MONEY POULTRY. An interesting story of how to get a living from poultry. It tells when to begin and how to win. By Myra V. Noyes. Price, 50c

THE EGG QUESTION SOLVED. Tells just how to have plenty of fresh laid eggs all the year around. One of the very latest books out. By T. F. McGrew. Price..... 25c

HOW TO GROW CHICKS. The book that almost guarantees success in the hatching and rearing of chicks. Illustrated. By T. F. McGrew. Price, 25c

THE HOMING PIGEON. How to grow, train and fly the feathered Racer, also how to select them for exhibition. Illustrated. Price..... 25c

THE FEATHER'S PRACTICAL PIGEON BOOK. Beautifully and profusely illustrated. No other book of the kind equals it. By J. C. Long. Price, 50c

MONEY IN SQUABS. The original and most complete of all the books on squab growing. It is the best of them all. Illustrated. By J. C. Long and G. H. Briton. Price..... 50c

THE FEATHER'S PRACTICAL SQUAB BOOK. The very latest on the subject, by a practical and successful grower. Illustrated. By W. E. Rice. Price 50c

THE FEATHER. A monthly publication on poultry and pigeons. It contains all that can be said by the most competent writers. Beautifully illustrated. Yearly subscription 50c

THE AMERICAN FANCIER. America's only journal devoted to poultry and pigeons that is published weekly. You should have the latest news each week. Per year $1.00

HOWARD PUBLISHING CO.

The American Fancier

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV — Washington, D. C., August 19, 1905 — No. 619

Partridge Wyandotte Color

I read with more than passing interest the article in The American Fancier of the issue of May 13, under the heading of Partridge Wyandotte Color.

Ordinarily I do not dispute or attempt to correct the views of those who write articles in reference to this particular breed, which appear from time to time in the different poultry journals, but as there are statements in the article in question relating to the color of Partridge Wyandottes which are so far from actual facts, and fail to portray existing conditions that I feel it my duty in justice to the many breeders of this variety, to state in The Fancier the views of some of our breeders who have made this breed a special study and have met with considerable success.

I do not question but what the article was written with the best of intentions, especially that portion of it relating to the mating of this variety, but it seems to me the writer must have been inspired more by imagination than from facts gained by actual experience, unless his experience in breeding has differed greatly from mine.

In regard to the color as called for by the Standard I fail to see any good reason why it should be materially altered, or by altering it how we could add to the beauty of the breed. I personally know the present requirements to be in harmony and in accord with the ideas of the majority of the experienced breeders of this variety, with whom I have come in contact or corresponded, as to what an ideal specimen should be, and I fail to see wherein by altering the Standard color to fit the ideas advanced by Mr. Ingalls it would make it any easier for him or inexperienced breeders to raise prize-winning specimens.

He says he finds breeders who have been breeding them two or three years giving them up because they can not get the proper color and markings. Allowing that to be so; to every breeder who has given them up I will venture to say that during the same period of time three new ones have started in breeding them, and the large increase in the number of entries at the different shows each season, and the amount of business the leading breeders of this variety have done the past year is ample proof of this assertion.

In the hands of experienced breeders I know of no other variety of party-colored fowl that are easier to raise to Standard requirements, or that will produce a greater percentage of good specimens than the Partridge Wyandottes.

Now in regard to those who have given up breeding them; would they have made a pronounced sucess of breeding any other variety? I think not, and for that matter what percentage of the total number of persons who start to breed any kind of poultry to Standard requirements make a success of it? I certainly believe there is a smaller percentage of failures among those who start to breed Partridge Wyandottes than there are among those who start in with some of the *older breeds;* for the reason that they have for competitors at every show, breeders who have bred that particular variety continuously for the past ten to thirty years and who have a knowledge of the breed that can only be gained by experience, and no breeder should expect to gain a thorough knowledge of breeding Partridge Wyandottes in less than three years, to say nothing of giving them up before gaining that experience.

We also have a class of fanciers who are always looking for something cheap; who buy eggs and stock of the *breeder* who will furnish the greatest number of each for the least money (irrespective of the known breeding qualities of the stock which the eggs came from or of the stock purchased), and who have visions of being able to raise from such in the near future exhibition specimens to sell to *others* at from $10 to $100 each. While I know some of this class to profit by past experience and eventually make successful breeders, the majority fail.

Mr. Ingalls says that our Standard demands a male bird so dark that a few feet away it could be mistaken for a blackbird, and that the blue ribbons at the shows go to such birds. Such a statement is an exaggeration of the truth and our Standard calls for no such colored specimens, but it does call for a good, bright, reddish-colored hackle and saddle feathers distinctly striped with a good metallic black. The back should be of a good, bright red color although darker than either hackle and saddle and the reddish-colored portion of the wing should be exceptionally bright. and such a bird should never present any such appearance as he states.

I attended many of the largest shows held last season, and in no instance did I see a specimen that looked like a blackbird awarded a blue ribbon, and the majority of males exhibited were lighter colored than they should have been, some of them having hackles and saddles of an orange-lemon color (substantially the color required by the English Standard).

There has been a wider range of color among the males exhibited than the females, but in only one instance last season did I see a prize awarded a male that would anywhere near meet the description of color as indicated by Mr. Ingalls, and that was to a fifth-prize cockerel, but as the judge awarded the blue ribbon to the third best cock in the show for reason of lack of knowledge of this breed, it was not surprising under the circumstances that the fifth prize should have gone to the credit of such a dark specimen even when there were two better ones upon each side of it unplaced.

The annual exhibits of the Partridge Wyandotte Club of America bring out the best and largest exhibits of this variety of the season, and for the past two years they have been judged by club judges, who have made their awards according to Standard requirements and in a manner which has been very satisfactory to the exhibitors as a whole.

Mr. Ingalls says that the female, to be pretty, needs a rich, bright and glossy-appearing color, and that the most of the dark females are dead in color. This latter statement surprises me more than anything else he has said, for it is the dark females which, as a rule, show the greatest amount of sheen or gloss to their plumage as well as the best penciling, and if properly bred will show a contrast between the ground color and penciling full as far away as the lighter-colored specimens; and it is the medium-dark, rich-colored birds which we strive to breed, for the reason they will hold the brightness of their plumage even in old age.

While no doubt there are many females bred too dark in color, it is equally true there are many of them too light—much lighter than the average Partridge Cochin, and I do not think for a moment that many breeders will dispute but what they should be bred as dark at least as Partridge Cochins.

I had in my yards until recently a female of this variety seven years old, and, notwithstanding her age, she was an excellent show bird, and for color and markings was the equal of our best Partridge Cochins, and she had that rich red-colored edging to her hackle we so much admire, and which is further evidence that we have not wandered very far away from what, a few years back, was then considered an excellent specimen, and if we will look back to the colored plates of the birds which belonged to Ezra Cornell (of the original Cornell Blackenburg strain) we will find shown in the illustrations that reddish color upon the hackle feathers, or if we will look back to some of the birds raised in years past by Mr. Thiem (originator of the Western strain) we will find them even richer in color than the Cornell illustrations show.

Partridge Wyandottes are an American breed and one of the most beautiful in existence, and have practically no superiors either for utility or show purposes, and at the present time are making remarkable headway in this country.

In regard to Partridge Wyandottes abroad: if I am rightly informed the first ones were purchased in this country and introduced into England by Mr. John Wharton, the present president of the Partridge Wyandotte Club of England, a judge of poultry and a successful breeder of Partridge and Silver-penciled Wyandottes. Although they gained very slowly at first to-day they are the most popular breed in that country. The Partridge Wyandotte Standard in England is materially different from ours at the present time as to color, our best specimens being too dark in color to meet their requirements and their best specimens being equally useless to us. We have practically followed our Partridge Cochin Standard for color here, and they their Partridge Cochin Standard there.

While our Standard calls for an even-colored hackle throughout its entire length of a reddish color, the English Standard calls for an orange-lemon-colored hackle, which is of the darkest color near the head, gradually fading in color until it reaches the cape, at which point it is lemon or straw colored. While we occassionally see a male in the showroom with a hackle that will meet the above description, such birds to my mind have a faded-out appearance and are distasteful to our best breeders of this variety. Under a score-card such specimens should be severely cut for color.

I have seen quite a few Partridge Wyandottes that were bred in England, and among them were some extra-well-penciled females. I also have some sample feathers which were sent me from England taken from a standard-colored female, the ground color being substantially clay color, but they have not the brightness of plumage as those taken from a bird bred to our Standard requirements.

There is no doubt but what many of our breeders of this variety would be willing to breed our birds a little lighter in color if by so doing it would result in the making of an *universal standard* for this breed, but it would also be necessary for our English cousins to breed their birds a few shades darker than at present should they desire to help bring such a condition about, and would it be expecting too much of them to do this, considering this to be an American breed, and it has been they who departed from the Standard made here for it.

Whatever the color required by the Standard it is the duty of the officers and judges of the Partridge Wyandotte Club to exert their influence to have awards made strictly in acordance with its requirements, and breeders will do well to make a study of the Standard, and determine what that color really is, and breed and exhibit accordingly.

The awards of some who profess to be judges are not always correct. I asked a judge at a certain show last winter why he placed an award upon a male bird which was particularly light in color (there being others on exhibition its equal in every other respect). He led me around to a coop containing a Partridge Cochin male (which happened to be a number of shades lighter in hackle and saddle than the Standard for that breed calls for), and then stated that he had made his award in accordance with the color of the Cochin, he evidently having forgotten that we had a Standard as a guide by which to judge either breed. If the wording of the present Standard is so vague that some of our judges can not understand it, and for that reason judge without it, let us hope that the language of the new Standard (when we get it) will be clothed in such terms that all may understand its requirements.

Mr. Ingalls says that Partridge Wyandottes worth having can not be raised by the single-mating system. Many of our oldest breeders of this variety claim that nearly all of their prize-winners in the past have been bred by the single-mating system, and some of the very best specimens exhibited last season I personally know to have been produced that way. English breeders, I am informed, practise double mating almost exclusively. Personally I practise both systems, but it is my belief that the average new beginner can make greater progress at the start by double mating, but in either case he must study his own birds, note their defects and mate them in a manner to bring out the best that is in them.

Mr. Ingalls also says that this breed started off with a rush, but it is doubtful if it is holding its own. I believe they

have made the greatest gain the past six months of any year since having been admitted to the Standard, and know of no other breed that is gaining faster.

We shall see larger entries at the shows next fall and winter than ever before and the chances are that many blue ribbons will be awarded to the birds of comparatively new breeders of this variety.—J. B. Hadaway, President Partridge Wyandotte Club of America.

ODDS & ENDS

Mr. F. C. Betts, treasurer of the Prairie State Incubator Company, spent part of the afternoon Monday in our office. Mr. Betts states that he has met with unexpected success in his trip throughout the country since he left the meeting of the incubator manufacturers at Indianapolis.

Mr. J. A. Clark, librarian of the U. S. Department of Agriculture, would be obliged if some of the readers of this paper would send him the following numbers: 1903, vol. 20, No. 503; 1904, vol. 21, No. 545. If one of the readers can supply these to the librarian it will be a gracious act.

The sixth annual exhibition of the Fanciers Association of Indiana will be held in Tomlinson Hall, Indianapolis, February 4 to 10. Well-selected and learned judges have been named. A display of dogs and cats will be added to this attractive annual show. Address all communications to E. A. Pierce, secretary, Indianapolis, Ind.

The Fanciers in and about Youngstown, Ohio, will hold a poultry exhibition December 6 next. This is a new association and deserves the support of all the Ohio fanciers. Best interest comes to the fanciers through the good management and success of a new poultry exhibition. We should like to have their neighbors do the best they can to help them.

We have a very interesting letter from Mr. Samuel J. Kurtz, Sanatoga, Pa., in which he tells us that the Sanatoga and Schuylkill Valley Poultry Association had its twelfth annual election of officers. Mr. Kurtz was elected financial secretary. Their next show will be held November 29 to December 2, to be judged by comparison.

We are in receipt of a letter from Mr. W. R. Hinz, Cleveland, Ohio, in which he states that the Fanciers Club of Cleveland have arranged to give a show the week of January 29. The Cleveland boys give a good show when they take it in their hands and we wish them success. Put in show dates.

1. In the Shade. 2. On the Blue. 3. Perfectly Happy. 4. Cooling Off.

THE INCUBATOR MANUFACTURERS AND MEMBERS OF POULTRY PRESS ASSOCIATION AT BROAD RIPPLE

During the meeting of the incubator manufacturers and the National Press Association, at Indianapolis, the members present were entertained at Broad Ripple by Messrs. Hughes and Pierce. The above speaks louder than words the delightful time that these people had during their stay by the waterside.

Egg Tests

A good egg will sink in water.

Stale eggs are glassy and smooth of shell.

A fresh egg has a lime-like surface to its shell.

The boiled eggs which adhere to the shell are fresh laid.

Eggs packed in bran for a long time smell and taste musty.

After an egg has laid a day or more the shell comes off easily when boiled.

Thin shells are caused by a lack of gravel, etc., among laying hens.

A boiled egg which is done will dry quickly on the shell when taken from the kettle.

Eggs which have been packed in lime look stained and show the action of the lime on the surface.

If an egg is clean and golden in appearance when held to the light it is good; if dark or spotted it is bad.

The badness of an egg can sometimes be told by shaking near the holder's ear, but the test is a dangerous one.

With the aid of the hands, a piece of paper rolled in funnel shape and held towards the light, the human eye can look through an egg, shell and all.—Exchange.

The judges at the Central Canada Exhibition, Ottawa, Sptember 8 to 16, are: H. B. May, Natick, Mass, and Newton Cosh, Port Dover, Ontario. C. F. Wagner, of Toronto, will judge the pigeons. The Ottawa Poultry Association has donated a large number of sterling silver spoons as pecial prizes.

When the hens commence to "gobble" all the food from their broods, refusing to "call" the chicks, it is time to wean the chicks. Some hens will do this for a long time, and careless people will not notice the chicks are not getting a proper allowance of food—for they are actually afraid to come near the mother hen to eat. Watch the brood hens closely, and when any of them commence such unmotherly actions, put them back with the flock, for the chicks will thrive better without them.

PIGEONS

Marking the Pigeons

The American Pigeon Association furnishes to its members what is known as a sealed or closed band for marking pigeons that are intended for the exhibition. These are small, round, seamless bands that are slipped over the foot of the pigeon on to the shank just at the time when the foot is of the size that it can be slipped through the band with a little care. At this time the foot is large enough to hold the band from losing off, and it can never be removed from the shank of the pigeon, and the number and the year record marks it forever. In marking Homer pigeons in flight they use names or number stamps. These brands are stamped on the flight, secondary or tail feathers of the bird as the owner may select. After the birds have a full wing and tail, and these markings are stamped thereon, they will last for the entire season. These names, numbers or brands are recorded with the secretaries of the Pigeon Flying Association, and it is the habit of people throughout the country, whenever they find a pigeon that is marked in this way, to take care of it and report it through the journals that keep record of such things.

Those who wish to use private markings for their pigeons can buy leg bands, the same as are used upon poultry. These bands are of several kinds, and are usually sold by the poultry supply houses throughout the country, or advertised by the manufacturers through the columns of poultry and pigeon publications. These are the different ways of marking and banding pigeons. Some of the show associations do not permit any bands upon the shanks of the pigeons shown other than the seamless bands of the Pigeon Association, which has no mark upon it that would tell anyone to whom the pigeon belongs, the only record of this band being in the possession of the secretary of the association and the owner of the pigeon.

Questions of Color

We have several communications from our subscribers about breeding for color in poultry. We have decided to answer all these under the above caption. One person asks: "What colors can I mate together to bring a red or yellow color?" Both of these are established colors in pigeons and poultry, and the best way to get them is to breed direct from one or the other as desired. Those who breed reds and yellows—solid colors—in any kind of pigeons may get both by breeding one red and one yellow together. Some matings of this kind will produce one red and one yellow in the same nest, others will produce two of the one color or the other. We would not know how to mix up colors to produce either color that would successfully reproduce of their kind.

In the breeding of pigeons or stock of any kind for the exhibition pen, it is possible to inbreed without bad results for several years, providing that the strongest and most vigorous offsprings are selected each time for cross-mating. This can be carried on a number of years, if you avoid mating full brothers and sisters together. Nothing seems to have as bad results as the continual mating of full brothers and sisters.

A pair of pigeons that have been mated for a considerable time, then exported for a month or six weeks and mated with other specimens will go on producing true to the blood and color as if mated without reference to any former influence. This subject of previous influence has been so thoroughly tested and so positively proven not to be true that it is scarcely worth while even to think of it any more.

Yes, you are almost sure to have crested fantails from a pair in which one is smooth head and the other crested. Where they are mated in this way it destroys the ability of all the offspring to produce true to their kind. This peculiarity is apt to crop out at any time where the blood influence is installed in the young pigeons.

We have a letter from one of our subscribers asking us to please tell something about the English Stubbs. Will some of our readers who are familiar with this variety of pigeons please describe them for publication in the columns of this paper? The one who makes the inquiry will please watch the columns of our paper for an answer.

We notice in a periodical issued from San Francisco the following about turkeys. It states that in Corning and Tehama counties, California, there are several flocks of turkeys numbering as many as three thousand each; also that these sections are the most successful for turkey growing in the State, and that last year, just before Thanksgiving, a single shipment of fifty-eight thousand pounds was put on the cars at Corning. This was about ten thousand dollars worth of turkeys in one load. It is further stated that turkeys are bought in flocks like sheep and are shipped alive to San Francisco for the holiday market. The practice of shipping alive has largely ceased, the growers becoming aware of the fact that they save loss of weight and gain more in value in the turkeys when dressed to ship. The same article records that the raising of geese and squabs is becoming very popular in many localities of California. Continued good weather, but little cold weather, and in winter cool but not cold rains, make it possible to raise large numbers of geese and ducks with but very little protection from the weather, and the cultivation of squabs has always been a profitable business in that section of the country.

Have your pigeons so tame they will not jump off the nest every time you go near them. Encourage your birds to be quiet on the nest by going about them often but very quietly. Encourage the young parent birds to feed their young by throwing corn on the floor once or twice a day to induce them to eat. For every time they eat they are apt to feed their young.

Editorial Gossip

We have several communications requesting that we pay some special attention to the care of poultry in molting, and of pigeons as well. We have mentioned these conditions several times of late, but do not seem to have made this important period in the life of poultry and pigeons as prominent as we might have done.

The molting or casting of plumage throughout the entire feathered tribe is a natural condition through which they all pass prior to the approach of winter each year. Nature wills it that they shed their entire plumage each fall, and renew the same with new, fresh feathers so that they may be better and more beautifully clad than they could possibly be if they continued to wear the same coat of feathers year after year.

The fowls of the air that live in natural conditions drop their feathers more naturally and more regularly than do the domestic poultry kept in a less natural condition. Poultry kept in confined yards or runways ofttimes are very dilatory in their molt. This same condition seems to go with poultry carelessly or improperly cared for where full range is allowed them. Naturally, all our domestic poultry should begin their molt early in the fall, and have an entire change of plumage prior to the coming of winter's frost. The facts are, however, that the period of molt extends over the space of time beginning about the middle or the end of August up into December. Fowls in the best of health may possibly finish their molt in thirty days, while others oftentimes extend into ninety or one hundred days to complete the casting off and recovering of an entire new coat of feathers.

Fowls that have a comfortable range that is properly shaded, that are provided with an assorted grain diet, plenty of green food and fresh water need no further attention, provided the houses they dwell in are clean and comfortable. There is, however, an earnest demand for information as to the best method of handling the poultry to quicken the molt, and to strengthen their health and vigor as they pass through same. It has been noticed that hens that become broody in August and are permitted to sit upon the nest for a week or ten days on short rations and then removed from the nest and placed in an open lot on increased diet cast their feathers very quickly and regain a new coat. In compliance with this, the partial starvation plan in close confinement has been practised on the non-setting varieties and others as well. People who desire to hasten the moult, shut up their hens in the hen-house from seven to twenty days according to the necessities of the conditions that exist. The poultry houses being close and hot during the months of August, are somewhat like the conditions of the sitting hen upon the nest. Hens kept in confinement in this way are fed just about enough to keep them healthy and alive, and during the seven to twenty days' confinement in the heated hen-house, they pass through somewhat the same feverish condition that would be created on the nest hatching a clutch of eggs. When hens begin to show a tendency to lose their feathers they are turned out on a free range and fed plentifully of good, substantial food, hen-houses thoroughly cleaned and the quarters made more comfortable for them. When carefully watched and handled, this method can be very successful; when carelessly or improperly managed, injury may be done the poultry. To succeed, they must have a free grass range when turned loose, with plenty of good, sound, wholesome food in addition to plenty of green food and other foods that may be picked up in running about on the free range. This same treatment of the poultry in close quarters would not succeed near so well.

To molt poultry that are kept in small runs or yards, the treatment should be different. Thoroughly cleanse and darken the poultry house, cover the floor of same deep with dry earth, straw and chaff, confine your poultry within the house, feed lightly of wheat and hulled oats, all of which should be thrown into the litter and the fowls compelled to dig and hunt continually for same. While the poultry is confined in the house, if the runways are bare of grass, dig them up thoroughly with a mixture of wheat screenings, millet and oats, rake this thoroughly in and allow to grow and freshen the soil. Confine the hens or poultry to this darkened house for at least three weeks. At the expiration of this time the feathers should begin to loosen and fall. So soon as this begins, allow the poultry the freedom of their runways every evening about sundown. Do not let them suffer from the heated rays of the sun during the period of molt, keeping them within the darkened house during the daytime, allowing them to run about in the yard about sundown at night. This treatment has been successful and prevents the possibility of sunburned backs and sun-scorched plumage. Another method that may be applied to exhibition poultry: in addition to confining them to the darkened houses under the same treatment as described above, you may safely take the best quality specimens that you would have properly molted for early shows, and wash them in very warm water, the same as you would wash them for an exhibition, only using water as warm as you can stand with your hands. Wash them thoroughly in this, rinse the soap from the feathers in water equally warm. Do not plunge them into the cold bath at all. Permit them to dry out in the warm sun, then keep them confined as above described. At times it is necessary to wash them twice or even three times in this way. When the feathers begin to drop from such treatment they come very fast, and the fowls should be sheltered continually from the direct rays of the sun, else their backs become scorched and the feathers destroyed for exhibition purposes.

Poultry in molt should have as their grain food good, sound wheat, hulled oats and some cracked corn, with about half an ounce of animal food daily. Fowls with dark plumage may be fed during the molt with a little flaxseed, some red carbonate of iron in the food and a few sunflower seed to richen the luster of the plumage and hasten the molt. No one of these should be fed to the fowls that have white or very light colored plumage. White fowls in molt should be fed hulled oats, some wheat and corn—better if this corn is cracked and the heart taken out—plenty of green food, and a half ounce of meat diet. Yellow corn, iron, flaxseed and sunflower seed, as well, have a tendency to detract from the purity of plumage of a white fowl during molt.

Better late than never Mr. Curtis. Your labors on the new Standard have evidently opened your eyes to the continued hardships to be overcome in the life of the "poultry judge." Now do penance and lend your aid to the much-needed changes along these lines.

The Rocky Mountain News, of Denver, Colorado, has been devoting some of its editorial space to "The Noble Hen" and gives some significant figures regarding the Colorado hens and their reluctance to lay as well as the biddies in the neighboring states of Kansas and Nebraska. It remarks:

"When the State Agricultural College can find the time, we want it to exploit the possibilities of the hen in Colorado. We refer, of course, to the domestic, homestaying hen. For poultry and poultry products furnished by outside states, mainly Nebraska and Kansas, Colorado paid out in the vicinity of $5,000,000 last year, one-half of which went from the Denver houses engaged in this trade. We have peculiar climatic conditions, and it is a pioneer legend that our radio-active altitude is not favorable to women, cows, cats and hens. The women, cows and cats have survived the legend—why not the hens?"

That the experiment stations in the West can aid the poultry raisers in Colorado, there is not the slightest doubt, provided enough interest it taken in the hen to warrant thorough trials in feeding experiments conducted over a series of years in the sections of Colorado best adapted to poultry farming. The writer of these notes spent the winter of 1879 in Colorado, but the hen business at that time was in its infancy. Whether the altitude has any effect on the "lay of the hen" is not known with any degree of certainty. That trouble has been experienced in egg hatching in the higher altitudes is wellknown, but we believe some of the difficulties attending that in past years has been overcome. It seems to us that in the irrigated districts of Colorado, where luxuriant vegetation abounds, there should be no trouble in raising poultry successfully. With conditions similar to those in other states, that is, good pasture and forage, sufficient animal food and the necessary grains, we see no reason why hens should not lay as well in the Centennial State as in the adjoining states. The judicious use of blood meal and alfalfa in connection with the grain fields should give good results even in the arid sections, although the higher altitudes may conspire to defeat even the best concocted rations in inducing the hens to shell out their valuable fruit.

Scaly legs is the direct result of carelessness. If the hen that hatches the chick has the scaly legs, the chicks will have them also. Moral: Dispose of all the scaly-legged fowls and paint the roost with lice paint. This will keep it away.

Laying Contests

Nine months of the Kansas State Laying Contest ended Aug. 1, 1905, with the pens standing as follows and with the indicated records:

S. C. W. Leghorns	706 eggs
R. C. R. I. Reds	696 eggs
R. C. W. Leghorns	666 eggs
W. Wyandottes	639 eggs
Buff Wyandottes	636 eggs
B. P. Rocks	519 eggs
L. Brahmas	476 eggs

Individual records:

W. Wyandotte, No. 4c 11	164 eggs
R. C. R. I. Red, No. 3	144 eggs
R. C. W. Leghorn, No. 6	143 eggs
B. P. Rock, No. 45	141 eggs
S. C. W. Leghorn, No. 3	139 eggs
Buff Wyandotte, No. 6	138 eggs

The winning ducks in the Australian Duck Laying Contest averaged 221 eggs each per year. The totals as follows: 12 Buff Orpington ducks averaged 163 eggs each; 54 Indian Runner ducks averaged 161 eggs each; 6 Blue Japanese averaged 149 eggs each; 6 Rouens 124 eggs each; 12 Pekins 95 eggs each; 24 Muscovy 71 eggs each.

F. W. Corey, formerly of Goshen, N. Y., is now manager of Rock Hill Poultry Farm, Ossining, N. Y.

The third annual exhibition of the Lancaster County Poultry & Pigeon Association will be held at Rudys Hall, Lititz, Pa., December 26 to 30. The judges selected are W. J. Stanton, C. T. Cornman and F. G. Bean. J. W. Bruckart is the secretary

Arthur Trethaway, of Wilkesbarre, Pa., writes us that his Black Minorcas are better than ever this year. This will make other breeders of Minorcas do some tall thinking, for Mr. Trethaway, for many years past, has been one of the great leaders in the Minorca ranks. His birds at the New York and other leading shows have set a very warm pace in the past decade, and much of the winning stock in this country traces its origin back to the famous Anthracite Strain of Arthur Trethaway.

Major Theodore Sternberg, Ellsworth, Kans., writes that although the fever has not taken very strong hold of him as yet, he is the proud possessor of some beautiful White-crested Black and White Polish chickens hatched from eggs laid by the famous William McNeal strain of hens. In addition to this he has some promising Barred Plymouth Rocks and a flock of the little Japanese Games he brought back with him from the Philippines.

Our good old friend, Deacon Ivory Sparks, of Swainton, N. J., writes very enthusiastically of the White Wyandotte female illustrated in The American Fancier of August 5, and believes the artist, Mr. Schilling, has delineated the correct ideal as far as shape and type are concerned. The deacon naturally compares this type with his famous "Belle of Cape May," one of the most typical Wyandottes shown a few years ago, and a bird that won many prizes at numerous shows for a period of five years. The type illustrated in the new Standard will approach the above-mentioned ideals quite closely. It will be Wyandotte, not Plymouth Rock, type that will be demanded in the future.

This is the good old summer-time when fishing is at its best. Consequently quite a number of gentlemen are offering alluring bait to members of specialty clubs in order to secure coveted jobs as judges of some special classes at the big shows next winter. This fishing for suckers is a beautifully little sport, and all it needs to make it a complete success is a weak-kneed management of a poultry show.

Messrs. D. Lincoln Orr and T. E. Orr expect to be in Buffalo, N. Y., August 20 to supervise the shipping and mailing of the new Standard of Perfection. The latter is now in the bindery and will be delivered to the secretary of the American Poultry Association as rapidly as possible after this week. The special leather-bound editions will be ready a few days later.

William G. Minich, of Carlisle, Pa., starts on the road this week with the largest and best string of birds he ever had. All who are acquainted with "Hamburg Bill," as he is called by the old-timers, are aware of the high grade of stock he carries and breeds. Bill expects to make it mighty interesting in the Game and bantam alleys at Hagerstown in October. Dr. A. A. Parker will have some very hot classes to handle there, with Minich, Cornman, Blunck, Glasgon and a few others, all showing Games and Game Bantams.

Theodore Hewes, T. F. Rigg and F. C. Shepard have been engaged to judge at the Cincinnati Show next January. Other judges will be engaged later.

Holyoke, Mass., will hold a big show in November. The score-card will be used and the following judges have been engaged: Felch, Ballon, Shove, Crangle and Peirce. Mr. George Barnett, Jr., is the secretary.

We receive inquiries now and then regarding the Old English Game Fowl. Very few are bred on this side of the Atlantic; in fact, we know of but one fancier in the East who has them, and that is Mr. Homer Davenport, of Morris Plains, N. J. Some ten years ago a large flock existed in or near Pittsfield, Mass. We believe Colonel Cutting was the owner of the same. He kept them for table use, for which purpose they are unexcelled.

In the midsummer number of The Feathered World, Mr. Edward Barnes contributes a lengthy article on the Old English Game Fowl in which much interesting data is found. Mr. Barnes claims that the originator of this breed existed many centuries ago and as far as is known the Old English Game Fowl was the first to exist, and all other breeds followed after. Reference is made to this breed in very ancient history. The breed is also found in some very old pictures and in all probability it is the Game cock referred to in Scripture. Although ancient, it still holds its own, and is for all-around purposes difficult to beat. There are many varieties of this breed, the Black-breasted Reds and Spangles being the most popular. The main point to be considered is shape, and this is very important; also white legs in preference to yellow.

That good old fancier and veteran judge, Philander Williams, in an article on Poultry Judging, in the August number of Poultry Success, remarks:

"The management of exhibitions are often at fault in the manner in which the birds are cooped, and expect too much of judges. No man, I do not care how good a memory he has, or how anxious he is to do right and make his cuts uniform and consistent, can judge twenty-five cocks scattered all over the show-room and be satisfied with his work. I well remember years ago at Chicago, I was elected to judge a variety, and the first thing I did was to get all the cocks in a row by themselves. Now, take the first section in the scale of points, typical carriage. There is more or less comparison in scoring birds, and as there are no two judges that agree exactly what a symmetrical bird should be, tell me if he should not walk up and down before the row of cocks and find out by comparing them which one is the nearest to his ideas of symmetry, and the next and the next. I contend in this way only can a judge be consistent and uniform in his cuts. I have always remembered the work I did at that time as being the most satisfactory to myself of any judging I have done, and, if memory serves me correctly, I think the exhibitors were satisfied also. In the other sections of the scale of points, the Standard is plainer or more explicit, and yet I believe it a good plan to compare the birds."

The above advice ought to be heeded by all interested, be they judges or managers of shows. Mr. Williams really makes a good point in favor of comparison judging while advising how to score birds.

There is nothing more unsatisfactory to a conscientious judge than to score birds in a bad light or in crowded or small coops. Where the number of birds in a show is small, the individual specimens can be carried to a roomy coop, placed in a strong light and satisfactory work done as far as scoring birds without comparing them is concerned. Where doubt or ties exist, birds can be compared and the scores adjusted properly. But in a large show where a judge is compelled to handle and score hundreds of birds in a few days, it is simply impossible to expect satisfactory work of him. It takes time to properly score a bird and even after the scores are added up and specimens afterward compared that score nearly alike the fallacy of the system will be readily discovered. There is no such thing as a tie in the value of several birds; there is a choice always.

The twelfth annual show of the Sanatoga and Schuylkill Valley Poultry, Pigeon and Pet Stock Association will be held at Sanatoga, Pa., November 29 to December 2. This is one of the best-managed exhibitions in the Keystone State, and the location of the hall, as well as its adaptability is excellent. Mr. S. J. Kurtz is again the secretary—the right man in the right place.

Do lightning and thunder influence the hatching of eggs? This question is often asked but rarely answered with any degree of certainty as to real facts governing the case. The latest contribution on this question is from the pen of Henri Bliss, which appears in a Belgian poultry paper. Mr. Bliss, after discussing the various theoretical notions regarding the troubles a hen experiences when quietly sitting on a choice bunch of eggs, should a thunderstorm appear on the scene, winds up by giving the following more or less plausible opinions:

"A breeder cites the following fact:

Gallery of Fame

A. T. BECKETT

DR. A. T. BECKETT, the champion of Open-laced Silver Wyandottes, an ardent lover of the briny deep, and experienced poultry judge, and one of the best physicians in his section of the country, has been portrayed as above by our special artist. That the doctor is an all-round good fellow is fully assured when we state that he is the best friend of both E. B. Thompson and Editor Drevenstedt.

Some goose eggs had been put in incubators near a place where wood-cutters were chopping some wood. Although these eggs had been sat on as usual none succeeded. The goslings were formed, but they were dead before being hatched. Some hatchings of chickens placed in the proximity of a grain-threshing machine suffered the same fate. The loss of the hatchings appears, then, to have been the result of violent shocks, which caused the ground on which the eggs were resting to vibrate. It is therefore admissible that the electric discharge and the thunder which accompanies it often produce the same effect. The instinct of the fowl leads it to sit in some place secure from the vibration of the ground. At liberty she searches for a place isolated and a little raised, but not in a hedge or a haystack or near a road over which heavy vehicles pass, or in any place exposed to the vibration of the earth. It is not impossible that this instinct gives to us the explanation of the influence of thunder upon hatchings."

Guinea-hens will steal their nests, undergo all sorts of hardships caused by wind, cold and rain, besides weathering several thunderstorms while incubating their eggs; yet they manage to hatch out a full brood of chickens as a rule. We have noticed the same thing years ago with ordinary farmyard hens.

Raising squabs and Homing Pigeons requires the greatest care in selecting healthy birds to breed from if the best results are to be obtained. A well-known Homing fancier some years ago remarked: "When all goes well, and the pigeon is fit, vigor and beauty are its characteristics; its plumage is smooth and sleek and the neck-feathers are brilliant as the rainbow. Walking, the head is carried erect; standing still, it is on wires, while the eye has something to discover here, there and everywhere. Go into the loft any morning, run your eye over your hundred birds, if you have them, and the single bird that does not return the compliment is not fit for pannier or breeding pen. The eye is the index of health in all animals. If dull, or a bird sits winking in a listless manner, something is wrong surely. Sickly birds shun society and mope in dark corners. The droppings in the loft should be noticed. They should be firm and have a fair proportion of white among them. On peas and beans there will be more white aparent, and in some foods, barley, for instance, very little." This is excellent advice, and there is no truer evidence of a bird being fit than this restlessness and movement of the head and eye. T. Fred Goldman, one of the best Homing men in the United States, and whose writings under the name of "Fritz" were greatly enjoyed years ago, once remarked: "One of the best flying men I ever knew told me that he could determine the condition and general health of a loft simply by casting his eye along the droppings in the loft, and from close observation for years past I quite agree with him. It has long been my custom to daily follow this line of observation and while ocasionally certain kinds of grain will produce more or less looseness, yet the experienced eye soon learns to detect the difference between a natural, healthy looseness of the bird and the watery, unhealthy one."

We notice a tendency on the part of some writers and editors to encourage protests at poultry shows where the defeated exhibitor is not satisfied with the judges' awards. Our old friend, Isaac K. Felch, is among this class of writers. Mr. Felch, as judge of poultry, has had a longer experience than any other man in America. He is now seventy-one years of age and we believe should know the evils resulting from the encouragement of protests. An editorial on this subject in our English contemporary, Poultry, among other things states:

"Let, then, in all cases, the decisions of the judges be final. If the officials have really and in truth given awards that are unjustifiable, 'the Press,' that most powerful of all appliances to rectify real abuses of power or appointment, will undoubtedly correct the error already committed, and equally prevent its recurrence on future occasions. The final result of unseemly controversy during the time the show remains open to all who choose to visit it must be patent to every committee who unhappily has been subjected to the annoyance. It actually ruins future prospects altogether, and consequently, if from prudence alone, ought by all available means to be avoided. But, like many other failings, even this objection, if advisedly treated, will undoubtedly very speedily effect its own cure.

"If any gentlemen acting as arbitrators have really given unjustifiable awards, poultry committees will effect the quickest remedy by not again engaging their services; if, on the contrary, these gentlemen are unjustly assailed, the false accusers will gain no enviable prominence in public estimation by urging impeachments they cannot sustain. All the angry recrimination consequent on such outbursts in the show will be avoided, and the popularity of the meeting will be unimpaired.

"We offer these hints to the consideration of poultry committees, whose interests and comforts are alike enlisted, to establish on some settled basis one undeviating regulation that will permanently prohibit the recurrence of misunderstandings, which it is well known invariably, when once permitted to attain 'full play,' tend to both present acrimony and uproar equally with future pecuniary disadvantage."

We commend the above for careful perusal by Mr. Felch and also Mr. Feil. The latter in his article that appeared in a number of papers last month, has started up considerable discussion, and, we are afraid, has not succeeded in gaining the point he was after. We believe Mr. Feil to be thoroughly sincere in his convictions; in fact, a long letter received from him a few days ago convinces us that he has plenty of reasons for doubting the judgment of some men. He seems to be aware of "some doings" at several large shows last year, but he can not make out a case unless he gives the names of the offenders, accompanied by sworn testimony as to the truth of his charges. Even then it will be a hard matter to convince the public entirely. There is only one way, and that is to prefer charges on the spot and have the executive committee of the exhibition examine into them. This was once done some twelve years ago at a show held in New York State, the judge found guilty of collusion with an exhibitor. This judge has not been employed in this or other Eastern states since that day. The exhibitor, we believe, dropped out of sight for a few years afterward. There was a real ground for protest in the above case and the real remedy was applied and it worked like a charm. Protesting an error of judgment, however, is another story. It usually ends in the protesting parties losing their five dollars. And why not?

A shrewd judge and buyer of poultry evidently can make money quite readily in old England. A writer in Poultry, in speaking of one of these "Exhibition Middlemen," as he terms such buyers, says: "There are many examples of the former, and if proof were wanted of this I could quote dozens of cases, but one will suffice, and this perhaps the most striking of all. As the facts have been made public, I can give details. It refers to the sensational sale of a Partridge Wyandotte cockerel at the International Show last year by Mr. John Lee, for a hundred and sixty-five pounds, the bird having been purchased by Mr. Lee for sixty-five pounds some few weeks previously, and winning while in his possession two first prizes and three cups at the Partridge and United Wyandotte Club Shows. This profit of a hundred pounds is probably the most that has ever been realized on a fowl in so short a time; but there are other instances where birds have been shown once or twice after being purchased and then resold at an excellent return for the outlay." Another instance is cited where an Indian Game hen was purchased for twenty-one shillings and disposed of for fifteen guineas. A Buff Orpington cockerel catalogued at five pounds was claimed and in the new owner's possession proved to be one of the champions of the year sold for forty pounds. These figures may startle some of our Reuben Glue practical poultry advocates, but they are facts real and substantial. It is what keeps the fancy alive, this very dealing in and striving for high-class exhibition specimens. Some of our kind practical poultry writers and publishers who sneer at all this "fancy stock" would be shoveling potatoes or putting hay on the farm if poultry papers were not in existence. The only cause for existence a poultry paper has is the dissemination of information relating to thoroughbred stock and its source of income is due the latter and the advertisements of fanciers. A poultry paper without any information on or illustrations of standard-bred fowls, giving only practical notes on how to feed and set a hen, how to rear chickens, and how to kill and dress them, would be about as interesting as a medical dictionary. It might succeed for a few issues, after which the whole busines is so well impressed upon the mind of the weary reader that he cries "enough." Fanciers pay the bills, i. e., they subscribe and advertise, and that brings the revenue to the publisher. The latter in turn must cater to fanciers and be one of them. The freemasonry among real fanciers is too great to overlook. It is a binding tie that holds. The good will and good fellowship are very potent factors in making the shows and the papers successful.

White Plymouth Rock Special

Editor American Fancier:

I am a fond admirer of White Rocks, believing that when all things are considered they are as near "it" for American poultrymen as we can find. Believing that an exhibition of White Rocks by such men as Fishel, Root, Graves, Peacock Farm, Chapman, and McQuillian, would be of great interest and value to White Rocks, I would like to be one of the twenty persons to give five dollars each to constitute a cash gold special for best pen—cock, hen, cockerel and pullet—the exhibit to be held at Madison Square Show. If any persons wish to join me in this cash special notify me and when twenty have signified their willingness I will drop them a postal, and they each will send their five dollars to Mr. H. V. Crawford for the special.

Very truly,
Walter Austin Wagner,
705 First Ave., Asbury Park, N. J.

Success With Poultry

The writer met Mrs. Mollette at St. Louis and listened to her urgent invitation to the members of the American Poultry Association to go to Denver. In reporting a visit to Southern California, she relates some facts that might well be considered throughout the entire country. One of these is the statement that at an evening gathering of a number of poultry people in that locality an estimate was made of the amount of poultry kept on the square mile that happened to be about them at the gathering. This estimate showed that over 35,000 chickens were owned and kept on that space of ground. Another statement made by her is the enthusiastic one that the thought has forever been banished from her mind of its being impossible to make a good living from keeping poultry alone as a business. She states that although she did not see the 8,000-hen plant that she has heard of, yet she had seen enough to satisfy her that poultry was a paying proposition in Southern California.

This brings to mind the thought that the people of the South along the Atlantic coast might do as well as the people of the Pacific coast have done. Poultry keeping should be more generally distributed through the South. Poultry and water-fowl of all kinds can be easily grown in all Southern localities. The advantage of having plenty of fresh-laid eggs during the winter months, when they demand the largest price would be present with the people of the South; their hens would lay when the sun was falling in the North. The demand for these eggs is constant. It is only necessary for the people of the South to grasp the situation and build such plants to gain their full share of the profits that are being so readily made from the hens. We saw, a short time since, the report of a person who had visited a large egg farm during the past winter. This report tells us that the party witnessed the anxious and persistent scratching and digging of over 2,000 hens in the litter of the hen-houses in scratching for small grain. This raised a cloud of dust that proved satisfactorily that the floors were perfectly dry, and the cackle and singing of the hens told of the egg production in that poultry house.

All that is necessary is for the people of the South to have properly-constructed houses, to have a well-selected line of hens for the purpose and locality, and to care for them as other people care for their poultry, so as to gain a good profitable egg yield from them through the winter months, and the desired profit would come quickly to those owning the plants.

We know that there are certain conditions to contend with throughout the South; we also know that so soon as the proposition is actively taken hold of, all these difficulties, including the numerous attacks of insects and chigoe will be overcome and obliterated, the same as has been done with the nuisance of hen-lice and mites in the Northern plants. Study the conditions and overcome them, and success will be obtained.

A ground floor is not a good kind of floor for a pigeon house. A good, dry board floor is always the best. If the floor is near the ground, it is a good plan to lay the boards in cement. The floor of the flyaway may be on the ground. If there is some grass growing in the flyaway, this will furnish a little green picking for the pigeons. Pigeons do not need green food, but all of them relish a very little of it occasionally.

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

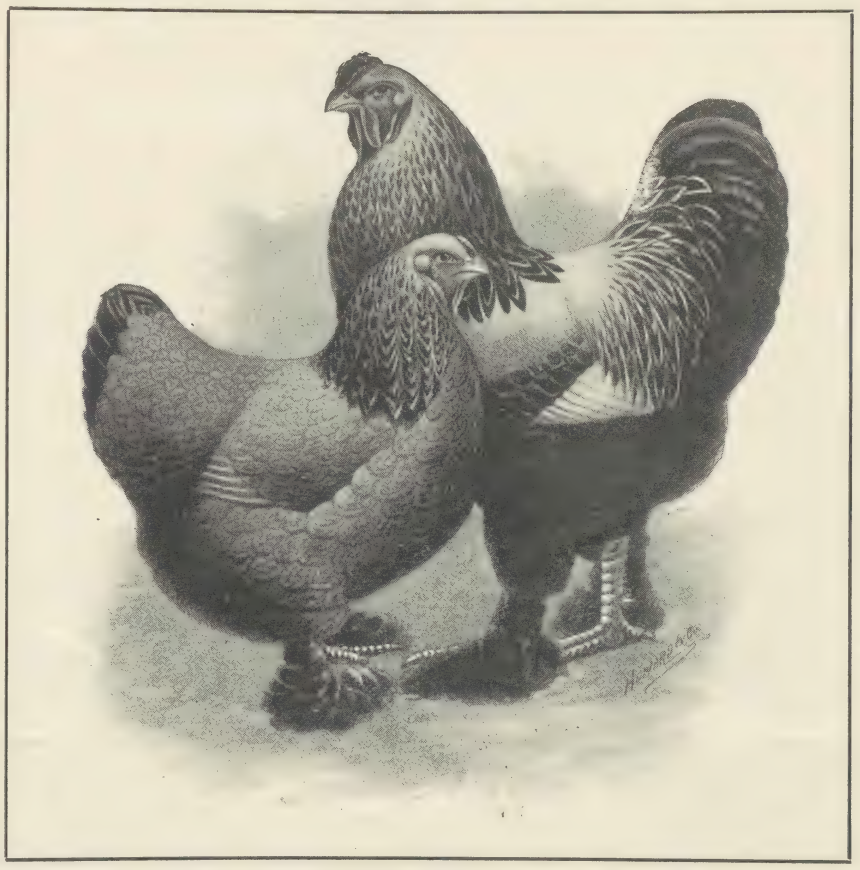
Volume XXIV. Washington, D. C., September 2, 1905 No. 620

Notes on the Egg Trade of Britain

By John Wharton

Again and again I have read articles which try to make it appear that England can and should produce her own eggs. Year by year statistics are given telling us that we pay the foreigners over nine hundred pounds sterling for eggs which in the ordinary way should go into the British farmer's pocket. "Can not we produce our own eggs?" we are asked; and I emphatically say that we can not produce the cheap eggs that are demanded by the poorer class and those that are used for manufacturing purposes. How is this? Well, to put the fact in a nutshell, they cost more to produce than the buyer is willing to pay.

I went into this matter years ago, when I kept a stock of utility birds, and the lessons then taught me briefly were these: It cost me just one dollar a year to feed a bird, and from a flock my highest average was 165 eggs per bird; with eggs selling from three cents each in winter to eighteen for a quarter of a dollar in summer, I found that eahc hen produced me $2.50 worth of eggs. Now, if I had to sell them at French prices, where, I am informed, they are paid for at the rate of from twenty to thirty-six a quarter of a dollar, where would my profit be? No, the fact is they can be produced at less cost in other countries than ours. In London and other large cities in winter, when English-warranted fresh eggs were selling at five to six cents each, good-looking crate eggs were marked two cents each and even less.



Of course, much might be done to improve a high-class trade if farmers would only awake to the fact that there is money in it; but there are many drawbacks to cripple the egg farmer in England, and one of the greatest is the preservation of foxes for the hunt. In the hunting district it is impossible for the farmer to keep birds with success. In those districts you will find all the fowls on the farm running around the farmyard where there is less chance of a fox visit than if distributed over the farm. At night they are shut up in the poultry-houses and are not let out until the farm hands are stirring about, or Mr. Fox is likely to take one or more home for breakfast.

Over the luncheon table at Ripon Show last week I conversed with two intelligent farmers on the egg question. Both were very keen on the egg trade, and they kept a stock of Leghorn-Minorca cross birds for egg production. They told me how they had various losses from the foxes and how it was well-nigh impossible to keep them from their depredations.

At the Leicester County Show I saw a poultry house fitted with a fox trap, a contrivance to keep Mr. Fox from entering the house. It was very simple; the board on which the hens alighted to enter the house had a weight attached which was so arranged that when the weight of a fox came on it it lifted and closed the hole. But of what use was this except during the dark? We all know that the habit of a hen is to be out as soon as light, and it is then that foxes are most liable to be out hunting.

To keep hens shut up until danger appears to be past ruins the egg output. I am firmly convinced that there is truth in the old saying, "The early bird catches the worm," and it is the insect life that the hens pick up in the morning that goes far to make up a good egg yield. Now, with this pest in many countries, how can the farmer produce eggs with success?

Another drawback is the railroad rates. I was told in London the other day that it cost more to send a box of eggs from Cornwall, which is the southwestern extremity of England, to London, than from Russia to London. The cost of carriage eats up the profit. The railroad companies have made several concessions on this score lately, and I trust they will yet do more to encourage the egg trade.

DARK BRAHMAS

Then, again, the farmer is not without faults in the matter, faults which are against his best interests. In my own district they are all grazing farmers with some of the richest pasture lands in England. Here hens might be kept by the thousands distributed over the farms, as we have no foxes and very little vermin of any kind, while the people are so honest that you can safely place the birds anywhere. During the past fifteen years a move has been made in the right direction, and some farmers are adding to their farm's income very nicely by the production of eggs. One farmer told us recently that they paid as well or better than any other stock on his farm. On many farms there is a great lack of management, keeping poor stock, keeping them until too old, failing to hatch at the right time, not collecting the eggs properly so that much trouble is caused to the egg dealer by bad eggs. A non-smoker once said that he would stop smoking by making smokers consume their own smoke, and I would, if I had the power, make those who put bad eggs on the market eat them themselves—they would not want a second serving. At this time of the year they are at their worst. It is hay time and the farmer is busy, so he neglects gathering up the eggs, while many hens are brooding. The result is that when he does gather them many of the eggs would be chickens if let there eighteen days, and by the time they get into the consumers' hands they are bad.

Some years ago I tried the egg trade, sending them to London and several Lancashire towns. The demand was good and there was money in it, but it was all stopped by bad eggs. Do as I liked, I couldn't get them right. It is an abominable shame that farmers will thus cripple a paying industry.

To sum the whole matter up, a good business can be done in perfectly fresh eggs, and consumers are willing to pay a good price if they can get the right article. The Poultry Organization Society is doing much to help on the trade by having depots and collectors, who collect them several times a week and stamp with name of farmer and get them into the cities before they are four days old. In some districts this is being worked with success, while in others it is a failure.

In regard to the cheap egg trade, we can not compete with the foreign trade, so we must do without that and in the meantime cultivate the tastes of the people for a fresh egg. The best eggs we get in England from abroad are the Danish eggs, closely followed by the Canadian, while the worst are those from Russia. The Danish are so good that some unscrupulous dealers have repacked them with the Irish cases and sold them as the production of Erin's Isle.

The price of eggs varies much in different parts of England. In Cornwall they are cheapest. I was told last week that they were selling at thirty the quarter dollar, but I hardly think they can be as low and I fancy if I struck off, say two, I would be nearer the mark. Near the cities they run from two to six cents each, while out in the country they run from eight to twenty the quarter dollar, according to season.

In Ireland they are much cheaper than in England, and I am informed that in the north of Scotland they are remarkably cheap, but varying very much in quantity and size. I am convinced that in no branch of the farming world is there such a chance for the intelligent farmer to make money as in the production of geunine fresh eggs, if he will only lay himself out in a businesslike way.

It is a curious fact that colored eggs will always command a better sale than white, and thus there is a tendency to breed for color of eggs. In Cornwall the Minorca and its crosses find favor; of course this means a white egg, but the size is good. In Sussex the old-fashioned Sussex fowl is largely kept, as there they want flesh as well as eggs, as London gets its supply of choicest chickens from this district.

In Lincolnshire the Lincolnshire Buff, which is not unlike the American Red, almost reigns supreme. In Scotland the Hamburg, Scotch Grey and Leghorn are the foundations of all the stock you see on the farms. In Ireland they are such mongrels that they appear to be closely related to the jungle fowl, and what is then made up is to me a puzzle. I am glad to say that the Irish people are awaking to the fact that their breeds can be improved and much is being done in that direction. Ireland produces a large quantity of duck eggs. In some districts you can see some large flocks of Indian Runner ducks, which almost pick up their own living and lay splendidly.

Overcrowding

Overcrowding the poultry of all kinds, young and old, geese and ducks as well, has had more than usual attention the past few weeks in our exchanges. Great loss in some of the warmer localities has been reported through overcrowding. To allow the young chicks in the brooder to become chilled at night is the first offense against this law. One man reports the loss of over one hundred in one night from this cause. Young ducks are destroyed in the same way. Growing chicks that are neglected and too many crowded into a small coop at night is the second offense, and the third and crowning disaster comes during the very hot summer nights, when the poultry is compelled to roost in close, badly ventilated houses where there is not sufficient room on the roosts, so that they are compelled to crowd over and under each other and become so overheated as to cause apoplexy and hen cholera. All of these are the result of neglect and careless management, which should be avoided.

PIGEONS

About Squabs

At Pewaukee, Wisconsin, there is a very large squab ranch, which is described by Editor Frackelton in very glowing terms. He states that many hundreds of pairs of breeders are kept there in a very fine building, largely drawn from the surplus of lofts that breed for flying Homers in races.

At the present time there are about one thousand pairs of breeders in the loft, which belongs to Mrs. George, and it is located at Rocky Point, near Pewaukee. This lady is very much interested in breeding squabs, and suggests that farmers might add to their income by going into the squab business. Editor Frackelton defines the farmer as one who makes his money in the country and spends it in the city, and the agriculturist as one who makes his money in the city and spends it in the country. There is another definition of these two followings: "The farmer works the land, and the agriculturalist works the farmer." We trust that these articles will not lead people into extravagant ideas of the profit in the squab-growing business. There is profit made in the business, but we have yet to learn of any one with the ability equal to starting in with the management of one thousand pairs of breeders. One not thoroughly conversant with the management of so large a flock would be confronted with so many difficulties that unless they have a heart of stone they will become discouraged. Profitable squab plants are usually the result of small beginnings.

There is located at North Wales, Pennsylvania, one of the most successful squab growing plants in the United States. This is carried on by E. C. Cummings, who seems to have made a grand success of the adventure. He has studied the problem and gradually increased his business until he has a plant that would rival many of the large poultry plants of the country. Mr. Cummings has experimented on many crosses. Among these the most valued are the Runt Homer crosses, but the most attention is given to the pure Homer blood, White Dragoons and the large Runt pigeon.

In selecting the Homers, if special attention is given to securing the largest females obtainable for the matings, the size and weight of the squabs can be greatly increased to from nine to ten pounds per dozen, but this is the result of considerable care and watchfulness in selecting, mating and feeding of the pigeons. Mr. Cummings writes us that he is so busy with his large squab plant that he has scarcely time to pay any attention to outside affairs.

Another gigantic plant is known as the California Giant Pigeon Company. We presume that more kinds of crosses have been made here than in any other locality in the country. Comparisons are made in their illustrations by photographs of the difference between Runts, Runt crosses and Homers. The Hen pigeon seems to be in favor in that locality, and we imagine that where there is such an extended period of good weather for rearing squabs that the business would be most profitably carried on.

Another very large plant is located at Allentown, Pennsylvania. The last time we visited this locality the owner had almost three thousand working pairs of squab producers. These were kept in lofts built over the duck houses with hanging flyways on the outside of the loft, the pigeons never being permitted to fly upon the ground or go upon the wing at all upon these lofts. This we know to be a most successful and profitable plant, which was started with about two or three hundred pair of breeders. Homers, colored and white, Runts, Hen pigeons and crosses of both of these with Homers, are used at this plant.

BLUE DRAGOON

As stated many times before in the columns of our papers, we advise all who are interested in these heavy crosses to be careful in the selection of the birds they use, and not to attempt to go too extensively into it at first. There is nothing in the pigeon line so difficult to manage for squab breeding for profit as the heavy pigeons. The active Homers can be easily handled by almost any one, but we must learn to care for these over large specimens, and to study their nature. We would advise those who wish to go into the larger heavy-weight classes to move slowly, use judgment, and not make too large an expenditure, for nothing is so discouraging and detrimental to the growth of a plant as failure and loss in an attempt to start it.

Dry, well-ventilated, properly cleaned pigeon houses assure success.

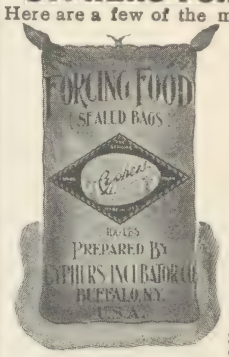
Short-faced Tumblers

One of the most attractive family of pigeons is the Short-faced Tumbler. The most valuable and the most difficult to grow of all these are the Almonds and their subvarieties. The Almond pigeon gains its name from the fact that its coloring should be like, or as closely as possible, to the color of the inside of an almond shell. In these there are seen almost as many colors as can possibly be found in the shade of yellow, some of the feathers being almost a dark brown. In these there is what is termed Yellow Agate, the Kite and the Splash. We do not wish to go to any extent into this, as there are so many varieties to select from that it is scarcely possible in limited space to describe them all.

The Short-faced Bald Heads are of many colors, the most beautiful of these being the blues, blacks, reds and yellows. The twin cousins of these are the Bearded Tumblers, which have a white marking directly under the beak, which extends from the eye around under, making a white marking about as wide as your three fingers or less. We might add to these the Wing Tumblers, the Mottles, Solid Blacks, the Flying Tumblers of all kinds and character of marking. These beautiful little pigeons can be grown almost any place and nothing is more desirable in the pigeon line than these for small boys and beginners.

We have seen lofts of Flying Tumblers that were the admiration of a neighborhood. One of these, we remember, was located in the gable of a very large barn, and we have seen the flight of fifty or sixty of these just before sunset at night when their high flights, rolling and tumbling through the air, was an amusement for the neighborhood almost every bright summer evening for several years. The Tumblers which you can take upon the rug in the parlor and shake a fan at quickly or your hat or hand and have them turn somersaults in the air, are a most pleasing attraction in any household on a winter evening. All of these may be kept in a loft that will do for any kind of pigeons, the inside Tumblers being provided with nesting places close to the floor.

Notes



When squab breeders are kept in heated houses in the winter naturally more young are to be expected, but to keep them in good health have different sets of producers for working in the heated houses in winter from those you use in the cold houses.

Give a variety of grain to your pigeons. Do not feed all of one kind, and, in addition to this, scatter a little on the floor to tempt them to eat and feed their young about midway between morning and noon, and noon and night.

The better bred, the better cared for, and the better trained are your pairs of all kinds, the more satisfaction will you have from them.

We have heard it said that it is not a good plan to go into the pigeon houses at night with a lantern. We inspect our pigeon loft at night with a lantern, and we know a number who have electric light and gas light in their lofts for the convenience of examining the pigeons and their nesting places at night. Pigeons can be trained to permit this the same as they allow your appearance in the daytime.

CYPHERS INCUBATOR CO.
MAKES
Everything Required In Poultry Keeping.
For the rapid development of broilers, roasters and show birds, use
CYPHERS FORCING FOOD.
Here are a few of the many articles we sell:

Lice Powder,
Lice Paint,
Fumigating Candles,
Disinfectants,
Egg Preservative,
Chicken Punches,
Chicken Coops,
Portable Poultry Houses,
Brooding House Heaters,
Shipping Coops,
Egg Carriers,
Food and Water Vessels,
Bone Cutters,
Leg Bands,
Egg Testers,
Thermometers,
Poultry Remedies,
Wire Fencing,
Roofing, Etc., Etc.

Poultry Awards of the Rockville Fair

Received too late for comment this week.

Dominiques: Hen—first, Valdosta Poultry Ass'n. Buff Orpingtons: Cock—first, Hoke & Son; second, Wm. Palmer; cockerel—first and second, John Shorts; hen—first, John Shorts; second, Hoke & Son; pullet—first and second, John Shorts; pen—first, first and second, John Shorts. Black Orpingtons: Cock—first, Hoke & Son; hen—first and second, Hoke & Son. Black Java: Cock—first, Valdosta Poultry Ass'n; cockerel—first, H. Janssen; second, H. Janssen; hen—first, Valdosta Poultry Ass'n; pullet—first and second, H. Janssen; hen—first and second, H. Janssen. Mottled Javas: Hen—first, Valdosta Poultry Ass'n.

Barred Plymouth Rocks: Cock and pullet—first and second, Valdosta Poultry Ass'n; cockerel—first, Valdosta Poultry Ass'n; second, Geo. Lamar; hen—first, Leo Pritchlynn; second, A. M. Lothrop; pen—first, Hoke & Son; second, O. B. Williams. Buff Plymouth Rocks: Cock—first, R. P. Hines; second, Hoke & Son; cockerel—first, Valdosta Poultry Ass'n; second, R. P. Hines; pullet—first, R. P. Hines; second, Valdosta Poultry Ass'n; pullet and pen—first, Hoke & Son; second, E. P. Hines. White Plymouth Rocks: Cock—Hoke & Son, first; R. P. Hines, second; cockerel and pullet—first and second, Hoke & Son; hen and pen—first and second, R. P. Hines.

Buff Wyandottes: Cock, hen, pullet and pen—first and second, Calvin Hicks; cockerel—first and second, Hoke & Son. Black Wyandottes: Cock, cockerel and pullet—first, Hoke & Son; hen—first, Valdosta Poultry Ass'n; second, Hoke & Son. Silver-laced Wyandottes: Cock—first, Hoke & Son; second, R. P. Magruder; cockerel and hen—first and second, Hoke & Son; pullet—first, Valdosta Poultry Ass'n; second, Hoke & Son; hen—first, Hoke & Son. Golden-laced Wyandottes: Cock and cockerel—first and second, Hoke & Son; hen—first, Valdosta Poultry Ass'n; second, Hoke & Son; pullet—first, Hoke & Son; second, Valdosta Poultry Ass'n; pen—first, Hoke & Son. Silver-penciled Wyandottes: Cock—first, Hoke & Son; cockerel, hen, pullet—first and second, Hoke & Son; pen—first, Hoke & Son. Partridge Wyandottes: Cock and cockerel—first, Hoke & Son; hen—first, Valdosta Poultry Ass'n; second, Hoke & Son; pullet—first, Hoke & Son; second, Valdosta Poultry Ass'n. White Wyandottes: Cock—first, Hoke & Son; second, A. M. Lothrop; cockerel—first and second, Hoke & Son; hen—first, Wm. Hughes; second, A. M. Lothrop; pullet—first and second. Wm. Hughes; pen—first and second, Valdosta Poultry Ass'n.

Rhode Island Reds, S. C.: Cockerel—first, Hoke & Son; second, Valdosta Poultry Ass'n; pullet—first, Hoke & Son; second, Valdosta Ass'n. Rhode Island Reds, R. C.: First cock, first and second pullet, first hen, first and second cockerel, first pen, Hoke & Son.

Brown Leghorns, S. C.: Cock—first and second, W. Waters; cockerel—first and second, R. C. Booth; hen—first, S. Pritchlynn; second, W. Waters; pullet—first, R. C. Booth; second, W. Waters; pen—first, S. Pritchlynn; second, W. Waters. S. C. Black Leghorns: Cock—first, Valdosta Poultry Ass'n; second, Hoke & Son; hen—first, Valdosta Poultry Ass'n; second, Hoke & Son. S. C. Buff Leghorns: Cockerel—first, Valdosta Poultry Ass'n; second, C. Hicks; hen—first, Valdosta Poultry Ass'n; pullet—first, C. Hicks; pen—first and second, C. Hicks. Dominique Leghorns: Cockerel, hen and pen—first, Hoke & Son. S. C. White Leghorns: Cock—first, Valdosta Poultry Ass'n; second, Hoke & Son; cockerel—first and second, Hoke & Son; hen—first, A. C. Burris; second, Hoke & Son; pullet—first and second, Hoke & Son; hen—first, A. C. Burris; second, Hoke & Son; pen—first, Hoke & Son; second R. P. Hines. Silver Duckwing Leghorns: Cock—first and second; cockerel, hen, pullet—first, Hoke & Son. R. C. Brown Leghorns: Cock—first, Valdosta Poultry Ass'n; second, Hoke & Son; cockerel—first, Hoke & Son; second, Valdosta Poultry Ass'n; hen—first and second, Hoke & Son; pullet—first, Valdosta Poultry Ass'n; second, Hoke & Son; pen—first and second, Hoke & Son. R. C. White Leghorns: Cock and cockerel—first and second, Hoke & Son; hen—first, Hoke & Son; second, Valdosta Poultry Ass'n; pullet and pen—first and second, Hoke & Son.

S. C. Black Minorcas: Cock—first, Valdosta Poultry Ass'n; second, Hoke & Son; cockerel—first, Valdosta Poultry Ass'n; second, Hoke & Son; hen—first, Hoke & Son; second, Valdosta Poultry Ass'n; pullet—first, Valdosta Poultry Ass'n; second, Hoke & Son. White Minorcas: Cock, cockerel, hen and pullet—first and second. Valdosta Poultry Ass'n.

Blue Andalusians: Cock and hen—first and second, Valdosta Poultry Ass'n. Mottled Anconas: Cock—first, Valdosta Poultry Ass'n; second, Hoke & Son; cockerel—first, Hoke & Son; hen—first, Valdosta Poultry Ass'n; second, Hoke & Son; pullet—first, Hoke & Son. White-crested Black Polish: Cock, hen, cockerel and pullet—first, Valdosta Poultry Ass'n. Golden Polish: Cock and hen—first, Valdosta Poultry Ass'n. Silver Polish: Cock and hen—first, Valdosta Poultry Ass'n. White Polish: Cock, hen, cockerel, pullet—first, Valdosta Poultry Ass'n. Golden-bearded Polish: Cock—first, Hoke & Son; hen—first, Valdosta Poultry Ass'n; second, Hoke & Son. Silver-bearded Polish: Cock—first, Valdosta Poultry Ass'n; second, Hoke & Son; hen—first, Hoke & Son; second, Valdosta Poultry Ass'n; pullet—first, Valdosta Poultry Ass'n. Buff-laced Polish: Cock—first, hen—first and second pen—first, Hoke; Light Brahmas: First and second cock, cockerel, hen, pullet, first pen, Hoke.

Black Cochins: First cock and hen, Valdosta. Buff Cochins: First cock and cockerel, Valdosta; hen—Valdosta first, Hoke second; pullet—first, Hoke; pen—first, E. Williams. Partridge Cochin: Cock and pullet—first, Valdosta. White and Black Langshans: Cock, cockerel, hen, pullet—first, Valdosta.

Golden-spangled Hamburgs: Cock—first, Valdosta; second, Hoke; hen—first, Valdosta, second, Hoke. Silver-spangled Hamburgs: Cock—first, Valdosta; second, Hoke; hen—first, Valdosta; second, Hoke; first and second cockerel and second pullet and first pen, Hoke. Golden-penciled Hamburgs: Cock—first, Valdosta; second, Hoke; hen—first, Hoke; second, Valdosta; pullet—first and second, Hoke. Silver-penciled Hamburgs: Cock and hen—first, Valdosta; second cock and hen, first cockerel, first and second pullet, Hoke. Black and White Hamburgs: Cock and hen—first, Valdosta; second, Hoke; cockerel and pullet—first, Valdosta. Red Caps: Cock and hen—first, Hoke. Houdans: First cock, cockerel and pullet, Hoke. White and Silver-gray Dorkings: First hen, cockerel and pullet, Valdosta. Silver-gray Dorking: Cock—first, Valdosta. Colored Dorking: Hen—first, Valdosta. Black-crested Red Games: Hen—first, Valdosta. Silver Duckwings and Sumatras: First cock and hen, Valdosta; first cockerel and pullet, Valdosta; second cock and hen, Valdosta.

Black Games: First cock, hen, cockerel and pullet, Valdosta. White Games: First hen, Valdosta. White Exhibition: First cock and hen and second hen, Valdosta. Cornish Indian Games: First and second cock and hen, Valdosta. White Indian Games: First and second hen, Valdosta. Black-breasted Red and White Games: First hen and cock, Valdosta. S. C. White Sherwoods: First and second cock, hen, pullet, cockerel, pen, A. C. Burriss. Pit Games: Cock, hen, cockerel and pullet—first, Valdosta. Fluffs: First cock, first and second hen, Hoke.

BANTAMS AND ORNAMENTAL FOWLS

Brown Reds: Cock, hen, cockerel and pullet—first, Valdosta. Golden Duckwings: Cock and hen—first, Valdosta. Red Quills: Cock and hen—first, Valdosta. White Games: First cock, hen, cockerel and pullet, Valdosta. Birchen Games: First hen, Valdosta. Malay B. B. Red Games: Hen first, Valdosta. Golden Sebright: First hen and pullet, Valdosta. Silver Sebright: First cock and hen, Valdosta; second cock and hen, Hoke. White Rose-combed: First cock, Valdosta, R. C. Blacks: First and second cock and hen, Hoke. Booted Whites: Cock, hen and pullet—first, Valdosta.

Buff Cochins: First cock, Valdosta; second, Wm. H. Johnson; hen—first, Hoke; second, Valdosta; cockerel—first, Valdosta; second, Jacob Henry; pullet—first, Valdosta. Black Cochins: First cock and hen, Valdosta; pen—first, C. Hicks. Partridge Cochins: First cock, Hoke; second cock, Valdosta; hen—first, Hoke; pullet—first and second, Valdosta. White Cochins: First cock and hen, second hen, second cockerel, second pullet, William Hughes; first cockerel and pullet, Hoke. Buff-laced Polish: First pullet, Hoke. W. C. Bearded Polish: First cock and hen, Valdosta. Dark Brahmas: First cock, hen, cockerel, pullet, second hen, Hoke; second pullet, Valdosta. Light Brahmas: First cock, hen, cockerel and pullet, C. Hicks.

TURKEYS

Bronze: Pen—first, Yohn.

DUCKS

Rouens: Pen—first old, first and second young, Dr. J. L. Lewis. Cayugas, old: First pen, Valdosta. White Muscovys: Pen, old—first, Valdosta. Colored Muscovys. Pen, old—first, Valdosta; second, Miss Ella Plummer; pen, young—first and second, Valdosta. Pekins: Pen, old—first, M. Yohn; second, Hoke; pen, young—first, C. Hicks; second, Hoke. White Calls and Gray Calls: Old and young pen—first and second, Valdosta. Crested Whites: Old cock—first, Valdosta.

GEESE

Toulouse and Embden: Old pen and young pen—first, M. Yohn. Brown Chinese and Wild: Old pen—first, Valdosta.

RABBITS

Belgian Hares: Old pen—first, Russell Hicks; second, W. V. Wilson. White English: Old pen—first; young buck—first and second, and second doe, M. V. Wilson.

White Guineas: First cock and hen, J. H. Short.

SPECIALS

Plymouth Rock Cup won by Hoke & Son, Springforge, Pa. Wyandotte Cup won by Calvin Hicks, Rockville, Md. Variety Buff Wyandotte Mediterranean Cup won by Hoke & Son. Variety R. C. W. Leghorn Asiatic Cup won by Hoke & Son. Variety Light Brahmas—whitest bird in show—one sitting of eggs, variety White Wyandotte, won by A. M. Lothrop, Falls Church, Va. Best pair of Pekin ducks, one sitting of eggs, won by M. Yohn, Westminster, Md. Best pair of Black Minorcas, won by Valdosta Poultry Ass'n, an umbrella, they being from Valdosta, Ga. Best display of poultry from Montgomery County, Md., won by Calvin Hicks, Rockville, Md., scoring 90 points.

Allentown, Pennsylvania

The great Allentown Fair will change their classification to single-bird entries, two entries to fill classes, two dollars for first, one for second, and four handsome ribbons, with liberal prizes on pens. Their dates are September 19 to 22. Send to R. B. Schall, Allentown, Pa., for catalogue of show.

Trenton, New Jersey

Trenton Fair comes the week following Allentown. Mr. Gladney has made the Trenton Fair Poultry Show one of the most attractive of all fall fair displays. His efforts for quality should be encouraged by all who visit the fall fairs. Send to the fair association for catalogue.

Hagerstown Fair

Every fancier should have an eye on Hagerstown this fall. It is their golden jubilee celebration. Mr. B. A. Betts is the superintendent and Mr. Spahr will fill his former position. Everything possible will be done to celebrate the memory of John L. Cost in the most elaborate manner. Mr. Betts wishes all poultry exhibitors to fully understand that there will be a greater effort than ever put forth to have Hagerstown in the lead. The same list of judges who have officiated for years will be there. In addition to these, Chas. McClave, Stephen T. Lea, A. A. Parker and Henry Tieman have been engaged. Every one interested in this great exhibit should write at once to B. A. Betts, Department 1, Poultry, Hagerstown, Md., for one of the premium lists. Silver cups and other specials have been added to the regular list. The cash prizes are the same as always—three for first and two for second.

Pigeons must have plenty of water and plenty of grit. In proportion to their size they use more grit than poultry.

A SPECIAL Combination

In order to more thoroughly complete our plans of organization, we have decided to make this Special Combination Offer to all lovers of Poultry and Pigeons of

The Feather and The American Fancier

ONLY ONE DOLLAR for BOTH PAPERS for a WHOLE YEAR

We are positive there never was a better opportunity for securing the Cream of Poultry and Pigeon Literature than is to be found in this combination. You get a paper every week edited and illustrated by the best talent in the country. It is a rare chance, and you can not afford to miss this combination. Send a DOLLAR BILL without delay and have your name on our list. Address,

Editorial Gossip

A Ph.D., of Coshocton, Ohio, pours forth volumes of disapproval of the articles Mr. Dechman recently published in the columns of The R. P. J., and the editor partially apologizes for same. We felt grateful to The Journal several years ago for publishing some articles from the pen of a Yonkers, New York, man about eggs. We are interested in Mr. Dechman's articles as well. Such articles as these and those from the pen of Mr. Shackelton give thoughtful men food for reflection. If the Ohio professor thinks no errors are made by the station workers he must bestir himself or become a poor critic.

Unfortunately, or perhaps fortunately for some of us, this one fact alone should encourage tolerance in us. Learn to select the good from the bad in all teachings, and hesitate to brand a willing worker or seeker after knowledge as a fool. We should rather encourage some of the radical teachings in the articles above referred to than to try to convince the people that it was reasonable to hope for ducklings to grow to sixteen pounds the pair in twelve weeks.

Editor Robinson of Farm Poultry digs into the Press Association as he would into a hill of potatoes, not to injure so much as to gain results. If his continual stirring up to have things that actually exist "different" attracts to himself and his paper the attention of the people, he has gained a point, and perhaps a profit. Mr. Robinson works continually for a purpose. This is commendable in any one. But to smile and be pleasant at times may be to your credit. Continually finding fault both going and coming is apt to class one among the faultfinders. You do not naturally belong there—brush the smoke from the glass and let the sunshine come in just a little for comfort's sake.

We should not go so far as to attempt to select another's company, nor to call him a social outcast should he see fit to flock by himself. No one should take it upon himself to choose for another nor should he continually find fault with all the organizations that belong within the line of his fellow workers. A tender word spoken to the wayward may benefit; continual faultfinding is sure to do harm.

We have watched the gradual forward movement of The League of New England Poultry Associations. We need more of these. This industry of ours is entirely too large to be neglected. Local and state organizations have plenty to do. All of these should be connected with the American Poultry Association as well. Editor Curtis has discovered much of value in the constitution and by-laws of the Association, the result of proof-reading same. Now, friend Robinson, let us urge upon you the task of seeking for good in the same channel that enlightened Mr. Curtis.

The first of the new illustrated Standards were finished August 23. Two hundred copies per day will be finished and sent out. It will take at least three weeks to finish enough to fill the orders in hand. We have arranged to have all orders through The Feather and The American Fancier filled direct from the publishers as soon as complete. All should be delivered not later than September 15.

In a bulletin issued by the Agricultural Experiment Station in New Mexico it is stated that to successfully treat the disease of scaly legs the scales must first be removed, so that the medicine can come in contact with the mites that create the disorder. To do this the shanks must be thoroughly soaked in soapy warm water until the scales are soft and come away easily. After the scales have been thoroughly removed, dry the shanks and apply the following: Balsam of Peru, 2 drams to one ounce of vaselin; mix thoroughly. The disease will respond readily to the treatment, if properly applied. In the words of Henry Shute, this ointment when once applied should "stick like all time." Balsam of Peru has great healing qualities, and we imagine that this mixture would be splendid for the ailment.

We notice that The Indiana Farmer copies from our columns an article on fowl management. This paper has always had the ability of selecting things from its exchanges and using them to the advantage of all concerned. The circulation of The Indiana Farmer has been extended largely through meritorious efforts of its editor, who always does his best to be on the right side of all questions.

Those who attempt to keep fifty hens in quarters that would scarcely be large enough for twenty court trouble and disaster in the poultry business. Along these lines The Journal of Agriculture states that it is like trying to crowd a barrel of wheat in a half-peck measure. This same paper further adds that hens compelled to scratch all day over a manure pile, to drink barn-yard water, and to roost in filth can not possiby return a profit to their owners, nor can they produce good, wholesome eggs. They quote the old-time saying of an Irishman's expression of how to make the hens fill the egg basket. He says, "I make the hens scratch so for grub that they are awful glad to get upon the nest and lay an egg, so that they may rest a while." These statements are certainly up to date and fully in line with what people should strive to do, if they hope to have a profit from their poultry next winter.

One of our western exchanges asks the question as to how many of their readers have kept their poultry houses in fit condition for the poultry to live in during the last few months. They would like to know just how many of their poultry readers can hold up their hands and state that the houses in which their poultry is compelled to live would be a fit abiding place for the owners for the short space of one-half hour. They venture to state that if a vote was taken, the returns would not be in favor of the owners of the houses. While we feel that there is not as much attention paid to these matters as there should be, we should not like to think that it was so desperately bad that the owners themselves would not like to venture upon the premises.

Again we notice the statement that many poultry raisers regard Venetian red as a reliable preventive of chicken cholera. We frequently see the statement that if a small quantity of this red-colored earth is kept in the drinking water, it will prevent the ailment. Personally, we do not believe that Venetian red has ever prevented or cured a case of hen cholera. Often people become alarmed at an unusual looseness of the bowels in their poultry, and imagine they are affected with cholera, and dose them with Venetian red. This matter being heavier than the water sinks to the bottom, and the only benefit if any that can be derived from the use of same would be from the small amount of astringent matter that might be dissolved in the water; otherwise, Venetian red used in this way would have had no influence whatever over this ailment.

We are glad to note that the general tone of the poultry press is turning against the mixing of all kinds of material with the mash food of poultry, and compelling them to eat it. The way to feed grit, charcoal, oyster-shell and all heavy material of this kind is to place it in the grit-box, and permit the poultry to help themselves. This same influence is being used in favor of feeding clover, alfalfa and other like material in its natural state to the poultry during the winter months.

New England is the home of the Asiatic fowls, the Brahmas and the Cochins, the producers of the dark-shelled eggs. The Plymouth Rock and the Wyandotte are also great favorites there. They are the producers of dark-shelled eggs. The dark-shelled eggs are usually larger in size than are the eggs having the white shell. This size seems to have its influence both in New England and the local markets here.

An Addition to The Feather

It is a pleasure to announce that we have secured from Milton O. Adams the right, title, and sole interest in the paper published by him called "The Incubator." Mr. Adams has shown himself to be a most praiseworthy young man, and has connected himself solely with the incubator business of Hiawatha, which makes it impossible for him to have anything to do further with the publication of this paper. Notice of transfer is published below.

Know All Men by These Presents, *That I, Milton O. Adams, of Hiawatha, Kansas, for and in consideration of the sum of ONE DOLLAR ($1.00), do, by these presents, grant, bargain, sell, transfer and set over to THE HOWARD PUBLISHING COMPANY, their heirs and assigns, all my right, title, and interest in and to a certain publication known as "The Incubator," including the good will thereof, and the subscription list thereto,*

TO HAVE AND TO HOLD the same unto the said The Howard Publishing Company, its heirs and assigns, FOREVER.

And the said Milton O. Adams, does hereby covenant and agree with said purchaser, that he is at the time of the delivery of these presents, the lawful owner of property hereby conveyed, and has full right and title thereto, and that he will warrant and forever defend the same unto the said The Howard Publishing Company, against claim, or persons claiming the same.

Witness *my hand this 25th day of August, 1905.*

(Signed) *MILTON O. ADAMS,*
Editor and Manager.

Mr. T. E. Orr, secretary of the American Poultry Association, was unable to go to Buffalo last week, owing to a case of ivy poisoning which greatly inflamed his face and caused much pain. He will be around in time to supervise the shipping of the advance orders for the Standard of Perfection. From what we can learn, it will be several weeks before all the advance orders are distributed, as the latter has been larger than expected.

Mr. D. Lincoln Orr, ex-president of the American Poultry Association, stopped off a few days at Johnstown, Gloversville, and Fultonville, N. Y., to visit the fanciers there. He was rather surprised at the interest taken in thoroughbred poultry in this neck of the woods and especially pleased with the White Wyandottes, that seem to have outstripped all other varieties in popularity here. Mr. Orr is also on a tour of inspection of different grain mills and their products. He wound up the week in Buffalo attending as a delegate of a fraternal order, besides looking after some poultry and A. P. A. business. Notwithstanding the strenuous administration and stormy sessions of the old society during his regime, he has lost none of his sleep; neither has his weight fallen off to any great extent. He is still in the ring, scrappy as ever and will no doubt have a most interesting time when he meets his friends and enemies at the Hagerstown and Cincinnati meetings of the American Poultry Association.

Mr. Orr reports unusual success in raising this year's crop of chickens. He has nearly fifteen hundred White Wyandottes running about and enjoying the excellent pasture and forage at his farm. Besides this he has over one hundred Light Brahma Bantam chicks doing finely at several neighboring farms. He expects to be in a fine position to show a great string at New York in January.

Adrian, Michigan, is called the "Hagerstown of the West." It is a great progressive fall fair with a finely equipped poultry department. The latter was built up through the efforts of two fanciers, Geo. L. Albans and J. E. Holyoke, aided by the liberal management of Michigan's greatest county fair. The prizes are very liberal and competition is open to the world. The birds will be cared for by competent superintendents. The dates are September 25 to 29. Mr. J. E. Holyoke is the secretary of the poultry department.

The Lenawee County Poultry, Pigeon, and Pet Stock Association was organized November 3, 1904, with fourteen members and now numbers over one hundred active workers, and also has a good-sized bank account to its credit. The officers are Geo. L. Alban, president; Robt. J. French, vice-president; J. E. Holyoke, secretary; Gertrude A. Roath, Treasurer; L. C. Brittian, superintendent. The association has secured the Light Guard Armory at Adrian, Michigan, and will hold a big show January 2 to 8, 1906. Judges Jas. A. Tucker and J. W. Mulur have already been engaged and others are being corresponded with. Adrian, from its location, is naturally of easy access to Pennsylvania, Ohio, Indiana, Illinois, Wisconsin and Michigan, and there will undoubtedly be a large exhibit from these states.

The prize list of the great Hagerstown Fair is out. It is as liberal as ever in the regular premiums offered and larger in the special prizes offered. Premiums for single birds are: First, $3.00; second, $2.00. For pens, first, $5.00; second, $3.00. These premiums will be awarded to all varieties of poultry recognized in the American Standard of Perfection; also in turkeys, ducks and geese. The entry fee for poultry is 50 cents; breeding pens, $2.50. On all non-standard varieties the premiums shall be for first, 50 cents, and for second 25 cents. Pigeon prizes are: First, $2.00; second, $1.00. Entry fee for pigeons is 50 cents each. Entries close positively October 7, and all birds must be in the hall by ten o'clock Monday night, October 9, as judging commences at 8 a. m. Tuesday morning, October 10. The complete list of judges is as follows: Poultry, G. O. Brown, J. H. Drevenstedt, D. A. Nichols, J. Fred Crangle, Chas. McClave, Stephen T. Lea, A. A. Parker; pigeons, W. J. Stanton, Henry Tieman. The American Light Brahma Club will hold a meeting at 8 p. m. Thursday, October 12. The exact date and time of the meeting of the American Poultry Association has not been announced. This being the golden jubilee of the great Hagerstown Fair extra inducements and attractions have been provided. From what we can learn, the attendance of fanciers promises to be very large. Intending exhibitors who have not received a premium list should write at once to J. Frank Spahr, secretary of the poultry department, at Hagerstown, Md.

We regret that President Holden of the American Poultry Association will not be able to attend the meeting at Hagerstown, as he is engaged to judge at the Lewis and Clark Exposition, Portland, Oregon, the same week. Many eastern fanciers would have been glad to meet Mr. Holden and the opportunity was ripe at the Maryland reunion of fanciers. As President Holden will be in the chair at the Cincinnati meeting in January, the chances of the eastern fraternity to gaze on his smiling face are very remote indeed. At Rochester, N. Y.. it was Chas. McClave whom the Pacific Coast claimed as judge of poultry when he was expected to preside over the A. P. A. meeting there, and now those cruel boys out there deprive us of another shining light at an eastern meeting.

Dr. A. H. Phelps, of Faverolle and Lakenvelder fame, has bought a fine place of three acres in or near Glens Falls, N. Y., which he is equipping as a model poultry farm for his pets.

Our Hoosier friend and editor of The Inland Poultry Journal, Theodore Hewes, devotes several columns in the August issue trying to show why some members of the A. P. A. voted for New York and others for Cincinnati; also why one hung on the fence rail before falling off into the right pasture. This is really an interesting study, although a more complete and accurate account of the hows, whys and wherefores of sundry votes can be had by studying closely the official vote as sent in by Secretary T. E. Orr and published in the poultry papers. There is a great big "self" in more than one vote; unselfishness was evidently enjoying a vacation when some votes were mailed.

White Rhode Island Reds, like white blackberries, are waiting for an unappreciative public to accept them as something necessary and worth having. American Whites, however, may have a look-in. This is a midsummer tip to the manufacturers of new white breeds. We need a few more of the latter just to get up an excuse for several special meetings in the future, for the A. P. A. will be awfully quiet after all the Standard and Red business is over.

Entries for the big Lewis and Clark Exposition, Portland, Oregon, close September 10. Write at once to Harry H. Collier, Tacoma, Washington, for full information; or, better still, send your entries. Bro. Collier will take care of them in the most approved manner.

The special premium list for poultry, pigeons, pet stock and dogs issued by the Interstate Fair, Trenton, New Jersey, is at hand. It is, as might be expected, a strictly up-to-date book, showing most forcibly the progressive ideas of the management of this great fair. Entries in the poultry department are limited positively to one thousand, as only one bird will be allowed in a coop except where breeding pens are shown. Entries will positively close September 12, but should be sent as long before that date as possible. Birds not received by Monday noon, September 25, will be debarred from competition. The classification is very liberal, as are the prizes both regular and special. Mr. Walter S. Gladney, jr., Atlantic City, N. J., is secretary and superintendent of the poultry department, and all entries must be sent to him. He will be pleased to furnish premium lists to all intending exhibitors who have not received one.

Breeding fine fowls is like breeding fine stock of any kind. It takes good blood to produce its like, good care and feed to grow it and common sense to handle it

Gallery of Fame

MILTON O. ADAMS

NOW comes one of those lifelike characteristic reproductions for which our artist has become famous. The portrait of Mr. Adams herewith shown was taken from a vaudeville rehearsal at Indianapolis during the dual meeting of the Poultry Publishers Association and the Incubator Manufacturers Association at that city in July. Mr. Adams was elected secretary of the latter association, and is admirably fitted for the position. He is sales manager for The Hiawatha Manufacturing Co., Hiawatha, Kansas, manufacturers of the "Honest Injun" and "Hiawatha" incubators and brooders. The readers of The American Fancier will appreciate very fully this introduction to so amiable and energetic a representative of our western dominions.

successfully. Climatic conditions may to a certain extent influence results, but as a rule a skilful breeder can overcome them. One of the best illustrations in breeding thoroughbred stock successfully has been forcibly demonstrated the past decade and most emphatically so this year by the famous Hurricana Farm at Amsterdam, N. Y., the property of the great carpet manufacturers, Stephen Sanford & Son. The wonderful success of their race horses at the Saratoga meeting teaches an invaluable lesson in stock breeding, care and management of horses that will apply with equal force to all stock. It was founded on the rock of intelligence and perpetuated by the laws of common sense.

It has been a common belief among horsemen that the bluegrass region of Kentucky was nature's ideal spot for the growth and development of the thoroughbred racer. Many horsemen are of this opinion still. But old General Sanford quite a number of years ago refused to believe this, and in order to prove that as good, if not better, horses could be bred in northern or eastern New York started the now noted Hurrincana Farm, procured the best stallions and brood mares obtainable, paying strict attention not only to the ancestry of such but to the physical development and soundness as well. The stable, although a small one, has been a remarkable success, furnishing such great and unequaled racers as Chuctumuda, Rockton, Molly Brant and the wonderful two-year-old of 1905, Mohawk II. It is no secret to find the blood lines that produced such results; pedigrees tell that. What is of more importance is the handling and feeding. One of the striking features of the Sanford horses is their stamina and physical or muscular development. All this is due to rational laws in handling the brood mares and the proper feeding of the latter. The farm is full of the bluegrass sod, the mares have full run of the same winter and summer, but in addition a certain amount of oats—grown from selected seed on the farm—is fed. Pure water from an artesian well is used for all stock. The stables and stalls, instead of being stuffy, low-ceilinged boxes, are spacious and airy, well ventilated, kept thoroughly clean and disinfected, and come as close to open-air conditions as the rigorous climate in this section will permit. There is no coddling or forcing. The growth of the young stock is natural, the indoor covered track in winter affording abundant exercise for the colts that are to be trained for the summer campaign prior to the opening of the large open-air track in late spring. When the horses are shipped away to a race track the hay and grain grown on the farm is furnished them, and, as Mr. Sanford remarked, "The water would also be sent if possible." It is such absolute care in every detail, such strict adherence to the correct laws of breeding, absolute kindness in treating all animals, pure food and water and perfect hygienic conditions that have made possible what ninety-nine people out of one hundred believed impracticable and doomed to failure. If poultry raisers exercised the same care and intelligence, studied climatic conditions as thoroughly they could produce similar results in poultry culture. Like begets like; care and management does the rest.

The vote for judge of bantams at the Madison Square Garden (New York) Show to be held next January is now being polled by the National Bantam Association. The following candidates are to be voted on: H. J. Quilhot, Chas. M. Smith and Chas. Jehl. All votes must be in by September 15, the date of closing the vote. George L. Young, 349 Eleventh Street, Brooklyn, N. Y., is the secretary.

Tunbridge Wells is one of the big English summer shows. It will interest Wyandotte breeders in this country to learn that 136 pens of their favorites were shown there. The Silver-penciled and Columbians created a lot of interest and were much admired, especially the latter. Pigeons and Poultry says they are very taking birds, and will doubtless catch on with those fanciers who can keep them where the smut and smoke of the towns are unknown. Silver Wyandottes are reported as being not as good as usual, dullness of color being the chief fault. Goldens are ahead in quality, Yorkshire breeders making a strong showing. Whites were particularly good, and also numerous. Dorkings had a big setback, only one lone bird being on exhibition.

English fanciers are noted to be good feeders; in fact, there is a tendency in some quarters to overdo the feeding of chickens. As a rule, however, the condition of the birds is such as to command admiration, and a little light on this subject will not prove unprofitable. The Rev. J. N. Williams in Poultry and Pigeons of August 4 contributes several columns of timely notes, and among other interesting things remarks:

"You can not get size into half-starved flocks, nor into flocks that get plenty to eat, but not of the right sort. For the making of heavy bone and big frames I had abundant evidence in a large breeder's chickens some time ago that few things surpass cut green bone. It stands to reason that bone must contain the chemical elements of bone which, if they can be assimilated, must go to form fresh bone, and consequently big frames. Large horse-tooth Indian corn the late Henry Pickles used to swear by for putting size and flesh upon his Wyandottes. 'Henry' would plod away round with visitors like myself under a big load of double cans and buckets of mixed up meal, consisting principally of Indian meal and barley meal for his colored birds. I have no doubt that a little sharps, a trifle of oatmeal, a handful of bran would improve the mixture.'

In regard to feeding bantams, Mr. Williams writes: "They want keeping back in size, feeding sparingly. If hard feathered, they must have hard, dry food to produce feather, but such a soft food as shall not tend to increase their size. Boiled rice with a little bran is the staple food for soft-feather, small fowls given by a certain American physician who writes on the dual subject of production of diminutive size and plentiful feather. I have heard some English breeders rather gird against the same. Still, I noted that they were not breeders of bantams. Rice certainly won't make stature. It is of a rather astringent nature, and a little bran will doubtless correct this tendency." There is a poultrry breeder in Rochester, N. Y., who feeds large quantities of rice each year to his Rock and Dorking chickens with excellent results. He loses very few chickens, and his market takes all he can produce in the fall and winter. A little rice is a mighty good thing to have on hand in the chicken granary. In France boiled rice is used extensively as a preventive of diarrhea in chickens, and we believe the poultry breeder in Rochester we referred to claimed that as one of the chief virtues of this comparatively unknown grain. Cracked rice is not so very expensive, ranging from $1.50 to $3.00 per hundred pounds according to location. A little of it goes a great ways when properly mixed with other grains.

DATES CLAIMED

Secretaries are requested to report to us any show not listed below.

September 2 to 9, 1905.—Toronto, Canada. Canadian Exposition. A. W. Bell, Superintendent.

September 4 to 7, 1905.—Johnstown, N. Y. Fulton County Agricultural Society. Drevenstedt and Zimmer, judges.

September 4 to 8, 1905.—Orangeburg, N. Y. Rockland County Fair. Dr. J. T. Gilchrest, secretary.

Sept. 5 to 8, 1905.—Cambridge, N. Y. Andrew Riddell, Supt Poultry.

September 5 to 8, 1905.—Brookville, Pa. H. A. Emmel, Mars, Pa., judge. F. B. Henderson, secretary.

September 11 to 16, 1905.—Syracuse, N. Y. New York State Fair. S. C. Shaver, secretary. J. D. Jacquins, superintendent of poultry.

September 12 to 15, 1905.—Greene, N. Y. Riverside Agricultural Society. C. Winston, secretary. L. J. Hall, supt. poultry.

September 14 to 18, 1905.—Albion, N. Y. Orleans County Agricultural Society. L. H. Beach, secretary; H. P. Schwab, judge.

September 19 to 22, 1905.—Allentown, Pa. The "Great Allentown Fair." Harry Schall, secretary.

Sept. 25 to 29, 1905.—Trenton, N. J. Trenton Inter-State Fair. Walter S. Gladney, Jr., Sec., Atlantic City, N. J.

September 25 to 29, 1905.—Adrian, Mich. Lenawee County and Southern Michigan District Fair. F. V. Judson, S. W. Bennett, superintendents.

September 26 to 29, 1905.—Poughkeepsie, N. Y. Dutchess County Agricultural Society. Zimmer and Drevenstedt, judges. J. M. Booth, Secretary.

September 26 to 29, 1905.—Roanoke, Va. The great Roanoke Fair.

October 1 to 7, 1905.—Danbury, Conn. F. Borman, secretary.

Oct. 3 to 6, 1905.—Lynchburg, Va. Frank A. Lovelock, Sec.

October 10 to 13, 1905.—Hagerstown, Md. B A. Betts, Superintendent.

October 17 to 21, 1905.—Atlanta, Ga. Georgia State Fair and Atlanta Poultry Association. Drevenstedt, judge. Frank Weldon, Secretary.

October 23 to 28, 1905.—Birmingham, Ala. H. J. McCafferty, superintendent.

November 13 to 19, 1905.—Houston, Tex. Henry S. Fox, jr., secretary.

November 20 to 25, 1905.—Gloversville, N. Y. Fulton County Poultry Society. Stanton, Zimmer and Drevenstedt, judges. Jacob N. Blunck, Secretary.

November 22 to 25, 1905.—Holyoke, Mass. The Holyoke Poultry and Pet Stock Association. Messrs. Felch, Ballon, Shove, Pierce and Crangle, judges. Geo. Barnett, Jr., secretary.

November 24 to 30, 1905.—Charleston, S. C. T. J. McCarty, secretary.

November 25 to December 1, 1905.—Charleston, S. C. The Charleston Poultry Association. E. C. Voigt, superintendent of poultry. Dr. S. T. Lea, T. J. Marshall, judges. F. J. McCarty, secretary.

November 27 to December 2, 1905.—Erie, Pa. Northwestern Pennsylvania Poultry, Pigeon and Pet Stock Association. W. C. Pierce, judge; F. E. Thompson, secretary.

November 29 to 30, 1905.—DeLeon, Tex. R. T. Bowman, secretary. Savage, judge.

November 29 to December 2, 1905.—Dover, N. J. W. H. Bidgood, secretary.

November 29 to December 2, 1905.—Sanatoga and Schuylkill Valley Poultry and Pet Stock Association. Samuel Kurtz, secretary, Sanatoga, Pa.

November 29 to December 2, 1905.—Sanatoga, Pa. S. W. Knotz, secretary.

November 30 to December 2, 1905.—Danbury, Conn. Nichols, Drevenstedt and Card, judges. C. H. Brundage, Secretary.

December 4 to 10, 1905.—Sixth annual exhibition of the Fanciers Association of Indiana. E. A. Pierce, secretary; Theo. Hewes, president, Indianapolis, Ind.

December 5 to 8, 1905.—Walden, N. Y. Drevenstedt, judge. H. W. Millspaugh, Secretary.

December 5 to 8, 1905.—Leominster, Mass. Leominster Poultry Association. L. D. Midgett, secretary.

December 5 to 9, 1905.—Providence, R. I. W. J. Brown, Secretary.

December 5 to 9, 1905.—Wilkesbarre, Pa. D. T. Miller, Secretary.

December 6 to 8, 1905.—Aamo, Mass. A. W. Safford, secretary.

December 6 to 8, 1905.—Paterson, N. J. Jas. Haudford, Secretary.

December 6 to 9, 1905.—Waco, Tex. J. R. Davis, secretary. G. Knebel, judge.

December 6 to 9, 1905. Youngstown, Ohio. Mahoning & Shenango Valley Poultry Association. Chas. E. Watwood, secretary.

December 7 to 9, 1905.—Stewartville, Minn. Stewartville Fanciers Association Poultry Show. George D. Holden, judge.

December 7 to 9, 1905.—Marshall, Tex. K. A. Powers, secretary; Savage, judge.

December 8 to 9, 1905.—Elgin, Tex. A. J. Jarmon, secretary. R. A. Davis, judge.

December 11 to 15, 1905.—Montgomery, Ala. J. L. Hay, secretary.

December 12 to 15, 1905.—Monroe, N. C. Marshall, judge. T. F. Dillon, Secretary.

December 12 to 16, 1905.—Missouri State Poultry Association. H. P. Mason, Fayette, Mo., secretary.

December 13 to 15, 1905.—Kingston, N. Y. Drevenstedt, judge. F. E. Miller, Secretary.

December 13 to 16, 1905.—Blondon, Pa. E. G. Wilkinson, Secretary.

December 13 to 16, 1905.—Holland, Mich. McClave, judge. L. S. Sprietsma, secretary.

December 13 to 17, 1905.—Corsicana, Tex. C. C. Papsworth, secretary. Davis and Savage, judges.

December 14 to 16, 1905.—Temple, Tex. Mrs. E. W. Mathews, secretary.

December 14 to 16, 1905.—Rutherford, N. J. Rutherford Poultry, Pigeon and Pet Stock Association. E. J. Irwin, secretary.

December 18 to 22, 1905.—Long Branch, N. J. The Riverside Poultry and Pet Stock Association. E. C. Wainwright, Little Silver, N. J., secretary.

December 18 to 23, 1905.—Hazleton, Pa. J. E. Anderson, Secretary.

December 18 to 23, 1905.—Evansville, Ind. Wabash Valley Association. D. T. MacClement, secretary.

December 18 to 23, 1905.—Concord, N. H. New Hampshire State Poultry Association. H. C. Shaw, Milford, N. H., secretary.

December 19 to 23, 1905.—Cisco, Tex. A. H. Johnson, secretary. Savage, judge.

December 19 to 23, 1905. Concord, N. H. New Hampshire State Poultry Association. H. C. Shaw, Milford, N. H., secretary.

December 19 to 23, 1905.—Atlanta, Ga. H. F. Reils, secretary.

December 19 to 23, 1905.—Mohnsville, Pa. Geo. W. Hatt, secretary.

December 20 to 22, Cleveland, Tenn. A. J. Lawson, secretary.

December 25 to 30, 1905.—Mankato, Minn. Holden, judge. J. W. Kallmann, Secretary.

December 26 to 29, 1905.—Fremont, Nebraska. W. H. Haren, secretary.

December 26 to 29, 1905.—Marietta, Ohio. H. A. Emmel, Mars, Pa., judge. A. I. Spencer, Parkersburg, W. Va., secretary.

December 26 to 30, Aberdeen, Miss. A. Brannin, secretary. S. T. Lea, judge.

December 26 to 30, 1905.—Lititz, Pa. W. J. Stanton, Chas. T. Cornman, Frank G. Bean, judges. J. W. Bruckart, secretary.

December 26 to 31, 1905.—Oregon, Ill. Ogle County Poultry and Pet Stock Association. W. C. Pierce, judge; L. H. Valentine, secretary.

December 27 to 29, 1905.—East Palestine, Ohio. East Palestine, Ohio, Poultry Club. C. F. Early and Phil Feil, judges. Wm. Haught, secretary.

December 27 to 30.—East Greenville, Pa. W. Theo. Wittman, judge; C. A. Max, secretary.

December 27 to January 1, 1905-6.—Tacoma, Wash. Collier and Dixon, judges. Mrs. C. A. Pratt, Secretary.

December 29 to January 1, 1906.—Wallingford, Conn. New Haven County Poultry Association. D. A. Nichols, W. H. Card, judges; Wm. J. Hogan, secretary.

December 29 to January 2, 1905-6.—Toronto, Canada. R. Durston, Secretary.

January 1 to 6, 1906.—Nashville, Tenn. Tennessee State Poultry Breeders Association. John A. Murkin, Jr., secretary.

January 2 to 5, 1906.—Waxahachie, Tex. C. T. Spalding, secretary. A. B. Shaner and R. A. Davis, judges.

January 2 to 5, 1906.—Lynn, Mass. J. Fred Watson, W. B. Atherton, D. P. Shove, C. S. Flanders, judges; Chas. E. Hunt, secretary.

January 2 to 6, 1906.—New York. H. V. Crawford, Montclair, N. J., Secretary.

January 2 to 8, 1906.—Adrian, Mich. Jas. A. Tucker, J. W. Muluix, judges. J. E. Holyoke, secretary.

January 3 to 6, 1906. Cambridge, Ohio. Cambridge Fanciers Association. D. J. Lambert, judge. James C. Sarchet, secretary.

January 8 to 12, 1906.—Augusta, Ga. J. W. Killingsworth, Secretary.

January 8 to 13, 1906.—Evansville, Ind. H. J. Reims, secretary.

January 8 to 14, 1906.—Los Angeles. Mrs. O. K. Burbridge, Secretary.

January 9 to 12, 1906.—Middletown, Conn. W. J. Keift, Secretary.

January 9 to 14, 1906.—Dallas, Texas. Loring Brown, Kunebel and Purdy, judges. ———, secretary.

January 15 to 20, 1906.—Oshkosh, Wis. Wisconsin State Poultry Association. Charles McClave, judge. Frank W. Radford, secretary.

January 15 to 20, 1906.—Delavan, Wis. Southwestern Wisconsin Poultry and Pet Stock Association. Jas. A. Tucker, Thos. F. Bigg, judges; W. E. Piffer, secretary.

January 16 to 20, 1906.—Charlotte N. C. H. P. Schwab, judge. W. B. Alexander, secretary.

January 17 to 19, 1906.—Knoxville, Tenn. R. S. Porter, secretary.

January 18 to 22, 1906.—Auburn, N. Y. Auburn Fanciers Association. W. J. Stanton, H. J. Quilhot, Geo. W. Webb, Andrew Riddell, L. M. Hallenbeck, Clarence W. King, judges. Chas. E. Dalton, superintendent. J. H. Scott, secretary.

January 24 to 26, 1906.—Pittsfield, Mass. R. T. Kent, Secretary.

January 29 to February 3, 1906.—Cleveland, Ohio. The Cleveland Fanciers Club Co. F. L. Gruehl, secretary.

January 31 to February 3, 1906.—Hudson, Mich. The Southern Michigan Poultry, Pigeon and Game Fanciers Association. Jas. A. Tucker, J. W. Mulinix and H. A. Boies, judges; H. A. Boies, secretary.

February 19 to 24, 1906.—Pittsburg, Pa. Pittsburg Fanciers Club. Chars. McClave, S. Butterfield, G. O. Brown, judges of poultry. G. T. Erbe, A. J. Edwards, judges of pigeons. G. C. Sutch, secretary.

Squabs are raised in one month, bring big prices. Money makers for poultrymen, farmers, women. Send for our **Free Book** and learn this immensely rich industry. 83

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV Washington, D. C., September 9, 1905 No. 621

A Lesson Learned from Competitive Egg Tests

Several years ago the experimental branch of the agricultural department of Cornell University conducted a yearly egg test that embraced the management of about two thousand two hundred hens in the hands of four different parties. At the same time there was a yearly egg test being carried on in Australia. The hens in the New York State test all belonged upon the farms where they were managed, while in Australia the thirty pens of six each were gathered from all sections and placed under the care and direction of one man. The final result showed an average of about 129 eggs to each hen in these tests.

The following year, in Australia, there was gathered from all parts of the world seventy pens consisting of six hens each. These were managed by the same person who conducted the first egg test. Conditions were favorable and the results very satisfactory, the average egg production being 163 eggs for each hen, the total number being 420 hens divided in seventy pens. The winning pen in the Australian egg test of that year were the Silver-penciled Wyandottes and the poorest of the seventy was a pen of the same variety.

In the third and last test just completed, of one hundred pens of six hens each, the average of each hen was 152 eggs; the winning pen in this contest also being Silver-penciled Wyandottes. The Silver-penciled Wyandottes winning for the two years both belonged to the same man and were reared in Australia. This, the conductor of the test admits, was to their advantage. Every one will understand the terrible strain of shipping a lot of hens from different parts of the world, as from this country, seven thousand miles, to a new climate, starting from here in January to reach there in the fall weather of that climate, and to begin an egg test under conditions that brought about an extra molt.

The lessons to be learned from these tests are as follows:

First, the more experience one has in handling hens for a large yield, the better will he be able to manage them. Three years of this kind adds much to the information of the one in charge, which is shown by the increased egg yield each year. The decrease the last year can be accounted for in two ways—the larger number of hens lowered the average, and the unfavorable weather during the heated term of the summer in Australia. During this period, for a number of days, the thermometer ranged from 112 to 115 degrees, a condition of heat that poultry is never exposed to in this country.

Second, the fact that the same strain of fowls won the highest award both years proves conclusively that this is a fine laying strain and that it is a variety that has been well cared for and trained for the purpose. This is offset, on the other hand, by the fact that the test of a year ago had many of the same variety that did not do nearly so well as did the winning pen, proving beyond question that the real value of the egg-producing fowl is to have a strain of heavy layers. All having been handled and cared for alike they should have done equally well, if they had had the ability so to do; but the facts prove conclusively that there are good laying hens of all breeds and varieties, and poor ones as well.

It is quite natural to suppose that each one would select for such a test the hens that he thought would make the finest egg-producers from those that they possessed. Selecting their own in this way and sending them to the competition is proof positive that they wished to be represented in the test with their best. But having fallen short of the better breeds is satisfactory evidence that they did not have hens equal to the occasion.

Every allowance in the world should be made for the fowls sent from this country—the climatic conditions were so different and the disadvantage, as stated by Mr. Thompson, that the hens sent from America were too young to stand the strain of travel and of a large egg production. This remark would lead one to believe that Mr. Thompson favored older fowls for the strain of such competition, a conclusion strongly in favor of mature hens, well trained and bred for egg poduction; yet the winning pen was but 7¾ months old when the test began and the losing pen was 7½ months old at the same time. A peculiar coincidence in the present Australian test, as in the one of a year ago, was that the winning pen was Silver Wyandottes, pen 99 Silver Wyandottes, and the average of breeds or varieties in egg production placed the Silver Wyandottes, of which there were 108, in the fourteenth position for breeds and varieties. The highest average in breeds was to the Rose-combed Brown Leghorns, with Rhode Island Reds second, Leghorns third and Black Hamburgs fourth. When considered as a lot of ninety-six, the White Leghorns took third position as against twelve Rose-combed White Leghorns that took sixth position.

As before stated the lesson to be learned from these egg tests is the fact that no one breed or variety is much better than another, except when they are properly and carefully bred for the purpose. With six hundred hens, of twenty-two varieties, representing Leghorns, Rhode Island Reds, Hamburgs, Orpingtons, Wyandottes of five varieties, Langshans, Andalusians and other minor varieties in competition one must be persuaded into the belief that it is the breeding first and the care afterward that bring the best results. In the record of the hundred pens, all kinds and varieties are scattered throughout the list in different positions, as, for instance, the winning variety was first and next to last place; the Leghorns had second place and ninety-fourth place. All of which goes to show conclusively that it is the quality that counts, and not any one individual breed or variety.

POULTRY PLANT, STORRS, CONN.

Dampness

Nothing is so injurious to chickens, turkeys, ducks, geese and pigeons as exposure to dampness. By that is not meant the occasional exposure to the rain, but to living continually in damp places.

Houses that have damp floors and damp surroundings are almost certain to destroy the vitality of all fowls. It undermines their health and creates many kinds of diseases. One had better discontinue keeping any of these rather than try to grow them where they are compelled to live continually in dampness.

Even ducks, that love to paddle about in the mud and water, seek a dry, warm spot where they can be away from the influence of the damp and rest and plume themselves in comfort. Geese, that wade through the wet marshes for hours in search of their food, seek the highlands where they can be high and dry away from the wet. Chickens that are compelled to live continually in the damp places lay but few eggs, are infested with roup catarrh and have delicate constitutions.

The Season of Molt

It is quite as natural for the hen to shed her feathers in the early fall and grow a new coat to protect her and give her a good appearance as it is for the horse to shed its hair, or for the trees to shed their leaves. Nature arranges for all these things, so that the new plumage may come at the proper time and recover the body in place of the old feathers that look dull and unattractive and that are so worn and broken as to scarcely give protection for winter.

Nature has willed it that this change of plumage shall begin in the early fall and finish, if everything is normal, before the cold weather sets in. With birds who live naturally these feathers are dropped slowly and gradually. The wing feathers of the birds do not all fall out at once, for if they did it would deprive them of their means of locomotion. While the change is often rapid, it is not so quick as to injure the moving power of the specimen. With our poultry, which are kept in such an unnatural condition, it is often different, from the fact that they are not fed, kept and allowed to live in a way that would encourage nature to do its work properly.

The period of molt extends from thirty to one hundred days. There is no certainty just when it will begin, nor when it will end. If poultry is very poor and thin the molt is tedious and exhausting. Oftentimes the poor, thin hen will die from the exhaustion of the molt, and the over-fed fat he nis at times slow to cast her quills because they are so full of oil they do not dry up and drop out as they should.

There is a disposition on the part of many to hasten the molt. Many plans have been devised, among them the feeding of oily foods and other processes, but the one that seems to be the most successful and only one that we have known to be followed to great extent is what is known as the starving or close confinement process. In this the poultry are confined for from ten days to two weeks in hen-houses, which are quite warm, with but very little to eat. After the end of the confinement has arrived they turn the fowls out on green grass and feed them very strongly with a

BUFF PLYMOUTH ROCK

rich grain and mash-food ration. The starving process stops the egg yield, changing them from making eggs to thinking about and hunting for food. As soon as they are turned out and a full food ration is supplied them the tendency is for the feathers to drop out very quickly, and the strong feeding helps them to renew them in a very short time.

We have known some poultrymen to try this and succeed very well with it, while others have complained that it did no good, but we are of the opinion that wherever this method is properly applied and the hens, while confined, are fed just enough to keep them alive and in fairly good condition, then turned out and fed strongly, an earlier and quicker molt will be the result.

The drawback to this seems to be that it is necessary to have the houses close and warm where the hens are confined, and in stinting their feed if any eggs are laid they are apt to learn the egg-eating habit. If they take this up at this season of the year, just prior to the winter months, it is apt to remain with them and become a dangerous and unprofitable habit. When this is the case use either trap nests or nests that are so dark that one hen can not see another on the nests. Care and judgment must always be applied in these matters or they may prove injurious instead of beneficial.

In writing of the early molt question, Mr. Cosgrove states that it is possible not only to cause the old hen to shed, but the pullets as well by following this method, but that the method must be carefully and regularly applied and that when the hens are on short rations they must be watched that they may not learn any bad habits or begin to eat the young feathers as they come for the sake of having the blood.

Colony Coops

As soon as the young chicks are old enough separate the males from the females and colonize them. Colony coops are of great advantage about the poultry plant. A coop for the mother hen and chicks, large enough to keep them housed all summer, is splendid.

Egg Production

Every one is desirous of securing a full egg yield from their poultry. This is most desirable at all times, but it is very much against nature to attempt to force unnatural egg production. If poultry are in a healthy condition, properly housed and fed, they should produce a full complement of eggs; but no matter what the condition may be, there can not be anything gained in the long run from the attempt to force egg-production from poultry in an unnatural way.

When fall comes, your poultry may not have finished their molting in a proper manner. When this is the case all the forcing in the world will not accomplish the desired end. If, perchance, the fowls are too old to lay, no amount of forcing will compel them to do so. If the pullets are immature—not well grown—all the forcing in the world will not compel them to lay eggs. The way to have a good, profitable egg production, is to care for your poultry twelve months in the year so as to have them strong and healthy in the spring to produce the eggs for hatching, to keep them in a good healthy condition, not very fat during the summer months, so that when the time of molt comes around, they will be in proper condition to shed their old coat of feathers and take on the new. After this season of molting has successfully passed by, if they are in a healthy, vigorous condition, they should soon begin to lay.

When winter comes, if they are properly housed in good, warm houses, with a dry floor and plenty of litter—this means a foot or more of straw on the floor for them to scratch and dig in for their grain—they should begin to lay and continue to lay during the winter; but if they are neglected part of the time, and then an attempt is made to force them to do that which they are not in condition to do, failure will be the result of the attempt. A good supply of eggs is not a spasmodic occurrence; it is the result of good, even, careful attention of the matter for the purpose for which the fowls are kept.

BROWN'S BUDGET

An authority says: "It has been discovered that two hens fed with grain laid in a given time 127 plus sixty-seven eggs, while two hens of 'similar races' fed with raw flesh laid 167 plus 121. The respective totals were 194 and 297. There was superiority as to weight in favor of the eggs laid by the meat-fed fowls, their average being fifty-eight grams against forty-five grams for vegetarians." This is evidently a foreign item manufactured in this country. There are too many such floaters going the rounds of the daily press. The information on poultry disseminated by the daily press is generally of a startling character.

Growing chickens should have as varied a diet as can be made. They are making bone, flesh and feathers, and they call for good food combinations. No flesh diet or grain will answer unless they are with a combination. When there is a run on meadow-land or grain stubbles, where grasshoppers and other insects abound, there will be provided all the flesh necessary, and in combination with the grain and mixed foods provided and the pasture pickings the chicks will secure, they will more correctly balance their rations than man could.

Whether it is best to feed the mash or soft food in the morning or evening seems to be a mooted question. In cold, winter weather, when the nights are long, and in consequence there is a long time between evening and morning meals, soft food will digest a long time before morning, much sooner than grain. It is a question, then, if grain does not afford a more lasting sustenance, and a more pronounced and prolonged warmth such as is required in cold weather. When the weather is warm, between a late evening feed and an early morning feed is comparatively a short interval. Consequently it is all right to feed the soft food at night, and especially to the flocks that are allowed to go out from their houses at will at daylight.

The value of a night visit to the henhouse is not generally appreciated. It is not merely to be sure that every hen has been properly secured for the night. There are other reasons. Fowls that are ailing—in the very first stages of colds and other troubles—can in this way be detected, and remedies applied that will "nip in the bud" what would otherwise lead to serious and costly troubles. Go in first, either without a light or with the lantern with flame turned very low. Of course, it should be understood the affected specimen should be taken out and be cooped for treatment.

Doctoring fowls is folly if the sick ones treated are allowed to run among the flock. A sick fowl requires rest and freedom from all annoying sources, the same as a sick human being. No matter how clean the chicken premises are kept or how carefully all the food may be selected and prepared, in flocks of any size ailments will occur. For this reason there should always be light coops similar to those used in exhibitions, and some room or place to which the well birds can not have access, to treat the ailing specimens.

A reader of The American Fancier asks us, "What is the best plan for a house and yards for eight hundred hens?" Get a copy of "The Feather's Up-to-date Poultry House," and study it. You will probably find a design that will answer your purpose. The most satisfactory idea for locating house and runs is to have the house with runs front and back. This plan will enable you to have pasture assured in the growing season. The alternating of the flocks from one yard to another and the replanting of new crops keeps the ground from being contaminated. If you can not have runs front and back, the next best thing is to subdivide your runs and follow the same alternating plan.

How are the prospective show birds prospering? Are they coming up to your expectations? Have your selections been good object-lessons, such as to make the use of a note-book desirable as a reference for another season? Don't become discouraged. Constant mingling among the birds, and seeing them every day may cause you to conclude they are not "way up in G" as you expected they would be. Generally they are a little better in quality than you may consider them. You've had no opportunity to compare with others, and that makes a wonderful difference.

It is now time to make a reselection of the chicks and dispose of all the cockerels that are not of the quality you desire.

Frequently turn up the soil, making it fine, so the hens can have a fresh, clean dusting place. See how they will appreciate it. The chicks like such treats also. Shady places are most desirable, and you can not make the soil too fine.

Don't let the drinking vessels get slimy. Scald them out. Keep them clean. This advice has been given before, but some people need telling several times before they realize the importance of doing necessary things in the poultry business.

Air Castles in Poultrydom

Editor Couch, in "Vick's Family Magazine," calls to account the papers that pay unusual attention to writing up large poultry farms. He states that the persons owning stock on these large farms are pecuniarily benefited at the expense of the smaller brooder and advertiser. In other words, the glowing reports of these large places lead to the building of air castles which are likely to result in disappointment. The whole world at present seems to be interested only in large schemes rather than with reasonable propositions that can be worked out successfully and profitably by individuals. The daily press, the agricultural press, and the poultry press as well, is more or less tainted with this inclination, like the black man who said: "It's just as easy to say a big word as a little one, and out pops the big word every time." Instead of paying more attention to building up smaller enterprises and adding to the holdings of the individual, we are too apt to take off our coats and help to push along those who seem to have been more than usually successful.

PIGEONS

Money Made from Pigeons

We have been asked: "Do you think I can make money from the keeping of pigeons?" This is a problem little understood. If a person should raise and sell a hundred pairs of squabs for fifty cents a pair, they would have made fifty dollars. This would be a good remuneration from keeping ten pairs of pigeons for squab growing and should give a clear profit of twenty-five dollars. If one would call this a sufficient return, then they would be making money. But to imagine that a whole family can be kept from the sale of the squabs grown from fifty or sixty pairs of breeders, is absurd. Keeping pigeons, when properly carried on, adds to the income of a family. Those who love the feathered pets do better with them than do those who indifferently and carelessly simply keep a few for the sake of the few dollars they can make from them.

Pigeons, poultry, turkeys, water-fowls and bees are all a source of income to those who understand them and love to care for them. There is no other kind of business from which there can be so much money made from so small an investment as from this, properly looked after.

There is about five hundred million dollars or more of income added to the resources of the people in this country by growing poultry for eggs and for market and by breeding squabs, water-fowl and turkeys. This is a vast sum of money each year to be added to the income of this country. All of this goes to the people directly connected with the growing and selling of the stock. It is scarcely necessary to ask the question as to whether it is profitable. You have only to consider that more maney comes to us from the poultry and poultry products than is added to the wealth of the country from either gold mines or the wheat crop.

Notes

We are asked to recommend the best kind of a drinking fountain for pigeons. Nothing is better than the earthenware fountain for pigeons. Cast-iron fountains are very good; copper and zinc very bad. We should always prefer the earthen fountains.

Cover the floors of your pigeon houses either with dry earth from your yard or farm, or with dry sand. This makes a good resting place that is easily kept clean. Have a fine-toothed rake and go over it at least once a week, raking out the dirt. When necessary, pass it all through builders' coarse sieve.

Provide plenty of bathing water for the pigeons during the summer months. Do not be afraid they will bathe too often; it is good for them.

Pigeons are heavy feeders, especially when they have young in the nest. You must remember that one pair of pigeons must eat enough to satisfy four and to stand the strain of the work that accompanies the hatching and the feeding of the young. Some say that pigeons will consume one-half bushel of grain a year. A friend of ours who kept a careful estimate of a loft of forty pairs in a town, showed that it cost him about $1.25 per pair to feed his pigeons twelve months.

YELLOW TURBIT HEN

The finest specimens of Pouters, Carriers, Barbs and other short-faced birds are quite often unable to feed their young. Feeders should be supplied for the young of these specially choice varieties.

"How long can we depend upon our pigeons to be prolific breeders?" writes one of our subscribers. This differs in specimens, also in breeds and varieties. We have known some to fail after three years of age, and have had some do remarkably well when seven or eight years old.

Breeders in their second year will hatch and care for their young better than they will the first years. The young of a pair two years old and over are likely to be more vigorous than the young from a pair in their first season.

Young birds in their first season often neglect their young and let them die for want of food and proper attention. This is a failing that they are very likely to recover from after the first season. Do not discard a fine pair of this kind..

One or two unmated birds in a loft may destroy the entire work of a month by disarranging family affairs and breaking up the nesting places of those that have eggs and young. Look out for this.

Tumblers are one of the very best varieties of pigeons for beginners. They are attractive in form and color, fine in disposition, prolific breeders and cause considerable amusement to their owners when allowed to fly out in the evening.

We are told that hemp seed is one of the very best of stimulating foods for pigeons. Remember that a little of this goes a long way. It is a heating food and not good for either old or young during the hot weather, and very few grains to each pigeon as a tempting delicacy may safely be used.

Hemp seed with pigeons is like sunflower seed and other rich-stimulating food for poultry. It may be well to use it during the time of molting or when preparing for the show-room, but not as a general food.

Important Facts

The only cat that has to her credit the mothering of a brood of chicks is named "Feather." She is at Luna Park and belongs to Nones.

The entries for Allentown Fair close next week. Single bird entries, liberal cash prizes, two entries to fill, beautiful new buildings and coops, liberal management. H. B. Schall, secretary, Allentown, Pa.

We shall be glad to publish lists of awards on poultry at fairs, providing they are typewritten plainly on one side of the paper and sent promptly to this office. If it is not of enough importance to those in charge of the department to do this the blame must rest where it belongs.

The great Roanoke Fair, the state fair of Virginia, will be held during the week of September 26 to 29. Great preparations are being made for the display of poultry. Manager Cyrus T. Fox has in mind the best display ever held in the state of Virginia. They offer the cash, you are invited to go after it.

Look out for a good supply of alfalfa and clover hay for green food this winter.

Ginseng The money making crop. Easily grown. Room in your garden to grow hundreds of dollars worth annually. Roots for sale. Plant now. Literature free. Write today. BUCKINGHAM'S GINSENG GARDEN, Dept. E. Zanesville, Ohio. 620-629

Editorial Gossip

In one of our exchanges appeared the following statement: "Sawdust sprinkled on cement floors in poultry houses makes an ideal floor bedding." Sawdust is of no value whatever on the floor of a poultry house, for the following reasons: If food is thrown among the sawdust, the fowls are apt to pick up a considerable amount of the dust, which is far from beneficial to them. Whenever the fowls fly about, or jump quickly, it raises a dust and the small particles of wood gets into the eyes of the fowls or of those attending to them and causes considerable irritation and trouble. For these reasons, if for no other, sawdust should not be used. The best litter possible to have for a cement floor is short-cut hay, straw, alfalfa or clover. In addition to this, the chaff from the threshing machine where either wheat, oats, beans or peas have been threshed is good. Any vegetable grown matter of this kind makes a good litter for the floor. Sawdust sprinkled on a cement, board or dirt floor of a poultry house must always prove disappointing, as well as injurious.

Editor Mott, poultry editor of Nebraska Farmer, has some very timely hints as to the amount of poultry that should be kept upon a given space of ground. This is a question that frequently settles itself. We have known people to be very successful with a hundred fowls kept in rather small houses and upon a small plat of ground, while others have failed with an equal number on five times the space. The question of drainage, cleanliness, green food, shade and proper feeding has much to do in solving these problems. All poultry should have sufficient space whereupon they can keep well and healthy and free from all ailments that come as an inheritance from overcrowding and filth. Those who can do this on a small space of ground are fortunate in their management; those who fail to realize good results from ten times the amount of space prove conclusively that they are unable to properly care for their fowls.

In speaking of proper food for chicks, The Practical Farmer furnishes the following recipe: "Cornmeal, one part; ground sifted oats, one part; wheat shorts, one part; meat meal, one-half part; a little grit and fine shell. Mix in some unfertile eggs, and milk and water enough to moisten well. Bake slowly for two or three hours, rub this through a quarter-inch mash seive, and you have a splendid food for the young chicks." There is no question as to the value of this johnny-cake mixture; and the growers of poultry of all kinds who keep a few on their town lots or at home for winter eggs would find it greatly to their advantage if they would purchase a meat cutter or grinder and pass everything left from the table through this, and mix this with the meals, as above described, and cook them into the johnny-cake and feed to their laying hens. They would be more than repaid for the trouble. Of course, this could not be done where thousands of fowls are kept, but on small home places every scrap that goes into the slop can could be utilized in this way.

We copy the following from one of our exchanges: "It costs from $1.75 to $2.50 each to keep breeding ducks for a year. Soft food is their natural diet. Ducks have no crop. The food passes directly from the throat to the gizzard. Ducks begin to lay in the latter part of February or March, and continue into midsummer, giving a season of about six months. That it is a profitable business for some farmers is proven by the increasing number of duck farms in the country that average a product of from five to twenty thousand ducks per year." We rather think that the cost of food for the breeding ducks is a little overestimated. We have been told by those who keep a large number of ducks for breeders that it costs about $1.50 a year to feed a grown duck all he would eat, but that the breeding stock if properly kept for the best results would not cost quite so much. After the ducks are grown to three or four months old they are kept in the best breeding condition on much less food than would be consumed by them while growing. Besides the large duck farms that seem to dazzle the eyes of all readers, there are states in the Union that raise ducks for winter roasters, such as Iowa and other western states, that produce more roasting ducks in a year than are produced by the states that so largely breed the broiler duck.

The following is from The Northwest Farmer: "About thirty-five years ago the Danes looked upon poultry culture in about the same way as many a Canadian farmer now looks at it—as being a small matter to which the farm owner could not look with any good hope of large profits. The eggs were generally small, and in the home market, which was about the only market they had, commanded about half the price now paid for them. Previous to 1871 a few thousand dozen eggs were annually exported, but that did not draw the attention of the producers generally. In the year 1871 fifty thousand dozens were exported, and that started the boom in the production of eggs. In 1895 began the organization of the cooperative egg-producing companies, and since that time the industry has continued to develop mightily. In 1902 more than thirty-five million dozens were exported from the Danish possessions." All the foreign companies are paying more and more attention every year to the increased production of eggs. Every farmer, large and small, can produce a few eggs and some poultry for market upon their possessions. It is the united small production that makes the egg-producing business of the Danish country so profitable to them.

Statistics as quoted by the newspapers states that the cotton crop is valued at about $26,000,000 per year; that the united value of gold and silver is about the same; the wheat crop about $240,000,000, and tobacco and sugar combined, $55,000,000; while the value of eggs produced in the United States is over $300,000,000. The poultry growers of this country have never fully realized their position among the agriculturists of the land. We notice that the poultry farmers of the state of Missouri, after long-continued clamor, received a thousand-dollar appropriation from their state government in the interest of poultry. What would the state do if the word was passed around that the wheat, the oats, or any other of their crops was likely to be injured from some new cause? The poultry interest of the United States is the largest single agricultural interest next to the dairy business, and the poultry growers should demand as much recognition from the hands of the government, state and national, as does any other interest that we have. Do not be afraid to speak up. Make your wants known, and demand equal recognition with other interests.

The Washington Post states that Boston prefers brown-shelled eggs, New York, white; but that Washington does not seem to care what the color of the shell may be, provided the eggs are of good quality. The Post seems to overlook one fact, and that is that the egg market of Washington prefers the largest-sized eggs. The market quotations show that the largest-sized eggs, whatever the color of the shell may be, bring the highest price. New Yorkers have always preferred the white-shelled eggs. This preference seems to be from a delicate taste for the clear, smooth white shells. New Yorkers consume a great number of soft boiled eggs, and the dainty appetite seems to be better satisfied when these are turned out of the smooth white shell than from the darker kind.

Within a very few weeks the question will be raised, what can we do to have dry floors in our poultry houses? Dampness in poultry houses is the worst enemy of all to the poultry. There is nothing that destroys so many fowls as this, except filth and insect vermin. There are three practical ways to have dry floors in a poultry house. First of these is good drainage. When you can not have perfect drainage, elevate your floors through the filling in of a foundation of stone, brick or wood, with dry, sandy soil at least a foot above the ground level, and then make the best drainage away from this possible by banking up the foundation. Where this can not be practically done, a good cement floor should be laid that would extend several inches or a foot all around the floor of the house, and then fill dirt or dry sand in on top of this. Another way to have a dry floor is to build up a cement floor three or four inches above the ground level, lay in this cement two by four strips of wood, close and level with the floor. When perfectly set and dry, nail upon this a board floor, fill on top of this with dry earth or sand. The best method of having a dry floor is to build your poultry house upon a well-drained piece of ground that has a gravelly subsoil which will not harbor nor hold dampness.

Whenever any one speaks of water-fowl every one concludes instantly that they are thinking of the Pekin duck. The Pekin is one of the most, if not the most popular duck in the world. With the Pekin came the possibility of growing thousands upon thousands of broiler ducks even when plenty of water were not at hand. The Pekin has done a great work for the broiler duck business of the world. At the same time there are many other kinds of water fowl that meet some of the demands for market poultry better than the Pekin. The Rouen duck is perhaps the best roasting duck in the world; the Ailesbury stands next to these. For egg production the Indian Runner and the new Buff Orpington duck, as it is called in Australia, have the lead. The Blue Swedish duck can not be surpassed as table poultry. Any of these are likely to brood and hatch their own eggs. This the Pekin duck will not do. In selecting ducks use the same care and judgment that is used in the selection of poultry of other kinds. Select carefully the duck or goose for the purpose intended, realizing that all have their value and their unsurpassable qualities along certain lines.

The same attention should be given to the selection of geese. The Toulouse and the Embden geese are perhaps the best fitted for general purposes upon the farm, the Embden, the perfectly white goose; the Toulouse, gray in color. Either of these can be profitably kept on any farm. They are quiet, domestic and easily handled. The White Embden goose is largely favored in many localities because when plucked the white feathers seem to be more desirable for market purposes. Where thousands of geese are raised for market the cross-bred geese produced by mating the wild or Canada goose with either the African or the Embden or Toulouse seem to produce the largest and best selling young.

There was a statement made in The Washington Post a short time ago with reference to a Mr. Chas. Tate, a farmer of Greensporo, N. C., who had discovered a bacteria, which, when fed to poultry, increased both the size of the fowls and the eggs they produced. This matter has been referred to the Department of Agriculture here in Washington for an investigation. The result of this we shall watch and report the truth to our readers. Personally, we are not carried away with the idea.

The chaff from the threshing machine where the wheat, the oats, rye or the barley is threshed, if kept dry, will be splendid for litter in the hen-house next winter.

If a poultry house could be fully kept with one half alfalfa or clover hay, and the other half dry straw for scratching material, it would be ideal.

The fall fairs in the Empire State opened with an avalanche of feather pets at Altamont, Newark Valley and Cortland. The big strings were on hand but nicely split up so that every owner managed to get a slice of the melon.

"Billy" Greenman, secretary of the Cortland Fair, tried to make arrangements to get the Newark Valley strings of poultry to Cortland in time for the judging—Thursday morning—but the scheme failed to work. As there were about three thousand birds at Newark Valley and four thousand at Cortland the combined exhibits would aggregate nearly seven thousand birds. This would have been a physical, mental and moral task the four judges at Cortland could not perform in the time allotted, viz., two days.

It is just as well here to call attention to the mistake made by fair managers, i. e., the insane desire to hold the biggest show regardless of system, classification or uniform cooping. It is great picking of course for some of the big-string fellows but mighty poor satisfaction for the public and a fierce task for the judges to say the least. There is nothing educational about it. Visitors can not find out what the breeds are while the judges have a hard time to find the different entries, the latter being scattered in polyglot coops, cages and boxes here, there and everywhere. The exhibitors get their money and all they care about is the premiums they win. In hundreds of instances the premium cards are not even placed on the coops.

At Altamont there was a congestion of birds, such big strings as those of Minich, Sherry, Taber and others appearing on the scene. The tall sycamore of Schoharie, Clyde Proper, was the judge, but unfortunately he was taken ill after several hours hard work and compelled to go home, leaving several thousand birds unjudged. But the exhibitors got together and several were selected from their number and the work went on in a more or less unsatisfactory manner. It was another case of asking one man to do what at least three should have been required to do. There is ample room for real reform in the management of many of our county fairs in the state of New York. As the latter furnishes considerable cash to pay the premiums with the officers of the society can well afford to pay for the services of really expert and capable judges. This will insure the judging being done the first day and enable visitors to gaze upon the prize cards or ribbons as well.

Two county fairs within thirty miles of each other were held at Sandyhill, N. Y., and Ballston, N. Y., last week. This split up the Altamont strings and relieved the congestion at both. But there was a big lot of birds at Trumansburg, N. Y., nearly all the Cortland and Newark Valley strings being there.

Sandyhill had a few more birds than last year. The cooping and arrangement was as bad as ever. There was no classification and a certain go-as-you-please way at running things that made the work of the judge and the superintendent anything but easy. Had it not been for the help extended by exhibitors in bringing out their birds to be judged there is no telling what might have happened in the way of overlooking entries. Sandyhill is too good a fair and there are too many good poultry fanciers in that section to have the poultry department conducted on such antiquated lines. There are plenty of coops in the sheds and buildings. All that is necessary is a secretary of the poultry department who understands his business and a superintendent who will properly classify all exhibits. The present superintendent, Mr. Cooper, is all right if given a fair chance to get his exhibits in order. He is a conscientious and hard worker.

Walter B. Sherry, the hero of Stonybrook, Long Island, N. Y., who, like Patti, makes his farewell appearance on the circuit each year, was again very much in evidence at Sandyhill. He looks as young as he did ten years ago and has a string of birds that in quality and variety is considerably above the average. His pheasant and water-fowl entries are always attractive and high-class. He managed to spring a rather fine lot of Dark Brahmas on this trip, one hen in particular being a star in penciling and true in color.

"Doc" Mehring is also on the circuit with some high-grade birds, notably Light Brahma and Indian Game Bantams, besides a big lot of pigeons of good quality.

We were glad to meet Dr. Phelps, of Glens Falls at the Sandyhill Fair. The doctor is now located on a fine place right in the city limits, where he can raise his Faverolles and Lakenvelders in the most approved method. Although not making any exhibits at the fair himself a large number of odd varieties of bantams, Surrey Fowl, Rose-combed Blues and Frizzles were shown by the doctor's son. Several pairs of Frizzle Bantams were decidedly odd and attractive. Dr. Phelps will make quite an exhibit at Hagerstown, notably Faverolles and Lakenvelders.

Shepard Strong, of Manchester, N. H., is not on the eastern New York sircuit this time. Being one of Walter Sherry's first and best pupils in the show business, "Shep" has studiously avoided the big strings in the east and is doing the western New York circuit with success. He has the best string of birds out this season since he started in the show line.

It is reported that Mr. William Minich, of Carlisle, Pa., otherwise known as "Hamburg Bill," will have something pungently readable for the poultry press shortly. "Bill" has rather strong convictions, and also a way of expressing his displeasure at things that are not what they should be. He spent several days at Saratoga Springs imbibing the waters of that famous spa and will report in fine condition at the annual meeting of the Indians—Maryland Brand—at Hagerstown. Being known as "Scar-faced Bill" among the Indians, he will be allowed to state where he got the scars from and also what he knows about amateur and syndicate poultry judging.

Miller Purvis, editor of Poultry, has been selected to deliver the address in memory of the late John L. Cost at the big poultrymen's banquet at Hagerstown, Md., next month.

The only American Reds at the Hagerstown Show will be the White-faced Maryland Indians who will be there to mourn the loss of their big chief.

The first annual show of the Paterson Poultry and Pet Stock Association will be held at Paterson, N. J., December 6 to 9. There is no reason why Paterson, the Silk City of America, can not have one of the best exhibitions annually in that part of the country. There are scores of fanciers within a radius of twenty miles, besides hundreds in neighboring states and counties who can be depended upon to help the good work along. The association is fortunate in having Mr. Holden Rigby for its president, as well as other officers who are well qualified to make this first show a success. The state of New Jersey is one of the greatest in the production of fine poultry, yet has the least number of shows.

The poultry, pigeon and pet stock exhibition at Toronto, Canada, was opened to the public Saturday at one o'clock in the afternoon. The judging began as advertised, promptly at 8 a. m., and was completed in all classes at the time of opening the hall to the public. The same perfect system of cooping and numbering of the exhibits was in force, making clerical and other errors in entering and cooping impossible. The premium cards were placed on the cages as soon as the judge made his awards. When the judging was completed in each class, the envelope with coop number on was torn off and the entry card with name of variety and exhibition exposed to view. Not an exhibitor or anybody else, except the judges and clerks, were allowed in the building while the judging was going on. The roomy buildings, large coops, wide aisles and splendid light made judging a delight and caused more than one judge to remark: "Why can't such conditions exist at other shows?" To Dr. A. W. Bell, the superintendent, for this ideal handling of poul-

Gallery of Fame

E. B. THOMPSON

IT ISN'T often one meets with so great a success as has been achieved by Mr. E. B. Thompson, the "Ringlet" breeder of Barred Plymouth Rocks, and the sage of America, New York. The portrait shown herewith places him in the Shakespearian atmosphere where he loves to dwell. As a breeder and fancier of poultry he has reached the highest rung of the ladder, and his name is popularly known wherever poultrymen exist. The costume in which the artist shows him is his favorite one, for he loves "to make Rome howl" in more ways than one, especially in Barred Rock alley at New York. We are happy to introduce him to our readers. [Curtain.]

try exhibits, and to Charles Barber for his excellent management of the pigeon department, the credit must be given. They were masters of the situation at all times.

There were 2,160 single entries in poultry as against 1,973 in 1904. This is a remarkable entry and proves the increased interest taken in this famous Canadian national exhibition. It is needless to say that the quality in most classes was surpassingly fine. Of the birds on exhibition, reports will be ready for our next issue, when, also, a complete list of the poultry and pigeon awards will appear.

The Hon. A. F. Peirce, of Winchester, N. H., made his first appearance at Toronto as the judge of Games and Game Bantams. He was royally greeted by a very large entry and did his work in that thorough manner he is noted for. To say that he was surprised at the magnitude of this great exhibition is to put it mildly. The senator spent a whole day looking the Jersey cattle over and listening in the afternoons to the music of the famous Irish Guards Band, England's crack musical organization. Mr. Pierce remarked to us: "Had I known that such a great fair existed on this continent, I should have brought the whole family along. It is not only educational but interesting as well." As over six hundred thousand people attended this fair last year and the chances are that this number will be greatly exceeded this year, the popularity of this national event is manifest.

We have not a list of the American exhibitors at hand, but believe there was a larger number than at past shows, at least we hope so. It is up to some of our exhibitors in the American classes to make a showing at Toronto another year. It will pay them to do so.

Mr. J. W. Schieble and Mr. E. C. Ricker, of Scranton, Pa., made the trip to Toronto, and both were delighted with what they saw and the reception they received. Mr. Schieble had some of his famous Rhode Island Reds on exhibition and managed to capture one of the coveted bronze medals for best exhibit in very strong competition. Mr. Ricker was anchored in the Game Bantam alley, looking over the long line of fine Black Reds.

Mr. George Pan Burgott was in his element judging the Leghorns. He had a grand lot of birds to handle. George is looking remarkably well, and if he makes a few more trips to Canada will become thoroughly Canadianized. He and "Billy" Hannell are talking of starting a new railroad in Canada in the future with George as president, general manager, train despatcher and operator. "Billy" will look after the funds and the commissary department. They will run a special poultrymen's car during the show season it is rumored.

Mr. Sharp Butterfield, the Prince of Pilsen, came down from Windsor, Ontario, looking like one of those well-groomed managers of a big trust. The Bismarck of the fancy is growing younger and has lost none of his south-paw repartee. He can still argue on one side of a question and land a winner without using the spit ball. He informed us that he may depart for Europe next year and take up a slice of Yorkshire territory, build a house and spend the rest of his days in "Hold Hingland."

"Uncle Billy" McNeil and "Deacon Dick" Oke were largely in evidence at Toronto and entertained the "Melican" men in great style. L. G. Jarvis came down from Montreal and helped make things pleasant for all of us. The Black Minorca King, George H. Northup and Jarvis spent the long hours of the night together, talking chicken in the room at their hotel so that their neighbors on each side were regaled with stories of hackles, saddles, combs, lobes and feathered shanks until the dawn of day.

"Joe" Bennett judged all the Rocks at Toronto and did the job to the king's taste. Joe is a fine judge of Rocks and very careful in his work. He adheres strongly to type and knows the bluish cast of the plumage when he sees it. He will do considerable judging at Canadian shows this season.

Mr. John S. Martin made another great record with his White Wyandottes at Toronto. His old birds took nearly the entire lot of prizes. A good joke on "Jack" is that he sold a customer in Toronto one hundred eggs last spring, and this gentleman swoops down the Wyandotte aisles with a string of young birds taking the firsts away from the genial Jack. The latter smiled when he saw the cards up and remarked. "It's a pretty good advertisement for Jack Martin's strain of Wyandottes all the same." It certainly is. Mr. Martin sends out eggs from the yards that he uses eggs from himself. He will send an exhibit to the New York State Fair next week.

A large show will be held at Montreal the last week in January, 1906, so Mr. Jarvis informs us. A large association is being organized and a liberal list of prizes will be offered. There is no reason why Montreal should not have one of the largest shows in Canada.

One mistake occurred in the classification at Toronto, viz., Partridge and Silver-penciled Wyandottes competing together. They should compete separately. It is, as a rule, pretty hard for a Silver to beat a Partridge; besides the entries in both classes will be much larger, if allowed to compete separately.

We had an interesting chat with Mr. Newton Cosh, the well-known judge and breeder of Andalusians. Mr. Cosh is now located at Port Dover, Canada, and will, in a year or two, be in a position to take up the breeding of several other varieties of poultry on an extensive scale. He is very sweet on Columbian Wyandottes and believes they have a great future, especially when the plumage is up to the standard of a high-class Light Brahma. We are of the same opinion and hope to see a few good birds of this variety at Toronto next fall.

The story going the rounds of the daily press about a man out West hatching hen eggs in bee hives, is merely a revival of a "floater" that came from Germany and was published in the papers here in 1894. A bee in a bonnet will hatch out a presidential boom, why shouldn't they hatch hen eggs? A stinging denial will be necessary.

The way to succeed is to have better and better quality all the time. The only way to have the best is to get rid of the poorest and make room for their superiors. There is always plenty of room at the top, and the way to get at the top of the poultry ladder is by having nothing but the best.

Profits from Poultry

We are constantly requested to inform our readers as to how much they can make from keeping a hundred or more hens. In the egg-laying contest made in the state of New York, when 2,200 fowls were divided into four different flocks upon four different farms, the average egg production of these hens in the northern part of New York was 129 eggs to each hen. These were sold in New York on the Journal of Commerce prices, with a slight advance, and there was a profit of $1.56 made from each hen in the lot, not counting the labor. In the great Australian egg contest just closed, 600 hens averaged 152 eggs each. These were sold in Australia, making a profit of almost $1.60 for each hen, eggs sold in the market. In the egg-laying contest made in several localities in the United States, the average has ranged from 120 to 156 eggs; in one instance in which we have the records, 700 Leghorn hens were kept and cared for by a man and his wife, who made in return for their labor $1.48 from each hen.

These figures show what can be made from poultry that is kept for this purpose. What has been done by one person can be done by another. While this is an absolute fact, yet it is sad to relate that many people do not make money from keeping poultry, simply because their birds are badly kept and improperly cared for; and every one knows that no business will return a profit which is poorly managed, and that the reverse is usually true.

Poultry raising is a kind of business from which there can be a profit made only through good management. Within a week we have had related to us the experience of three people living in the same village, one having eighteen hens, one forty-five, and the other sixty. The one having eighteen hens secured from them during the winter months over nine hundred eggs. During this period of time the other two parties did not receive a single egg until after the first of February. All of this was the result of good management of the eighteen hens, and poor treatment of the other hens.

Too many people think that going into the hen business simply refers to buying a hundred hens, putting them into an old shed and feeding them corn three hundred and sixty-five days in the year with the hope of having a good egg yield from them. No one ever has gained a good egg yield from an all-corn diet, nor will they ever do so. One party kept three hundred Brown Leghorn hens in a large barn, and during the entire winter they were fed a ration of one-half corn and the other half cooked meat. This combination was an egg-producing ration; but if it had not been for the meat there would have been very few eggs from the corn diet. When you are after eggs from your hens, you must feed the food that will produce the eggs, and corn alone is not that kind.

What Others Think of Us

"I am taking more poultry journals than I have use for, but somehow The American Fancier fills a place that no other journal seems to hit. Enclosed you will find one dollar for subscription."—Jos. Shute, Meriden, Conn.

"Will you kindly take out our ad in For Sale column of classified ads. Everything sold. As an advertising medium The American Fancier is simply *it*."—Geo. W. Weed, East Lee, Mass.

"I have been a reader of The Fancier for a long time, and like it very much. I herewith enclose $1.00 for my renewal to same."—Joe S. Rutter, Newcastle, Pa.

"I have the latest copy of your paper and allow me to congratulate you upon the neatness of its new dress."—Fred Y. Farfrey, Richland Center, Wis.

Young's Strain S. C. W. Leghorns

I Have No Other Breeds

My strain, again for the 5th consecutive year, shows its superiority by winning more prizes at Madison Square Garden, New York, than all others combined, including cup, medal and four specials. Two weeks later I showed at Boston against the most prominent breeders of the East, winning nine prizes on nine entries over birds that won 1st at St. Louis.

I showed 2 Cocks, won 1st, 2d; I showed 2 Hens, won 1st, 2d
I showed 2 Ckrls., won 1st, 2d; I showed 2 P'l'ts, won 1st, 2d
I showed 1 Breeding Pen, won 1st

Also four specials. This record has never been equaled by any other breed or breeder in America. Stock for sale at all times. Eggs $3 00 per 15; $15.00 per 100. Address 44

BUFF WYANDOTTES

At Boston, Mass., Jan. 17-21, 1905, was held the Buff Wyandotte Club meeting which brought out all the largest and best eastern breeders and the largest and best exhibit ever made. **The Herald Square Winners** were there, the **Madison Square Winners** were there, and **Our Winners** were there and won their usual **Three Out of Five First Prizes,** making **Five Years in Succession** that we have won three out of five First prizes at Boston. This year we also won both second prizes where we lost the first prizes, as follows: **Cocks, 2, 3, 4, 5; Hens, 1, 2, 6; Cockerels, 2, 6; Pullets, 1, 6; Pen 1.**

Please note our record since 1897, given below, and remember this is the ancestry that keeps our train of this variety at the front, it dont cost any more than the other kind.

	Cock	Hen	Cockerel	Pullet	Pen
1897 New York	3	1, 3	2, 3	1	2

The American Fancier

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV Washington, D. C., September 16, 1905 No. 622

THE TORONTO SHOW

The annual poultry exhibition at the Canadian National Exhibition held at Toronto, September 2 to 9, was the largest in many years. The buildings and coops were taxed to the limit to accommodate all the feathered beauties, considerable doubling up being necessary in some classes. In the Asiatic classes, the Light Brahmas, while of fine quality, showed up twelve birds. The Dark Brahmas constituted a fine class of forty-six birds; Buff Cochins good with twenty-one enthies; Partridge Cochins numbered fifteen, Blacks thirteen, and Whites sixteen, with quality in each. Langshans made a respectable showing with thirty-three birds of good quality.

The American classes came out strong in Barred Rocks, twenty-two cocks, eighteen hens, twenty-five cockerels and thirty-three pullets being on exhibition; while Rocks numbered sixty-two, and Buffs twenty-nine entries. Wyandottes brought out the banner class in Whites, twenty cocks, twenty hens, thirty-two cockerels and thirty-seven pullets being cooped with fine quality in winning old birds and cockerels and pullets. Golden Wyandottes only three entries. Silvers, once a great class here, dropped to eighteen with good quality. Blacks strong with eighteen birds. Buffs a grand lot of sixty-three birds, the best exhibit we ever handled at Toronto. First cockerel and first pullet, a pair of beautifully-grown birds, even and correct in surface and undercolor, free from ticking or foreign color; winning cock and hen also high-class; in fact there was hardly a mediocre specimen in the class.

Partridge and Silver-penciled Wyandottes numbered only eighteen birds, both varieties competing together. Javas dropped to fifteen entries in eight classes, but the quality was there all the same. Games not very strong. S. C. White Leghorns numbered 104, a fine showing with plenty of quality; S. C. Browns brought out some stars in the fifty-eight birds shown, notably first pullet, a fine one in color and style. Buffs great in quality, thirty-eight birds being shown. Black Leghorns mustered but ten birds. Rose-combed White Leghorns twenty-one, R. C. Browns thirty-one. Only ten Spanish were shown. Black Minorcas had eleven cocks, seventeen hens, ten cockerels and ten pullets; White Minorcas one cock, five hens, six cockerels and seven pullets; Andalusians seventeen.

Silver-gray Dorkings were strong with fifteen cocks, twelve hens, thirteen cockerels and twenty pullets. Other Dorkings weak in numbers. Buff Orpingtons showed increased popularity as the excellent entries of eighteen cocks, twenty-one hens, fifteen cockerels and twenty-nine pullets indicate. Other varieties of Orpingtons numbered sixty-one. Houdans, Polish and Hamburgs were fine in quality, but competition rather restricted to light entries. Black-red Game Bantams numbered thirteen cocks, eight hens, seven cockerels, seven pullets. Ducklings, five cocks, five hens, two cockerels and nine pullets; Red Pyles were strong with thirteen cocks, thirteen hens, four cockerels and ten pullets. Golden Sebrights numbered sixteen; Silver Sebrights fine with thirty birds; Black Rose-combs, eighteen; White Rose-combs eight. Cochin Bantams had large entries, notably in Blacks, eleven cocks and thirteen hens being shown of the latter. Rest of Bantam classes fairly filled. Turkeys, thirty-nine; geese, fifty-six, and ducks 111; made up an interesting division.

A BUNCH OF ASIATICS

There was a great entry of pigeons and a good display of cage birds, aabbits and other pet stock. Below are the awards:

Nixon & Co., Indian Games; H. A. Hoffman, Orpingtons; Geo. A. Tossey, Light Brahmas; H. Wyatt, Buff Cochins; C. A. R. Tilt, Langshans; A. Bogue, Dorkings; W. G. Murray, Cochins other than Buff, White R. C. Leghorns, Brown R. C. Leghorns and Black Leghorns; I. K. Millard, Barred Rocks; G. A. Ionson, Buff Rocks; R. J. Schelley, White Rocks; H. Dunn, Minorcas; G. & J. Bogue, Spanish or Andalusians and Black Wyandottes; F. E. Wray, pen Wyandottes; E. Jeffries, Buff Leghorns; Wm. McNeil, Hamburgs, solid color, and solid A. O. V. Bantams; R. Oke, Hamburgs, partycolor; R. & G. Graham, party-colored bantams; Geo. Bogue, French.

Spread of Cholera.

We notice a very interesting article from the bulletin of a Californian experimental station. In speaking of the spread of cholera, they state that this and other infectious diseases may be spread about in ways not always considered. This is brought strongly to mind at the present moment because of the fight against the mosquitoes of the South to prevent them from spreading the germs of cholera throughout the land. Pigeons flying about, sparrows in the same way, as well as mosquitoes and flies may carry infectious diseases among your poultry. The presence of the English sparrow flying about may bring the gray louse and the red mite to your often-cleaned bird cage that hangs in the window. The casting of a dead fowl by the roadside may spread the infection of cholera to your neighbor's flock, or the putrefaction of that meat may spread the scourge of cholera.

BROWN'S BUDGET

"Now they are off. Here we are again. A big string, a full carload, and the fall shows are on at the agricultural fairs. With the old fowls in a ragged condition and the on-coming youngsters in the gawky stage, the judge hasn't any bed of roses or plain sailing. It's more difficult to judge the fall shows than it is the winter ones.

Not all of the agricultural fairs pay attention enough to having sufficient ventilation at night. The birds are cooped rather closely, and the exhibition halls are crowded. There should be plenty of openings high up in the building so the vitiated atmosphere can readily escape, and in some instances slatted doors could well replace the solid doors when the building is closed for the night.

Rockville started the Maryland circuit and it was a good show excellently managed. Mr. Calvin Hicks, the energetic superintendent, hustled the two judges along in an expert manner and the consequence was the judging was completed and prize cards all up on the coops before 1 o'clock of the first day. That's the way to do it.

The following week, at Tolchester Beach, Md., a sort of Coney Island resort reached by steamers, an agricultural fair was held in connection with the regular attractions, and no extra charges to the visitors. The poultry department was one of the leading attractions, and Hoke & Son, of York County, Pa., had a big string and hardly any competition. Poultry shows have been held at Atlantic City. Why not then at such kindred resorts? They are educational in all places.

In some of the poultry papers are accusations of alleged funny judging by "certain" judges, In justice to all judges and for the general good of the fraternity these charges should never be made unless the names of the alleged guilty parties are mentioned.

Don't borrow birds or hire them for exhibition. There is no honor in such a transaction for any of the parties concerned.

The outside critics of the American Poultry Association should join and attend the meetings and then uncork their unbounded wisdom. They would then receive more attention because of the belief that there is wisdom in a multitude of council. Facts are stubborn things and it is easier to criticize than create.

The associations and fall fairs should offer special inducement to women fanciers. It is pleasant to have them around the poultry shows, taking a keen interest in the display. Their influence is always good and every true fancier is proud to honor them.

In the South the number of poultry shows that are scheduled for the coming season is larger than ever. It is pleasant to note that there are now poultry breeders in the Southern States who breed as fine specimens as do the poultrymen of the North. In fact the time has arrived when there is no North, East, South or West in poultry raising. This is a big country, but the railroads are distance annihilators. Hundreds of miles are journeyed to visit a poultry show and is only considered one of the natural events.

The conditions that govern the production of winter eggs are mainly made in the summer and fall. A flock that is neglected during these seasons can never be forced by extra feeding in early winter to get results that would equal a flock properly cared for. It always pays in poultry raising to give attention to the flock in a way that will not only supply their present requirements but that will also in a sense be preparation for the always approaching other season.

"Will meet you at Hagerstown" is a sentence in a good many of my letters nowadays. Follow the crowd and send your birds on ahead. The spirit of our late John L. Cost will hover there, and many a sigh of sorrow will come from the breasts of fanciers when they are sojourning amid the familiar scenes of the mountain city.

The specialty clubs have caused their respective breeds to greatly improve in quality and to become popular. Without the aid of the clubs some breeds would never have reached the high notch they have. The clubs have also caused larger displays in the shows and better quality is also the rule.

Remember the hens like sunflower seed before it is dead ripe. Pick some heads as soon as the bloom readily rubs off the seed head. Cut them from the stalk close to the back of the head so the heads will readily lie with the seed side uppermost, and see how the hens will enjoy picking out the seed.

Increase the accommodations for the chicks now and separate the sexes. Unless the runs have an abundant supply of green food it should be supplied. Green food and insects are at this season generally to be found in the same place. Feed a greatly varied diet and feed several times a day, but only a little at a time, where there is lack of green-food pasture to keep the chicks employed between meals.

All poultry displays in agricultural fairs should have prominent signs displayed over each of the various breeds. The object is to let every one know "which is which." If one will listen to the passers-by in the poultry house at a fair it will be quite an astonishing revelation to hear what some of the most well-known breeds are called. He will hear names of breeds fanciers never heard of.

Don't let the equinoctial catch you with your colony houses and other buildings out of repair. Get the repairs made before they are needed.

A SUCCESSFUL ORGANIZATION

Throughout the entire country there is a strongly increased disposition for keeping poultry plants for profit, and adding to the income of those who must make their own living. The inquiry is so common as to how best to make a start as to make it an important question for the consideration of writers, many of whom have studied the proposition carefully.

Of all the combinations that may be made on a small piece of land, nothing seems to be so promising as the union of poultry, tree-fruits, squabs and bees. This kind of an organization can be successfully and profitably conducted on a small farm. If the land is large enough for the poultry department and the bees and the fruit to be in separate locations, it is best. Necessarily the bees must be kept off to themselves, but where they must be kept rather close together the poultry and the squab houses may be built on one side or part of the farm, while the bees and the fruit trees will have possession of the other. The land where the fruit trees are grown may always be used for the hens and the young chickens in the spring of the year, and for the whole flock of poultry as well so soon as the fruit crop has been marketed.

Plums, pears, cherries and apples can be successfully grown on a farm of this kind. Small fruits may be added if a fence is built around them to exclude the poultry. Gardening of all kinds may be managed in the same way, but poultry, small fruits and garden stuff do not seem to thrive when together. It is just as natural for the chickens to scratch the garden and eat the fruit as it is for them to live, and when they do this, it is destructive to both the fruit and the garden. For this reason, to be successful with the small fruit and the garden portion of the farm, they must be fenced in so as to keep the poultry away from them.

Keeping bees upon a plant of this kind may be regulated in several ways. One of the most successful farms that we have ever visited was a large garden spot in which were grown currants, gooseberries, strawberries and all kinds of garden stuff. Throughout this enclosure were hives of bees so placed as not to interfere with the fruit, and those who attended them did not seem to have any difficulty in going among the hives and the bees to attend to the fruit, the bees and the garden stuff. This enclosure was within fifty feet of the dwelling house. On the other side of this, one hundred feet away, was the enclosure for the poultry. Some farmers who raise bees on a fruit farm where poultry is kept, line the beeshives along the fence around the edge of the fruit orchard. To care for bees most conveniently the hives should be grouped in stockinets in some desirable location where there is sufficient drainage and sunlight.

A combination squab and poultry house can be built with the poultry beneath and the pigeon loft above, provided there is a solid, close-fitting floor between the two. This is best built out of two layers of flooring. When the first is laid saturate with hot tar; spread over this several thicknesses of tar paper; saturate this thoroughly with hot tar, and as soon as it is cool, nail on the top floor of matched flooring. This will make a good, tight, dry floor through which there can not be the slightest communication. When the pigeon-house is built in this way there should be an enclosed flyway, with a door on the south side of the pigeon house, and an open flyway ground on some other side where the pigeons can occassionally fly down to the ground without intermingling with the fowls. When the flying pigeons are allowed to interfere with the poultry neither seems to prosper as well as when separated.

Although there are a number of farmers who keep poultry and fruit, a few who keep poultry and squabs, comparatively few have the combination of the four, yet there have been sufficient trials made of this combination to satisfy those best informed as to the value. Those who contemplate building a plant of this nature should never venture into it over-expensively. Go slow and build up from small things. In this way you will gain the experience, increase your plant and gradually work up a large, profitable business without the expenditure of a large sum, and without the disasters resulting from an attempt to manage a large plant without the proper experience.

In selecting land for such a plant never choose low or marshy ground; select the higher, better-drained places and always consider carefully the requirements for the fruit trees. Find out from the state horticulturist as to the likelihood of the fruit doing well in the locality before venturing into such a combination, for wherever the fruit will do well the poutry, squabs and bees will prosper; but if the place is not fit for the successful growing of fruit, there will be many disadvantages for the other three.

Such an organization, properly handled, provides an income from fresh-laid eggs during the winter months, and a poultry supply to sell to the market throughout the entire year, using the eggs for hatching in the spring when cheapest. The squabs always sell well at that period of the year when most easily grown. The honey from the bees is in constant demand, if of good quality, and the fruit finds a ready sale when it is ripe. The advantages to be gained in the proper selection of the location is the profitable part of having your crops ready for the market earlier than those of your neighbor's, for properly selected land puts ripe fruit into the market several days or a week ahead of that grown in less favorable localities.

Cleanliness is next to godliness, but even that must be aided by a dry interior and something to kill the lice.

WHITE LEGHORN COCK

The Show-room

We noticed a query in one of the papers a short time ago as to whether the showing of pigeons had a tendency to lead a young man into trickery. Why not add, "Has the going to school a tendency to teach a young man bad habits?"

When any one is continually looking for trouble they will find it, usually, in fact, over ninety per ct. of all those who make a practise of exhibiting in the show-room are genteel fanciers. If a single individual is detected in what is called "fake," every single paper in the country seems to take pleasure in making capital out of it. On the other hand, very little is said of the thousands of honorable, upright followers of the show-room.

We see in the daily press records of vice among the clergy and all kinds of people, but in spite of all this scarcely one in a thousand of all these do wrong. The same is true in exhibiting poultry and pigeons. So very few have ever been detected in fraudulent conduct that it is absurd to mention it.

If one is anxious to get into trouble all they have to do is to fake and cheat, and they will get it. On the same lines they may depend upon it they will gain the ill will of their fellow-fanciers and soon be ruled out of the show-room. Honesty is the best policy in all kinds of business, and there is no place in the world where trickery is so quickly detected and exposed as in the exhibition room.

Limberneck

In all our experience in poultry writing we have never had so many applications for a remedy for the relief of limberneck. It should be thoroughly understood by this time that this miserable disease comes from the fowl being poisoned by eating putrid meat and the maggots found on it. The large number of requests for relief from this is indicative of carelessness in allowing dead animals or putrid meat to lie about, which is likely to destroy not only the health of your poultry, but of animals and human beings as well. If we might have as rigid sanitary inspection upon every acre of ground as is imposed upon the dwrllers of all large cities the rural districts would be almost absolutely free from loathsome diseases.

SURE ROUP CURE

Best remedy for **Roup, Colds, Canker, Pip, Sneezy** and **Difficult Breathing** in all its forms. Simply put in drinking water—the fowls take their own medicine and cure themselves. No bother. No other just as good. Cure guaranteed or your money back in 30 days if you're not satisfied. One package makes many gallons of medicine. Prices **25c, 50c and $1.00; sent postpaid. SURE EGG PRODUCER** makes hens lay. Only **one teaspoonful** needed **once a day for 30 hens.** By mail 35c. Agents wanted. Liberal discounts. Order eggs now from (1st Rochester) Rose Comb Rhode Island Reds for next spring. A few settings at $2 and $3.

Editorial Gossip

The editor of the Reliable Poultry Journal quotes two paragraphs from the editorial pages of the August Feather with reference to the secretary of the American Poultry Association influencing votes and states that in the interest of a square deal he asks this paper to publish our evidence.

We have had our say, Mr. Curtis. We are classed as a conservative publication. Seldom, if ever, do we make a statement without evidence. If the secretary of the American Poultry Association claims prior to or during the Hagerstown meeting that he did not attempt to influence votes for the Cincinnati meeting we will present to the meeting, where it properly belongs, if anywhere, the evidence that we possess. Otherwise we have finished with the matter.

While the matter is up we have just another word that might be classed with the above, and that is that we are surprised at the amount of interesting matter gleaned from the pages of this journal by the editor of the Reliable Poultry Journal, as published in the September issue. While opposed to so destructive a firing-line under cover, we are also glad to find that it seems to have attracted so much attention, proving, as it does, the wide extended influence of this publication we are now working so hard to place in the position where it properly belongs, on top.

We are also pleased to notice the instructive information coming from Artist Sewell, as the result of his visit to the Royal Agricultural Show in England. Our correspondent over there writes us of the pleasant experience of meeting Mr. Sewell. Those having the opportunities that have come in Mr. Sewell's way are in the most enviable position from the fact that they have seen so much that can be used to alvantage for the instruction of others.

Editor Heck, of Successful Poultry Journal, makes a ten-strike in the current issue of his paper when he suggests that it is important that the breeders should get together on points of excellence in poultry as well as the judges. He draws the line very fine and to the point when he states that a dozen of the most successful breeders of Barred Plymouth Rocks could never get together on a class and yet they find fault with the judges for not doing so.

Fowls and Eggs, a poultry paper published at Cape Town, has the appearance of great business thrift. We notice quite a number of our American manufactures advertised in this. The editor having heard of The Feather and The American Fancier wishes to add to his list of good things The Feather's publications on poultry and squabs. This business incident shows conclusively the far-reaching influence of our publications, which fact should not be overlooked by any one.

We are glad to inform our readers that a portion of our orders for Standards for both The Feather and American Fancier have been mailed. These are being sent direct from Buffalo as fast as our turn comes in proportion to the orders received. We are led to believe that all orders sent to these two papers will be filled by the 25th of September.

Poultry News, which was started several years ago by Mr. Williams, of Brunswick, N. J., has been removed to Newark, N. J., this gentleman having formed a partnership with Mr. John Engel, jr. Mr. Engel has, for many years, been a patron of the advertising columns of The Feather. He is a practical printer and a well-informed poultryman. This union of ability should prove of benefit to Poultry News. Mr. Williams is an energetic hustler for business.

In the current issue of White's Class Advertising will be found a sample of the excellent work that can be done by these people in the shape of a new advertisement for The Feather and The Fancier. In addition to this they copy in their pages from our "Gallery of Fame" the picture of Mr. Kimmey. The general opinion throughout the country seems to be that the artist outdid himself in the perfect delineation of every feature of Mr. Kimmey's attractiveness.

Mr. W. Theo. Wittman is in charge of the poultry exhibit of the great Allentown Fair, as superintendent. Mr. Wittman, as a breeder, writer and poultryman, has proven himself to be a success. We shall hope to see him branch out and make Allentown to Pennsylvania what Hagerstown is to the southern section of the country as a poultry exhibition and a gathering place for the fanciers. There is no place better located for this than Allentown, and Mr. Wittman has the ability to make Allentown a greater success.

Mr. J. Howard Sledd, of the Industrious Hen, is making a masterly effort to improve and advance the poultry interest in the South. This is very commendable. Without question the next advanced movement in poultry culture will begin in the South. The land, the climatic conditions and the people are ready and well suited to this line of agricultural work. If the state authorities in that section of the country would be more liberal to the live-stock interests and encourage the cultivation of poultry as they do their other agricultural pursuits, more profitable advancement along these lines would be made.

We have an invitation to be present in New York Thursday evening, September 14, to dine as the guest of White's Class Advertising Company in honor of Mr. Harry H. Charles, the new vice-president of the company in charge of their New York office. Mr. Charles is well known among the poultry fraternity and we extend to him our hearty good wishes for unbounded success in his new position.

Leslie's Weekly and Success have both made very prominent in recent issues poultry raising in the United States. The article in Success, while being largely rewritten from the census report of 1900, makes interesting reading to those not thoroughly well acquainted with poultry matters as they exist at the present time. Straws show which way the wind blows. When such large illustrated journals take hold of matters like poultry and squab growing, the people at large may rest assured that the success of the business is permanently established and on a solid foundation. We know of no other live-stock interests that have attracted equal attention in both the daily newspapers and the monthly illustrated papers as the poultry and squab business.

We regret to learn that turkey growing in some localities during the past season has not been successful. We have attempted to learn the cause of this, and are satisfied that more than one-half of it is due to lack of vitality and strength in the parent stock. There was just as much wet and hot weather throughout the country fifty years ago as now. At that time the woods were full of wild turkeys. To-day damp, wet and heat quickly destroys them, proving conclusively the lack of vitality and vigor in the poults. The one great remedy for all this is a determined effort to improve the vigor and vitality of the stock through constant and continued intermingling of new, strong, fresh blood with the home stock. When this has been thoroughly accomplished there will be but little trouble in growing turkeys.

The question of caponizing is being strongly considered throughout the western country. It is stated that capons bring during the early winter months about twenty cents per pound, and that cockerels of all kinds should be caponized and used in this way. Plymouth Rocks, Buff Cochins, Langshans, Games and Wyandottes have all been used in these experiments. Kentucky seems to be one of the coming centers for the growing of capons.

In connection with the capon business, our experience is that capons are most profitable after the first of February. During Thanksgiving and the holiday season turkeys, ducks and geese have the most ready sale. We have purchased in the New York market during these months capons at from eighteen to twenty cents per pound. After the first of February these conditions change, and we have known capons to sell for from thirty to thirty-six cents per pound at retail during February and March.

We are pleased to note in one of our exchanges the experience of a breeder in Indiana who has used chicken hens exclusively for raising geese. The old geese are plucked every six weeks; the feathers being in good demand are sold at sixty cents per pound. The old geese are not permitted to hatch and rear their own young, the eggs being hatched under the large-size chicken hens and the goslings kept with the hens until large enough to shift for themselves, when they run with the grown flocks. These poultrymen claim that there are but two profitable breeds of geese for this purpose, the one the Embden and the other the Toulouse. The Embden are preferred in that locality as the white feathers sell for considerably more per pound than the dark ones.

Mr. Sarty, of Missouri, in reporting his poultry account for the last seven years, shows a gradual increase in profits that is very satisfactory. His business has grown to proportions that now give him a little over three times as much profit as it did when he began seven years ago. The only way for a beginner to make poultry raising profitable is to begin with a few, and gradually increase the number until you have a flock of large size which you are able to handle successfully—the result of experience gained through their handling.

The opening of the fall fairs of the south at Rockville during the week of August 22 was a large success. Exhibitors came from as far north and west as Pennsylvania and as far south as Georgia. The quality was good, management all right. The show was properly classified. This is to the credit of the management. Cortland, New York, opened the same week with a record-breaking display.

We are pleased to announce the pleasure of having received an invitation to attend the banquet of the stockholders of the great Hagerstown Fair, given the 14th instant at Hagerstown. This was a token of special honor to the golden jubilee to be held in Hagerstown the week of the 10th of October. In the same line we acknowledge an invitation to attend a banquet of White's Class Advertising, New York City, the same date, the latter given in honor of Mr. Charles, the new representative in charge of the New York office of White's Class Advertising. We are informed that a most enjoyable time was had by all present at both of these gatherings.

With Regret

When one attempts to do a nice thing and then to have it all spoiled by an uncontrollable condition there is no way out but to hold up both hands and surrender. Every one in the world, our proof-reader excepted, knows full well that Mr. E. B. Thompson, the Ringlet King, lives at AMENIA, N. Y. Yet in the face of this we were compelled last week to say that Mr. Thompson lived in America, N. Y. But, never mind, the Ringlets would win just the same if in Japan or Russia, and a residence in America can not injure any one.

The annual fair of the Fulton County Agricultural Society at Johnstown, N. Y., is one of the great events, as far as the poultry exhibit is concerned, in the Empire State. Being strictly confined to entries of residents of the county, the magnitude, as well as the quality of the exhibits, can only be realized by witnessing the same in person. We honestly believe Fulton County, small as it is in area, to be the banner county, as far as variety and quality of birds are concerned, in the United States. Over twelve hundred birds were on exhibition and although several big strings were on hand, the majority of exhibits were from local and smaller breeders.

The members of the Adirondack Poultry Club and the Fulton County Poultry Association were all represented by choice birds and the rivalry was spirited and keen in nearly all classes. The judges, Zimmer and Drevenstedt, had several days' work placing the ribbons. The veterans, B. W. Mosher and Frank B. Sutliff, handled the exhibits in their usual good form. The building and overflow stand were crowded with interested visitors and fanciers, in fact the poultry show was the real feature of the fair. It augurs well for the winter shows to be held in this section later on.

The American classes were well filled, Barred Rocks bringing out some very choice hens shown by the veteran, John C. Rice, who also had a fine pen of chicks. Mr. Ellis, a newcomer, had a fine pen of old birds and a splendid male in the first cock. The Buff Rocks of Putman and Jacob Blunck were sound in color and good enough to show anywhere. The White Rocks were the only light entry in the American classes but were good in quality.

Wyandottes were out in force, the Whites bringing out two exceedingly fine cock birds and hens, several promising cockerels, a number of excellent pullets and one fine pen. Chase took most of the honors but Shull and Lorentz were close behind. Silvers included a first-class lot of old birds with several good youngsters, Lorentz taking nearly all the blues. Joe Shull's Partridge Wyandottes were stars in nearly every class and made a big winning. His Silver-penciled were up to a very high standard. Golden Wyandottes were an excellent lot, Sitterly and Shull dividing the honors. Buff Wyandottes were the best ever shown at a Johnstown Fair, the first cock, first and second cockerel and first and second pullets being beautiful in color and true in type. Black Wandottes and a few Columbians rounded out the best show of Wyandottes seen here in years.

The Mediterranean classes were strong in numbers and very good in quality. White Leghorns led and filled many coops. First cock was a large bird, beautiful in shape, nice in head and comb and very good in plumage. Mr. Howorth has a star in this bird. Staller's second was not far behind Howorth's. First cockerel was good in color, well matured, good style, fair lobe and comb; second (Windsor), a large white bird, good style and head, comb rather large. Follett's unplaced cockerel, while somewhat small, was a typical Leghorn in shape with excellent head points, notably comb. Hens and pullets were all superior specimens. Brown Leghorns were a fine lot, Mosher Bros. showing a pair of stars in first and second pullets, the color of the latter being very fine. Both Buff and Black Leghorns were high class, equal to the best seen at first-class shows. The few Duckwing Leghorns shown teemed with quality, in fact Judge Zimmer was so impressed with them that he thinks of sending over to England for a pen.

Minorcas, both in Blacks and Whites, had the quality if not the number, the Whites being particularly fine. Andalusians were especially good in males and the Anconas very strong and full of quality, the first pen of chicks being one of the best we have seen in several years.

The Asiatic classes were not as well filled as we expected, but there seems to be a lack of interest taken in Cochins, Brahmas and Langshans in this part of the country. There were a few good Light Brahmas, Buff and Partridge Cochins shown, but we missed the big exhibits of Black Langshans of Stahl and Windsor of past years.

Of the new varieties the Rhode Island Reds came out very strong, both in Single-combs and Rose-combs. The quality was excellent, especially so in the winning chicks of both varieties.

The display of Houdans was fine and larger in number than we have seen at any show in a number of years. This fine French fowl has always been a favorite in this section. The La Flèche were also up to a high standard of excellence. The few Crevecœurs shown were good specimens.

Martin Sharp furnished a whole show in all the varieties of Polish, the Silver- and Buff-laced excelling in quality. Dorkings were not as numerous as expected but contained some good Silver-grays and Whites.

Hamburgs were out in force and full of quality. Notably fine were Sitterly's Golden-spangled and Penciled. The latter were from the best strains in America and showed their breeding. Mr. Shepherd's Black Hamburgs were a fine lot, the chicks being well grown, having fine combs and lobes and good plumage.

The Bantam department was a feature as might be expected at a Johnstown show. John C. Blunck captured about everything in sight with as fine a string of Ornamental and Game Bantams as he has ever shown. "Barney" Mosher, as usual, made the pace with his Black-tailed Japanese Bantams.

The above is but a brief summary of what can be found at a first-class county fair and indicates what can be done when fanciers and the management of agricultural fairs get together and work to the mutual benefit of each other. It has been suggested that the fair show at Johnstown be opened up to the world, but lack of a building and coops has prevented the consummation of this. Should such an event occur in the next year or two we believe the largest and best fair show in the United States will be the result.

Cambridge, N. Y., closed with its usual successful fair last week, the poultry department being larger than ever, many of the big strings being present besides a host of smaller exhibitors.

Mr. C. P. Nettleton, Shelton, Conn., reports a homing pigeon in his yard August 29, having two leg bands, one being marked M 7687. He will box and ship to owner on receipt of letter and address.

The Empire Cooping Company of Fultonville, N. Y., has just completed a three-thousand-dollar contract for the Ohio State Fair Association and the poultry building on the latter's grounds is now equipped with a complete outfit of the latest style Empire poultry and pigeon cages.

The advance copies of the new Standard of Perfection have been mailed and within a week or two nearly every order will have been filled. The book was a long time coming but now that it is here its merits and demerits can freely be commented upon.

This new guide for breeders and judges has taken more than two years of hard work to get into book form. We have no hesitation in saying it is the most complete work of its kind ever published. A thorough comparison of the old and the new Standard will convince even the most skeptical anti-American Poultry Associationist that the latter is a vast improvement over the former.

It is a handsome book of three hundred pages, bound in green silk cloth with gold lettering and contains the detailed descriptions of 124 varieties of Standard-bred chickens, turkeys, ducks and geese. There are eighty-eight full-page illustrations of the leading varieties and thirty-four sketches illustrating terms used in the glossary. The original drawings were made by the well-known artists, Sewell, Schilling, Graham and Burgess. Before being accepted they were submitted to the most noted fanciers of the different varieties for criticism, and while there may be fault found in some instances, we believe that, as a whole, they will pass muster as being as near ideal as it is possible to

Gallery of Fame

F. B. ZIMMER

NOW we have the real thing—beagles and all. Everybody will agree with us that the portrait of Mr. F. B. Zimmer is one of the very best and most happy likenesses that it has been our pleasure to present to our readers. Mr. Zimmer is famous in more ways than one. He is one of those fellows that everybody is glad to meet. As a judge he is known far and near; as a breeder he is even known farther and nearer, and his standing is among he Standard makers. His pretty Bantams and cute little beagles are the pride of his big heart, and he asks for nothing better than to live all day with them. You will surely see the proof of what we say in the portrait above. We wish him continued success.

make them, taking into consideration the many divergent opinions and ideas of those interested in the making of them.

For obvious reasons the writer of these notes can not enter into any controversy regarding the ideal sketches in the Standard. They were finally accepted by the publication committee and as a member of the latter further criticism at the present time is out of place. But we do hope that readers of The American Fancier will carefully study these illustrations and express their opinions freely and frankly in these columns. The aim now is to improve on the work already done, so that in future editions of the Standard a nearer approach to perfection can be attained whenever such is needed.

Probably the most important and valuable change in the new Standard is the glossary of technical terms. A great amount of careful study and labor was expended on this alone and to-day it stands as the most thorough dictionary of definitions relating to poultry culture in the world. The illustrations accompanying these terms will prove a great help to the amateur, as well as to even the old fanciers and judges. It will settle many a dispute in and out of the show-room.

The chapter under "Instruction to Judges" is another valuable help to those directly interested. It brings out many new points and clearly indicates what a judge should do in many doubtful cases. The rules for applying the comparison system of judging are clear and to the point.

One exceedingly good rule in the new Standard is the following: "A few very small, grayish specks in white fowls shall not debar a specimen that otherwise is superior in color from winning over one less typical in shape and sound in color; provided, however, that the grayish specks do not appear prominently in the primary, secondary or main tail feathers." This should stop the throwing out of superior specimens simply because a few tiny gray specks irritated the stern judge. Too much of that kind of business has been done in the past and it has disgusted many a good fancier. Good judges of poultry usually recognize the good qualities of a bird first; the bad qualities are rarely, if ever, very pronounced in such specimens.

It is needless to say that the new Standard of Perfection should be in the hands of every progressive poultry breeder and exhibitor. Judges are supposed to be the owners of a copy of the Standard, and now is the time for all interested to get thoroughly acquainted with the new rules governing the exhibiting and judging of poultry as the new Standard will probably be used at all the coming winter shows. Read the special offers in The American Fancier and send in your order at once, as all orders are filled in rotation and the demand for the book is very large.

The annual exhibition of the Atlanta Poultry Association will be held at Atlanta, Ga., December 15 to 21. F. J. Marshall and S. B. Johnson have been selected to place the ribbons. Alfred Bentling will superintend the show and he is past master in that line. A nice guarantee fund has been raised, liberal prizes offered and with a reasonable entry, good management and the lot of good fanciers back of the show Atlanta will be strictly "in it" next winter.

Augusta, Ga., we learn, is making preparations for the "biggest ever" next winter. The old society that is back of the annual exhibition in that city has made a success of the latter for years. It is rumored that new Empire coops will be used at the coming show.

Rose-combed Black Minorcas are causing quite a discussion on the other side of the Atlantic. Columns of discussion are appearing in our English contemporary, Poultry, anent the sensational sale made by Mr. Geo. H. Northup of the United States, to Mr. Von Schultzenstein, of Germany. Some of the comments are decidedly spicy and the bouquets thrown are not as fragrant as violets or roses; they even indicate the odor of sulphur in an oslerized head of cabbage. But our friend, George, of Raceville, N. Y., cares not. It is mighty good free advertising for him, his patrons and breed. And Rose-combed Black Minorcas are a very good variety of fowl, no matter what its traducers may say.

Pigeon Notes

Too many pairs in your loft hinders success. Twelve or fifteen pairs are quite enough for a loft twelve by fourteen. When even this number is kept in a loft it is well to have a supplementary loft into which the young can be moved when old enough to care for themselves.

The mating in September of squabs hatched in April is recommended for reproduction. If you wish to succeed prevent pigeons from mating and hatching until a year old.

The old birds must have a plentiful supply of small grain, such as wheat, broken corn, small peas and Kafir corn for feeding the young. In addition to this, they must have grit and a plentiful supply of water.

Always provide plenty of fresh, pure water for the pigeons. Nothing is more poisonous or detrimental to the health than filthy, stagnant water. Quite a number of young die in their nests from the effects of bad food and not enough water.

Very few squabs will survive and live to maturity if the parents have nothing but whole corn to feed them. Always keep the hoppers well filled with wheat and cracked corn, then have a mixture of one quart of wheat, one quart of cracked corn, a pint of Kafir corn and a pint of hulled oats. Have this well mixed, and scatter a few handfuls on the floor to tempt the pigeons to eat between times of feeding their young.

A little broken charcoal, some broken oyster shell and some good grit should always be kept in the grit box, so that the pigeons may select that which they need. The small size chick grit is the best for the pigeons, especially in the summer time when they are feeding their young. The charcoal has a sweetening influence over the crop and gizzard. The pigeons know the value of this and will help themselves frequently when they have the opportunity to do so.

Do not be misled by the recommendation of the crosses of Runts, Homers and other pigeons, nor should you purchase too many Runts and other high-class pigeons for squab growers. A pair or two is quite sufficient for any beginner to experiment with. Whatever you select, keep them pure and true for best results.

THE USE OF EGGS

Their Food Value Compared in a Casual Way with Other Foods

It is generally stated as a safe comparison that six eggs are equal to one pound of beef, on the average, and while a man might, perhaps, thrive better on a diet composed of one pound of meat per day rather than of six eggs, at the same time eggs may be used with other ingredients so that the six eggs would be of more value as a food than the meat.

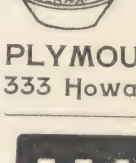
We might well consider in the first place the color of the shells of the egg. Some being dark and some very light, it is presumed by the naturalists that the original color of the shell of the egg of all fowls was of a character that conformed to the surroundings where it was most likely to be deposited for incubation. This original or natural color was a protection to the future or the offspring of birds and fowls of all kinds. This may be taken as a guide and the reason for the different colors of the shell of eggs laid by our several breeds or varieties of domestic poultry.

Eggs are used in so many ways that it would be scarcely possible to enumerate them all. We will simply state that eggs are especially rich in protein. When a considerable number of eggs, meat and fish are consumed it is better to eat them with more or less bread and potatoes. In this way you provide what is known at the present time as a balanced or proper ration.

The egg is composed of eleven parts refuse or shell, thirty-two parts the yolk or yellow of the egg, fifty-seven parts of the white or albumen of the egg. In the total make-up of the egg there is sixty-five per ct. of water when the entire egg, shell and all, is considered and seventy-three per ct. of water when the whole eatable portion of the egg is considered.

The white contains eighty-six per ct. water and the yolk but forty-nine per ct. water. The white twelve per ct. protein, two per ct. fat; the yolk fifteen per ct. protein, thirty-three per ct. fat. This shows conclusively the large per ct. of protein contained in the egg and the great necessity of furnishing it to the poultry during the winter months, when there is so little green food and no animal life at all for them to pick at.

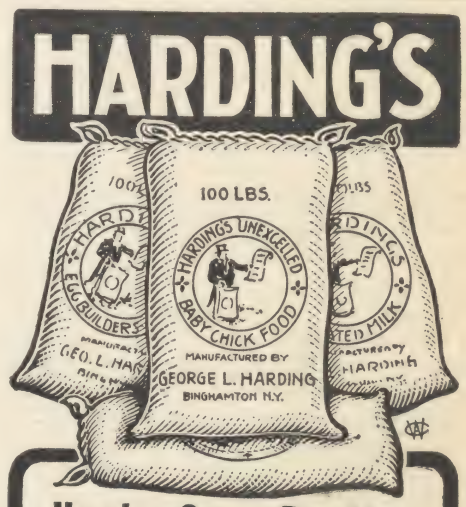
The animal life, bugs, worms, and other insects that are picked up by the fowls during the summer months furnish the very highest quality of protein food. As a substitute for this in winter a large amount of lean meat must be furnished.



The foregoing proof of the large amount of protein in the egg shows its high value as a food for mankind. We presume there is no article of diet so generally consumed throughout the world as are eggs of all kinds. In addition to the thousand uses to which eggs are put as food we may add their use in the manufacture of leather, in the weaving and textile work, and in many other industries where they are more or less used.

Another noticeable feature is the increase of the average egg yield throughout the country compared with the same ten years ago by the census, but over and above all this is the fact that the average price of eggs throughout the country, notwithstanding the enormous increased yield, has almost doubled in every locality. The cost of meat and of every product of living that we use has advanced and this has naturally increased the value or price of the eggs or poultry products throughout the country. In addition to this, the general use of eggs in families, restaurants and hotels has so largely increased in the last ten years as to almost guarantee against the possibility of there ever being too many eggs produced to supply the country. And even should the product increase more than we can imagine, there is almost an incalculable outlet for same to the South American countries and the South Sea Islands, and this will largely increase as the southern countries become more fully populated and our connection with them has been established through a regular line of steamers.

In addition to all this it has been discovered that the product which can be made from eggs, milk and other materials is the very best of food products to be used throughout the tropical countries. A company now already established in New York City has made a thorough experiment of this and they are now selling in large quantities a product of this character in the southern climates, and as it becomes as well known throughout the tropical countries, it will be more generally used than is condensed milk. All of these many uses for eggs keeps down the surplus and in this way helps to keep up to a paying valuation the selling price of eggs at all times and during all seasons of the year.



All the waste from the threshing machine and the chaff on the barn floor is full of seeds from the weeds. If this is used for litter in the hen-house next winter, the chickens will eat up all these bad kinds of seeds.

Ginseng The money making crop. Easily grown. Room in your garden to grow hundreds of dollars worth annually. Roots for sale. Plant now. Literature free. Write today. BUCKINGHAM'S GINSENG GARDEN, Dept. E. Zanesville, Ohio. 620-629

Young's Strain S. C. W. Leghorns

Have No Other Breeds

My strain, again for the 5th consecutive year, shows its superiority by winning more prizes at Madison Square Garden, New York, than all others combined, including cup, medal and four specials. Two weeks later I showed at Boston against the most prominent breeders of the East, winning nine prizes on nine entries over birds that won 1st at St. Louis.

I showed 2 Cocks, won 1st, 2d; I showed 2 Hens, won 1st, 2d
I showed 2 Ckrls., won 1st, 2d; I showed 2 P'l'ts, won 1st, 2d
I showed 1 Breeding Pen, won 1st

Also four specials. This record has never been equaled by any other breed or breeder in America. Stock for sale at all times. One hundred of this year's breeding hens for sale to make room for young stock. Address 44

BUFF WYANDOTTES

At Boston, Mass., Jan. 17-21, 1905, was held the Buff Wyandotte Club meeting which brought out all the largest and best eastern breeders and the largest and best exhibit ever made. **The Herald Square Winners** were there, the **Madison Square Winners** were there, and **Our Winners** were there and won their usual **Three Out of Five First Prizes,** making **Five Years in Succession** that we have won three out of five First prizes at Boston. This year we also won both second prizes where we lost the first prizes, as follows: **Cocks, 2, 3, 4, 5; Hens, 1, 2, 6; Cockerels, 2, 6; Pullets, 1, 6; Pen 1.**

Please note our record since 1897, given below, and remember this is the ancestry that keeps our train of this variety at the front. it dont cost any more than the other kind.

The American Fancier

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV — Washington, D. C., September 23, 1905 — No. 623

HOPE VALLEY, R. I., SHOW

The Washington County Agricultural Fair, or as it is bettetr known, the "South" County Fair, was a grand success. The single entry in the poultry department was a great improvement. There were over six hundred entries and the quality the best ever seen at this fair, so the fanciers say.

Barred Rocks were in the lead with the Whites next and the Buffs next. This was the best and largest exhibit of Buff Rocks I ever saw in any show, with White Wyandottes next and Columbians next; over sixty birds entered and over fifty on exhibition. Rhode Island Reds were almost extinct, but Rhode Island Whites showed up good. It was a great show of American classes, Asiatics being few in numbers. Leghorns were there in all colors and varieties, but not numerous. The Games were good and many of them. Bantams were scarce

Pigeons and cats were rival attractions. There were many birds sold and many more offers refused. The incubator hatched over one hundred chicks out of one hundred and forty eggs, after being carried over to the fair in a farm wagon. Geese and ducks were extra good in quality. Turkeys were good. Rossell and Shove did the judging, taking plenty of time and examining every bird out of the coop, and by so doing have no chance of a kick for neglect.

The experiment station brought down some turkeys for exhibition, and also brought sample livers of birds having died with blackhead. These were in glass jars and Cooper Curtice was on hand part of the time, explaining this disease to the interested ones. It was intensely interesting as he had live specimens for comparison, as most people think this blackhead is a disease of the head. Mr. Curtice is in favor of making an extra effort to increase the prize money on turkeys, and by so doing it will encourage the breeding of turkeys in "South" County. Some breeders do not know the blackhead in their flocks, but don't care to show, because it is too much trouble for the little prize money they get, and I, like Mr. Curtice, agree with them. This bird was once the pride of Rhode Island and a specialty in "South" County, and this fair is wholly a farmers' fair. It seems that with these conditions and with the experiment station close at hand they could work together on this subject. And if we have as good success in getting this turkey class increased as I did in the single entry, it will be one of our main features. Everybody took advantage of this and brought a good bird and no one was any more pleased than myself, for the fair committee came and acknowledged it.—Edgar E. McIntosh.

Below is the list of awards:

ECHOES FROM TORONTO

Minorcas, Spanish and Andalusians

Single-combed Black Minorcas.—It is seldom that we see so fine an exhibit of Minorcas in the early part of Autumn as were lined up in competition at the recent Toronto Industrial Exposition. In many cases the competition was so strong that the closest scrutiny was necessary to decide between the winners and the specimens which were left without any prizes made a class which would not be a discredit to any show. I have not time to go through the class and mention all, even the winners, separately, but I can say, that for a Minorca to have won a prize at this Toronto Exposition is a guarantee of excellent quality and great money value. It is worthy of note that the cock which won first at Toronto is the same which, as cockerel, won first and was the subject of much favorable comment at the St. Louis Worlds Fair last October. The second and third cocks crowded him very closely for first place at Toronto. The hens were large and of fine quality throughout the class. The cockerels were extra fine for the time of year, and a great credit to their owners. First cockerel was not so large nor so old as the second, but he won on account of an extremely fine head and excellent shape and color throughout. I expect to hear great reports from him at the winter shows. Second cockerel was a fine, large bird, well matured, and a beauty, the largest bird in his class, but not as fine in comb. The third cockerel was not so well matured, but promises to be a "cracker jack." I learn that his owner has sold him for $25 to come into the "states." The pullets sustained the reputation of the other classes. First pullet was a gem fully matured, comb well grown out, and about ready to lay.

Single-combed White Minorcas.—The White Minorcas came out in excellent quality. Quite a number of coops were vacant, owing to delay in transit of a shipment from Chicago. Those on exhibition were of large size and good Minorca type, and the class was a very interesting one to judge. I wonder why there are not more of the White Minorcas bred because I think they are the most desirable white variety we have.

Rose-combed Black Minorcas were a small class, three cocks, three hens and one pullet. The first cock and first hen were true Minorca shape and fine color with good combs and lobes. They won the special ribbons of the International Rose-combed Black Minorca Club, their owner being a member of that club. The second cock and second hen were also good birds. The third hen lost in color of lobes and was not as large as the other winners. The remaining cock was of different type and not a show bird.

White-faced Black Spanish.—The Black Spanish was also a small class in number, but I believe the first and second cocks were the finest in head points of all the birds of that variety that I have ever seen.

Andalusians.—Another good class of excellent birds. Here again Worlds Fair winners were competing and were among the winners. After the judging was finished it was found that Newton Cosh had won first cock, first hen, first cockerel and first pullet. This is the tenth year in succession that he has won the same prizes at this show. The Toronto Show is patronized by many genuine fanciers, who are breeders of experience and who appreciate justice. I did not hear any complaint of any of the work done by the judges. Each exhibitor seemed pleased to have won as much as he did in such strong competition.—George H. Northup.

Games and Game Bantams

The Game classes at Toronto while not large contained many birds of superior merit, in fact the average quality was very high. The Black-red cocks were all reachy, bright-colored, hard-feathered birds. Hens nice and reachy and pullets extra tall. The winning Brown-red cockerel, which also won cup for best of 1905 hatch, was a "corn cracker," about the best we have ever handled. Great style and reach, grandly laced breast, and of the correct lemon shade of top color. Pyles were good and ducklings particularly strong.

The Game Bantams made up in numbers for what was lacking in the large Games, and as for quality it was there to burn. In fact, the Game Bantams were a whole show by themselves. The Black-red cock class was a hummer, the best we ever handled, with not a bird in the lot but that was of superior merit. There was bird after bird that failed to get a mention that was good enough to win at almost any show. The winning cock was all there, a true little "Game cock;" a little lacing on breast was his worst fault. The second cock was also a grand one for style, reach and hardness of feather, but not in as good condition as the winner. The winning hen was a nice, tidy-sound-colored hen with nice style and reach. The second was of same style and type and ran winner very close. The winning cockerel was a very reachy, bright-colored, stylish little fellow and as we afterward understood just imported from Ainscough.

The winning pullet, which also won cup for best of 1905 hatch, was a little gem and well-nigh perfect, grand head and neck, nice wedge-shaped body, tail of soft, even color throughout, with plenty of style and reach. The Brown-reds were of grand quality and are fast gaining in style, reach and hardness of feather on the other varieties. The Pyle classes were very large, but average quality not quite as high as in Black-reds. The winning cocks were all nice, reachy, bright-colored birds. The winning hen was a sweet little thing, very small and neat, grand style and reach, hard feathered and racy. The winning cockerel and pullet were very typical little birds, nice wedge-shaped, hard in feather, and should prove hard nuts to crack at the winter shows. The "star" of the Duckwing alley was the winning cock, a great Duckwing, very tall and reachy, exceptionally sound in color, grand head, neck and tail, nice wedge body set on a grand pair of pins and as hard as nails. The other winning Duckwings were also of extra No. 1's. The Whites were a large class. The Bantams were forced to compete in the any-other-color class. The cocks, cockerels and pullets were all good, but in the hen class they had to take off their hats to three clucking little wheaton hens that ran very close together.

In conclusion there are a few points that must have been potent to any observing visitor to the Industrial. First, that our brother fanciers on the other side have got the "goods." Second, that they know a good bird when they see it. Third, that they know how to fit their birds and put them into the show-room in proper form. And fourth, that they waste neither time nor money on entering and showing scrubs. I never before handled the birds at any show, not excepting our own pet Madison Square Garden, where this latter variety were so conspicuous by their absence.—A. F. Peirce.

Burgott's Bouquet

I may be a little late, but really wish to say a word in regard to the poultry exhibit of the wonderful Toronto Fair. Brother Drevenstedt has already given the readers of The Fancier a very clear idea of the exhibit and the management of the same, and I sincerely wish to bear him out in all that he has told. Yes, why can not such conditions exist at all of our shows? One reason, of course, is that we haven't a Dr. Bell to engineer it. However, I believe that if we would only visit this exhibition or show a few birds, study the management, watch the way this great poultry department is handled by that genial gentleman, Dr. Bell, we would learn something and could come home and say that we will do likewise. Yes, everything in readiness, no waiting, no errors, all the birds where they belonged, no questions need be asked. I assure you, readers and brother judges, its a pleasure to officiate at a show of this kind, and I am positive a pleasure to exhibit at such a show. I only regret that I was not able to remain at Toronto for a week, but under the present conditions with so many of our men taking vacations I was lucky to get one day to do my work in. I note that Drev. says I was looking remarkably fine, but I am positive that could I only have remained a day longer at the least and had that hearty welcome which "Uncle Billy" McNeal and "Deacon Dick" Oke always extend to you, I would have looked better and have felt younger, and there are so many more that you are always pleased to meet, Prince Butterfield, Messrs. Cosh, Donovan, Barber, Daniels, Hammil, Grimsley, and a host of them that I am unable to recall at once. I say attend the Toronto Fair and come home and get into line.—Geo. H. Burgott.

A Big Transfer

Washington, D. C., September 5, 1905.

To whom it may concern:

This is to certify that I, Joseph F. Bardroff, have transferred to the Potomac Lofts (Charles E. Schofield, proprietor) all the Pigmy Pouters, both old and young, that I possess. This transfer carries with it every feather of pigeon kind which I own, good will and everything thereto, and I agree not to own myself or in partnership with any one else to breed or to offer for sale any Pigmy Pouters whatever during the period of five years, except what may be bred at the Potomac Lofts.

Jos. F. Bardroff.

Witnesses:

Edward S. Schmid.
T. F. McGrew.

Silver-penciled Wyandottes and Columbian Wyandottes have been in great demand the last season. It looks as though they will be the next favorites in the exhibition halls.

Items of General Interest

The Excelsior Wire and Poultry Supply Company, of New York City, presents to our readers a most attractive sale of their goods, and requests that every one interested shall send to their headquarters at 26-28 Vesey Street, New York City, for one of their new 212-page catalogues, which will be sent them providing they say that they wish Department N catalogue.

Mr. D. W. Young, of Ridgewood, N. J., who made such a winning last winter at Boston on his White Leghorns, writes us that he was never so fortunate in the raising of fine stock as this year and that he is willing to part with many show specimens at remarkably low prices. Write him to learn further particulars.

Continual improvements in all kinds of poultry appliances keep pace with the times. Nothing, however, has surpassed the advancement of woven wire for fencing. The Page people of Adrian, Mich., have some new features along these lines to present to our readers this fall. Send to them for the new Page Fence Age, a most interesting publication issued by them.

Farm and Home states that the reason so many people fail in business is because they do not advertise properly. The best part of this statement is the "properly" expression. Entirely too much advertising is done improperly and unprofitably. Every one might succeed as the result of advertising if they had studied the proper methods for presenting their stock for sale.

"MAMMOTH PEKIN DUCKS"

Let us know your wants. We have either sex. Old or young. From $1.00 to $3.00 each. Winner of 1st prize at New York State Fair, Syracuse, N. Y., 1905.

Editorial Gossip

Beginning with March 4 last, the publishing office of The American Fancier was transferred from Johnstown, N. Y., to Washington, D. C. Starting with that issue there was placed at the head of the editorial columns the following: "The American Fancier. Published on the first, second and third Saturdays of months in which four Saturdays occur, and on the first, second, third and fourth Saturdays in which five Saturdays occur." This gives forty issues of The American Fancier each year, and does not change the serial connection of that publication. This was done to avoid the necessity of issuing both The Feather and The American Fancier the same week in each month. The combination of these two papers has been designated by White's Class Advertising as "The Big Two of the Poultry Press."

This method of issuing the paper does not in any way interfere with the circulation or the advertising patronage of the paper. Those who desire to receive fifty-two numbers of The American Fancier for the one dollar subscription can be accommodated. Those who prefer to pay one dollar for the year's subscription will receive forty issues of The American Fancier and twelve issues of The Feather each year, giving them two of the best poultry papers in the world for the subscription price of one dollar. Display advertising in The American Fancier is paid for so much per line or inch, each and every insertion, and the classified advertisements are paid for in the same manner. Whether you take one or fifty insertions either in the display or classified advertisements you will receive the given number of insertions of the advertisement, for no advertisements are taken by the year, all being taken by the line per insertion.

It is to be hoped that these explanations will be fully understood by our readers. No one need be misled, nor need they misunderstand the manner of issuing the paper, if they will simply read the headlines on the editorial page and remember the words of explanation in the above.

Since The American Fancier has come to this office many changes for the better have been made. The quality of the paper, the general make-up of same, the addition of the Gallery of Fame, which has attracted so much attention, and the continuance of the Editor's Perch more extended and better than ever, have largely increased the demand for and the popularity of the paper. It now goes into many localities into which it was a stranger before, and is clamored for more loudly than ever by the subscribers who have taken it for years.

It is the purpose of the management of this paper to extend its influence into localities where it has been unknown before. No paper publishes so complete a list of show dates as The Fancier. None pay such special attention to the reports of fall fairs and winter shows. No other paper published in the United States goes weekly into the hands of its readers carrying to them the news week by week rather than monthly. All these features of interest have been added, and tend to make this paper more anxiously sought after by the readers than ever before. Nothing shall be overlooked that we believe to be for the welfare and for the best interest of our readers, all of whom are asked to communicate freely with one another through our columns. The way to make a weekly paper interesting is to write your daily thoughts and send them for publication.

Editor Drevenstedt, who originated and has continued with the paper since its beginning, is still an associate. Being relieved of the duties of office work and looking after the publishing of the paper, he has more time for traveling about and gathering items for his portion of the paper, which has been so interesting to his many friends and the readers of the journal. Still residing as he does at Johnstown, he is placed in a position to be well acquainted with everything happening in the East, while others connected with the paper look after the North, South and West.

We trust that this explanation of the policy of the paper may fully satisfy all our readers that The American Fancier will continue to wave its initial head lines for all time to come, and make it a special duty to cater to its readers.

We have several letters from Maryland and Virginia, complaining of the unsatisfactory results in the attempt to grow young turkeys the past season. One lady writes that she "can not understand why it is she can not raise her young turkeys;" that she has "some of the product of the same stock that her grandmother used to be so successful with." In attempting to change her mind, she could not believe that our statements were true when we said that she never could succeed until she introduced strong, vigorous blood, and selected the strongest and most vigorous hen turkeys to produce the eggs for hatching. She seemed to think that the little puny stock, the result of criminal inbreeding, would be just as good as was the strong vigorous outcroppinng of the wild turkey blood of grandmother's time. Unless the people of this country can grasp the situation and recognize the absolute necessity of having larger and more vigorous turkey hens mated with toms from a different strain, there will be less turkeys grown each year, until a crop of turkeys in our country will become almost as extinct as are the beautiful wild pigeons of the present day. Now is the time to sound the alarm, before it is too late. Build up the strength and vigor of your stock of breeding turkeys, and there will be no more trouble in the growing of the poults than there is at the present time of growing young Plymouth Rock chickens.

There has been an unusual effort made the past season for growing together poultry, fruit, bees and squabs as a winning combination for a small rural plant. There is likely to be in the near future an unusual awakening in the cultivation of bees. The introduction into this country by the Agricultural Department at Washington of the Caucasian bees, known as the bees that do not sting, will renew the interest awakened when the Italians were first introduced. While these bees are provided with the sting, they are so quiet and domestic and so slow to make use of this means of defense, that a careful manager can go among them without even the use of gloves. This new bee will arouse new interest in honey-growing, and must lead to a larger number of small farms devoted to the union of poultry, fruit, bees and squabs; and we do not know of anything that can prove more profitable than will this in many localities of the country. Nowhere is this combination more suited than to the South, and it is to be hoped that the people of the southern states will carefully consider this as well as the improvement of turkey growing in the same locality

The people and the newspapers interested in poultry are going wild over the question of forcing molt in poultry. We have stated in the columns of our papers that this might be handled so as to be beneficial to the poultry. Do not lose sight of the fact that great harm may be done to large flocks, the result of an improper application of the methods advised. It is much better to let nature take its course than to attempt to assist nature after a fashion that may prove most destructive to the fowls. In looking over some twenty-seven exchanges we find in each of these an article telling how to force the molt, some of which when applied must prove most detrimental to the poultry. Do not be led astray to the extent of injuring your flocks through the forcing of the molt.

California, Petaluma and the railroads interested in advancing immigration, are making the wildest statements with reference to the poultry interest at and near the Pacific Coast, the latest of which (or one of the latest at least) tells us of an incubator with a capacity of sixty thousand eggs. They have not attempted to establish any story of hens that will lay two eggs a day in that section, but they are coming very close to it. It is not many years since "sponge" was introduced in that section of the country and sold by the barrel for curing of roup, which was then most prevalent. Since that time they have learned that it is quite as necessary to house poultry in that locality as in the cooler parts of the country. Poultry growing has become quite successful on the Pacific Coast, and throughout the far western states, but no more so than it can be in every other locality. There are many sections of the country, north, south, east and west that might be turned into profitable poultry farms. This is particularly true throughout the South. It is only necessary to properly grasp the question, take hold of it in earnest and push for success, and you will succeed quite as well as to travel thousands of miles to find a location. Stick close to the family fireside, and work for success, and you will have it.

The Feather and The American Fancier will be issued as follows:

The New York State Fair closed at Syracuse last Saturday. Being the event in the fair line in the great Empire State, it is a pleasure to say that it was a success as far as exhibits and attractions were concerned. The inclement weather the first three days cut the attendance down and made the management feel as gloomy as the weather. Still, on Wednesday, a raw, cold and rainy day, some thirty thousand sturdy grangers visited the fair and enjoyed the sights, exhibits and visits with old friends. Thursday turned up cold, clear and bright, and over fifty thousand people were on the grounds. The rest of the week brought great crowds and we are in hopes of eventually crowding the big Toronto fair for the honors in attendance and number of exhibits.

The poultry exhibits eclipsed all previous records. It was rumored that some seven thousand birds were shown. There were nearly four thousand listed by actual count, and that is a tremendous show. It took several days for the judges to handle this lot of birds and get the ribbons in place. Three poultry judges and one pigeon adjudicator are hardly sufficient to get a show of this size judged in good season. Had it not been for the convenience of the separate judges' aisles it would have been impossible to judge the show in a week with the crowds rushing through the aisles.

Superintendent John D. Jacquins and his able assistant, Dr. John Hurdis, handled the exhibition in fine style. The large corps of well-qualified helpers kept everything in apple-pie order. The classification was excellent, the feeding and breeding careful and prompt, while cleanliness reigned supreme.

But there was one thing manifest to all, viz., the utter lack of room for the exhibits in the poultry building and the annex. Birds were crowded too much, the light in the main building was very poor, many of the birds in the lower tiers being like Moses when the light went out. It is a pity that such a fine equipment of coops is so crowded in an inadequate and unsuitable building.

Furthermore the coops for Bantams are too small, i. e., not high enough to show birds to good advantage. And when they are piled three tiers high the effect is lost. What the New York State Fair needs is a model poultry biulding, large enough to admit of single tiers, with aisles wide enough to accommodate the enormous crowds that find pleasure in visiting what is one of the great features of this great fair. Light and ventilation are two other important features necessary to make this show an unqualified success, as far as the building is concerned. We are informed that a new building will be erected next year and we earnestly hope such will be the case.

The poultry annex at the state fair was crowded with turkeys, ducks and geese, besides finding limited room for the big exhibits of the Cyphers Incubator Co., the Cornell Incubator Co. and Charles A. Cyphers exhibits of incubators and brooders. The Lathrop Manufacturing Company and George L. Harding had a separate building of their own in which to display their exhibits. It will take one good-sized building alone to show off to advantage the large line of goods manufactured by the above mentioned concerns. These exhibits are intensely interesting to visitors, and the Empire State is big enough to furnish the proper accommodation.

The quality of the birds on exhibition in most classes exceeded that of any previous fairs held at Syracuse. Barred Rocks were fewer in numbers, perhaps, but had plenty of quality with such men as Gardner & Dunning, Gilbert, Bundy and Jacquins showing. "Madison Square" Gardner showed a raw pullet that had parallel barring and color about as near perfect as we ever saw. It was the result of a special mating and looks "all to the good," to use a popular phrase. This reminds us of the fact that "Matt" Gardner has lost none of his winning ways and is as dangerous as ever in the show arena.

Buff Rocks were a very warm lot with such an expert master of showing as N. V. Witbeck, of Edgewood Farm, to set the pace. He captured nearly everything in sight, yet was hungry for more. "Andy" Riddell, who judged this class, had his hands full, but did his work in good form.

White Rocks comprised a very strong bunch of light grade birds, Rock Hill Poultry Farm showing a number of extra fine birds.

Wyandottes loomed up very strong in most classes except Silvers and Goldens. The latter were few but fairly good. The same might be said of Columbian Wyandottes.

White Wyandottes were a banner class with lots of quality. First cock owned by Coudee, an excellent bird in color and type; first hen, Rock Hill Poultry Yards, another fine one; pens very good with best one thrown out for a small stub on leg of one bird. First cockerel, Martin, was a beauty in style and plumage, a winner all over. Buff Wyandottes made up another strong class, quality being pronounced in the winners. There was a good display of Black Wyandottes. Partridge and Silver-penciled Wyandottes had great entries, E. G. Wyckoff showing a very fine string of both as did some of the other exhibitors.

Display of Black and Mottled Javas was better than is usually seen at big shows.

The American Dominiques at Syracuse reminded one of the fact that once upon a time there was such a breed. But aside from this the Dominique of to-day is not the Dominique of the past. Too much Barred Rock blood has been introduced and the sprightliness and style of the old-fashioned "Dominicker" has been lost.

A large and very strong class of Rhode Island Reds was entered, the quality being excellent all along the line. This breed is "coming some" and bids fair to have a firmly established place in popular favor in the future. Breeders are getting down to the color scheme more consistently, less mongrel buffs being shown and more real reds seen.

The Asiatic classes, as at most shows, ran rather light in entries. Light Brahmas, however, came up fairly strong in numbers and were good in quality—something to be thankful for. Dark Brahmas showed a goodly lot of quality. Cochins were rather weak in numbers but as good in quality as some of the winners in the Buff and Partridge classes. Langshans had small classes, but some fine birds were shown in the Blacks.

The display of Brown Leghorns was good with some exceedingly fine quality in spots, notable in females, the second prize hen being a beautiful bird in color, shape and color of legs, taking second place only to one of Exmoor Farms's famous old hens. The male birds were not as strong as we have seen at this fair in the past. Rose-combed Browns made up a very strong and good class, the best seen at Syracuse in years. White Leghorns showed a falling off in numbers and were hardly up, except in the case of some of the winners, to the standard of former years. There is too much tendency toward the Minorca type of bird, too little attention paid to the bright yellow leg and beak, so inseparable from a real Leghorn, and we think stronger efforts should be made to bring this most popular fowl in New York up to the former high standard. It is time there were some unplaced birds, a bit raw and undeveloped, that showed Leghorn quality, but, as a rule, the classes were a disappointment to the old-time Leghorn fanciers. There was a fairly strong class of Rose-combed Whites and a very good and large class of Black Leghorns. Buff Leghorns, while not as large classes as we have seen at Syracuse, were very good in quality, some of the best breeders of this variety having exhibits. There was a really fine display of Silver Duckwing Leghorns.

Anconas made a very good showing, but Black Minorcas dropped somewhat in numbers from what we expected, albeit the quality was good. White Minorcas teemed with quality and were fine to

Gallery of Fame

HENRY BERRAR

THERE came from California a quiet, bright-faced, intelligent gentleman as one of the judges in the poultry display at the St. Louis Exposition. It was a pleasure to meet him. It was a pleasure to be in his company. When he left St. Louis he took with him the friendship of many new acquaintances. This man was Henry Berrar, of San Jose, Cal., whom our artist has most certainly portrayed in a lifelike manner. This picture is presented to our many readers of the East that they may become better acquainted with him and we feel assured his host of friends on the Pacific coast will highly commend our artist for the perfect manner in which he has executed his work.

look at. Andalusians were displayed in classes of good quality. Spanish were weak in numbers and only fair in quality.

Polish filled many coops and numbered many fine birds. It was really an excellent display of these very attractive and handsome fowls. Valdosta Poultry Farm, M. T. Burn and Exmoor Farms divided the honors in the above classes.

Hamburgs came out very strong in numbers and in Silver-spangled were especially good in quality of the winners. Blacks contained some real good uns also, but many of the penciled varieties, while fine in quality, were overshown and needed a rest on a nice green pasture.

In the French classes the Houdans and La Flèche were far better than usual, some of the winning Houdan males being fine in size and shape and fairly good in color, crest and beard. The La Flèche were fine in type, although lacking somewhat in size.

Dorkings made up a very nice collection taken as a whole, the Whites and Silver-grays being especially good, Miss Goodell showing some very fine birds in colored Silvers and Whites.

Orpingtons, while not very large classes, contained a number of nice birds in the different varieties.

Games lamentably weak in numbers and only fair in quality.

One of the features in the Indian Game classes was the exhibit of Buff-laced Indians, made by Geo. W. Webb. In shape and color they showed up remarkably well and attracted much attention.

Bantams at Syracuse filled many coops and had splendid quality in most classes. In Game Bantams we missed a few of the prominent exhibitors, but there was plenty of good stock for the judge to handle, Frank Chapin showing some fine Black-reds; Foy, some good Red Pyles, with Valdosta, Bean and Burn strong in other classes.

Ornamental Bantams brought out a great string of Sebrights, Editor De Puy, of Syracuse, showing a really grand pen of Goldens, Crandall, Bean and Valdosta also having a fine lot in the single classes. Silver Sebrights were a warm proposition, the quality being very good. First cock was a typical Sebright in shape, fine in style, and nicely laced, second and third all to the good in color, but loose in shape. Winning hens, first and second fine in lacing and good in shape. First cockerel and pullet a nice pair of birds in color, albeit a trifle heavy in lacing.

The Black Rose-combs were exceedingly fine, notably first cock and hen, a pair of gems. Booted Whites and Japanese showed up in fair numbers and good quality. Light Brahma Bantams were fine as silk, quality being way up. The banner classes were the Buff Cochin Bantams. There were eleven breeding pens, eleven cocks, twelve hens, twelve cockerels and thirteen pullets of this variety shown. Such noted breeders as Schilling, Crandall, Van Dervier, Bean, Lott and the newcomer, Rock Hill Poultry Farm, competed. It is a pity that this fine display was cooped in a place where it was hard to see the birds and in coops that were too small. It was a pleasure to handle some of these birds as the quality was simply magnificent and the competition very keen. First pen was beautifully shown, the evenness of color, shape and style of birds being pronounced. First pen of young was another grand lot of birds and will be heard from at future big shows. First and second cocks both grand little typical Cochins, only evenness of color in first being a slight advantage over second. First hen a beauty in color and feathering, second a grand old bird that shows her age, failing slightly in color to winner. There were some beauty brights among the cockerels and pullets; several of the unplaced birds will be heard from when more fully developed. We do not remember ever handling a finer lot of Buff Cochin Bantams than at this show. There were some fine Black, White and Partridge Cochin Bantams to round out what was one of the best exhibits in these classes seen at a New York State fair.

The turkey exhibit was small, but geese were numerous and excellent in qualitty. The same can be said of Rouen, Cayuga, Muscovy, Pekin, White-crested and Call Ducks. The quality was there in every instance. Some of the East Indian ducks should take the cure and get down to the requisite size and weight before competing for prizes.

"Uncle George" Harding was a daily visitor at the New York State Fair. His famous chicken food was served to the feathered bipeds, much to their liking.

Chas. A. Cyphers, of Model incubator fame, has started a poultry plant at Wayland, N. Y., to be run in connection with his big incubator and brooder business at Buffalo. "Bob" Hermann, formerly with the Cyphers Incubator Company, will be located at Wayland and take charge of the plant.

The Hon. M. F. Wemple, manager of the Empire Cooping Company, spent one day at the state fair and four hours in a dining-room of the Hotel St. Cloud with Andrew Riddell, the well-known Buff Wyandotte expert. As gourmets these two gentlemen have no peers. They can eat at all hours and understand the art of eating as well. Mr. Wemple has cut out creme de cocoa as a desert, however.

Take it all in all, the poultry exhibit at the state fair brought many fanciers in closer touch with each other; there was plenty of good feeling, very little kicking, and a general desire to get together and plug for a greater, bigger and finer show than ever next year. The awards at this show will be found on another page of this issue and will prove interesting reading to all fanciers who follow the winnings of leading exhibitors as well as the honors won by the newcomers.

[Unfortunately, up to the time of going to press the list of awards had not been sent in and will, consequently, have to be printed in the next issue.—Editor.]

Lost and Found

Mr. H. L. Moody, of Greenfield, Mass., was so unfortunate as to lose a White Wyandotte pullet at the recent Altamont (New York) Fair. He seems to think that some one has made a mistake and carried home his pullet. If any one has he will please communicate direct with Mr. Moody. He also reports to have found a Homing pigeon, wearing two leg bands, wing feathers pulled and wings slightly injured, but which will recover. Any one interested can communicate with him.

DATES CLAIMED

(*Continued from page 5*)

Dec. 26 to 31.—Ravenna, Ohio. The Portage County Poultry Association. Harry Beck, secretary. Ben S. Myers, judge.
Dec. 26 to 31.—Oregon, Ill. Ogle County Poultry and Pet Stock Association. W. C. Pierce, judge. L. H. Valentine, secretary.
Dec. 27 to 29.—Parkersburg, W. Va. Parkersburg-Marietta Poultry Association. A. I. Spencer, secretary. H. A. Emmel, judge.
Dec. 27 to 29.—East Palestine, Ohio. East Palestine (Ohio) Poultry Club. C. F. Early and Phil Feil, judges. Wm. Haught, secretary.
Dec. 27 to 30.—East Greenville, Pa. Perkiomen Valley Association. C. A. Mack, secretary. Theo Wittman, judge.
Dec. 27 to 30.—East Greenville, Pa. W. Theo. Wittman, judge. C. A. Max, secretary.
Dec. 27 to Jan. 1.—Tacoma, Wash. Tacoma Poultry Association Thirteenth Annual Show. Elmer Dixon and Harry H. Collier, judges. Mrs. C. A. Pratt, secretary, 3203 South Seventh Street, Tacoma, Wash.
Dec. 28 to 30.—Clay Center, Kans. C. H. Rhodes, judge. M. B. Caldwell, secretary, Broughton, Kans.
Dec. 29 and 30.—Eldorado, Ill. Warren Sloan, secretary. D. T. Heimlich, judge.
Dec. 29 to Jan. 1.—Wallingford, Conn. New Haven County Poultry Association. D. A. Nichols, W. H. Card, judges. Wm. J. Hogan, secretary.
Dec. 29 to Jan. 2.—Toronto, Canada. H. Durston, secretary.

BUFF WYANDOTTES

At Boston, Mass., Jan. 17-21, 1905, was held the Buff Wyandotte Club meeting which brought out all the largest and best eastern breeders and the largest and best exhibit ever made. **The Herald Square Winners** were there, the **Madison Square Winners** were there, and **Our Winners** were there and won their usual **Three Out of Five First Prizes,** making **Five Years in Succession** that we have won three out of five First prizes at Boston. This year we also won both second prizes where we lost the first prizes, as follows: **Cocks, 2, 3, 4, 5; Hens, 1, 2, 6; Cockerels, 2, 6; Pullets, 1, 6; Pen 1.**

Please note our record since 1897, given below, and remember this is the ancestry that keeps our train of this variety at the front, it dont cost any more than the other kind.

The American Fancier

A NATIONAL MAGAZINE DEVOTED TO POULTRY, PIGEONS AND PET STOCK

Volume XXIV | Washington, D. C., October 7, 1905 | No. 624

THE AVERAGE VARIETIES

Under the standard classification Houdan, Crevecœur, La Flèche are grouped.

These fowls have never been prime favorites in America, but the Houdans have been bred very much more universally than have any of the others. The Houdan is the prime favorite or rather was the prime favorite in France for table poultry in years gone by. At the present time they have one or two new breeds that are produced through mixing and crossing other fowls with the Houdans that are said to be almost equal to the Houdan as market poultry.

The Houdan is a large, heavy-bodied fowl, with rather short legs, white skin, shanks pinkish-white shaded with darker color. The very large, long, plump body of the Houdan rivals the same formation of the English Dorking which is the prime favorite with the English people. A mixing up of the Dorking, Asiatic and Houdan in France created the Faverolles, some of which were brought to this country and heralded as wonderful fowls, but they seem to have been disappointing.

There are quite a number of breeders scattered throughout the United States that make a specialty of breeding the Houdan and they have done much to further the interests of the breed in this country, but the topknot or crest and beard of the Houdan rather count against them for general purposes for the reason that the crest becomes damp in the rain and in the cooler climates this will not dry quick enough to prevent the liability of the fowls taking cold. It is also claimed that the beard will become drabbled with the wet and in the same way injure the poultry. All these things are simply local conditions which can be easily overcome by careful people. No poultry should be permitted to live continually out of doors in wet, cold or damp weather. They should be provided with sheds for shelter where they may go in from the rain without being compelled to go into stuffy, overheated and often vermin-filled houses.

The Houdan is a most meritorious fowl for both egg-producing and table purposes. They are broken black and white in color, thrifty, hardy and fairly good egg-producers of fine, large white eggs, very much like the eggs produced by the Minorca fowl. At our winter shows and fall fairs these birds attract considerable attention whenever shown and they are beginning to be taken up by people who have country places, where they raise their own poultry for their own family use, especially those who are very fond of the most excellent breeds of table fowls.

The Crevecœur is very much like the Houdan, in shape a little more compact and heavier in body. They have the crest, also the beard; are of a rich, brilliant black color with dark or black shanks and feet. The La Flèche is also black with very dark shanks and feet, no crest or beard, simply having what is known as an antler V-comb. Black fowls not being highly considered in this country counts against them, but we presume there can not be found better table poultry than the La Flèche. They do not have the troubles that are laid against the crested fowls. They are very active foragers, of large size, and their bodies are well proportioned and built up in a way that supplies the largest amount of table meat.

The Faverolle is shaped somewhat like the Dorking or rather what might be expected of a cross of the Dorkings, Houdans and Cochins. They have the beard but no crest, some little feathering on the shanks; the males, most of them, colored like the Dorkings, the females a mixture of very light salmon with top-color of buff or salmon and buff. The females do not run regularly in color as do the males. For some reason or other they have not been successfully grown in this country, very few of their eggs having hatched and where a number of pens are kept the fertility was so unsatisfactory that they were discarded entirely on this account. This may be a condition brought about by the great change of climate between France and this country, though many of them having come from England rather than France this may not be the case. We hope yet to see the Faverolle successfully grown in this country, so that they may have fair opportunity to prove their quality and worth.

BROWN LEGHORN

Fine Poultry

The exhibit of poultry at the Allentown Fair was in keeping with the entire outfit. For instance, during the week of the Allentown Fair over one hundred and fifty-five thousand people passed the turnstile; the total receipts of the week was over $52,000. This goes beyond anything of the kind that we have ever heard of. The poultry and pigeon display at this fair outdid itself under the management of W. Theo. Wittman, the new superintendent. Mr. Wittman was always known as the Brown Leghorn King, until he sold out his entire stock to the Exmoor Farms. The Exmoor people have carried a beautiful line of these Brown Leghorns through the entire fair circuit, winning many prizes in all directions.

Mr. Wittman has taken up a new line in the poultry business, in the development and improvement of the Silver-penciled Plymouth Rocks, of which he had a splendid display at Allentown, some of the females being better in coloring of plumage and shanks and penciling of the feathers than the dark Brahmas themselves. All are large, fine and attractive specimens.

One of the most attractive features at the Allentown Fair was the display of pigeons and water-fowls; ducks and geese of all kinds and variety in large numbers were there. Allentown is in the locality where the best water-fowls of this whole country are grown, including those grown at Exmoor Farms. The size of the Pekin ducks, the Embden and the Toulouse geese outrank any like display that we ever saw at fall fairs.

At Trenton the week following Allentown was the fanciers' show for fall fairs. The entry here was almost entirely confined to the breeders themselves. The poultry was cooped singly, all judged the first day and the prize cards in place by sundown. Superintendent Gladney has made a great success of the management of the poultry department of this fair. Bantams, pigeons, pet stock of all kinds and ducks have been added to the list; and the gates closed Saturday night at the Trenton Fair grounds with a record of great success in all departments, and the greatest of all in the poultry display and all connected therewith.

Dates of the Boston Show

Editor American Fancier: The dates for the Boston Show were announced the first day of the last show, Jan. 16-20, 1906. Of course these dates were not positive until the hall could be secured. I have just finished a letter to the superintendent of the hall closing a contract for these dates. There were several matters that had to be straightened out before we could definitely know what our exact dates would be. I should have answered your first letter immediately but I expected to have the information any day. We are looking forward to a larger and more successful show than that of a year ago and we would not be disappointed if we had the largest and best show in the history of the association. That may be expecting too much but we are aiming high in hopes of hitting the mark. There will be the same old management as in the past but you know the Boston show is so nicely arranged that it almost runs itself now. We have a few changes and innovations that may be tried this year if they work out well, and the support the fanciers gave the management last year after a respite of one year, would seem to indicate that a show must be held in Boston annually. The Feather and Fancier grow more and more interesting every week and the Boston Association would be pleased to receive suggestions from any of your readers. We are looking toward the improvement of the show.—S. H. Roberts, Secretary.

About Fanciers

Mr. F. Y. Parfrey, of Richland Center, Wis., won sixteen firsts on Game and Sebright Bantams two weeks ago at the Wisconsin State Fair.

It was Mr. W. Barber, of Toronto, who won first and third on Black-red Game Bantams at the late Toronto Show. He also won the challenge cup for any color standard Game cockerel.

The Linn County Poultry Association will hold a show at Purdin, Miss., December 5 to 9, J. T. Hill, secretary. The boys in that locality are built along the lines of success. Look out for them.

BROWN'S BUDGET

It is almost as good a card for a breeder to send his fowls to a show and lose as to win. It shows he is willing to take his chances in strong competition. There is sometimes so little difference in the looks of winners and fowls that receive no award that it is a good "ad" to have birds in the show anyway.

Keep a flock busy most of the time at all seasons. A lot of idle fowls becomes quarrelsome, develop bad habits, such as feather plucking, comb picking, etc. It is the nature of hens to be searching for food most of the time, and the exercise keeps them in health and allows them to properly balance their rations.

September is the entering wedge to early winter conditions. The cool nights are the forerunners of the colder weather which is to follow. Are you properly prepared for these things? Are all the needed repairs attended to? Delays will surely be dangerous from now on. Always be just a little ahead with the requirements of the changing seasons.

Yes, it's "a good time to buy pure-bred fowls in the fall." Many breeders sell their breeding stock at a much lower price than they would in the spring. The young stock coming on necessitates making room, etc.

"What is the best tonic for a flock of hens to make them lay?" asks a writer. Good care, clean houses, good grass runs, a variety of food, plenty of pure water frequently replenished, and drinking vessels kept strictly clean, are the requisites to make hens lay. These essentials observed with a healthy "flock of hens" will keep them in a thriving, profitable condition. The man who is askinng about "tonics" is advertising the fact that his methods are at fault.

No matter how good the breed, bad conditions and neglect will cause ruin. Business methods must be followed. Every trouble experienced in the poultry yard results from a direct cause, and the most speedy and certain cure is generally to remove the cause.

The man who loves poultry raising is always considerate of his flock. He constantly strives to add to their comfort. Little things soon form an endless chain of importance in poultry raising. It is the observance of the little things that make the big ones sure.

Now the thrifty farmer's wife, who has been carefully saving all the double-yolked eggs to get a dozen together will have opportuninty to take them to the county fair and compete for the dozen largest eggs. Such eggs are not regular "go-bys" of the respective breeds as city people imagine and a good many do really think Mrs. Seriberthey Browne's Leghorn eggs at the fair average larger than any other breed, "'cause she won the premium on 'em."

Did you ever notice that the women who exhibit chicks at the fall fairs always have them in the very pink of condition? It almost seems that I am able to tell when I come across an exhibit owned by a woman. The chicks are sure to be hearty, clean, very tame, and with a "clean bill of health." Man hasn't the patience to wrestle with all the little essentials that are such important factors in the successful combination of poultry keeping. The women make these essentials a veritable labor of love. It's their nature.

The display of poultry at the Baltimore County Fair, at Timonium, September 2-9, was the best in quality for a number of years. The strongest class was White Wyandottes. Mr. Jos. Phippe was the superintendent. He had some of Ridgely's Barred Plymouth Rocks entered "for exhibition only," that were uniform in excellence and showed good careful breeding. The exhibit was held in a new poultry house, and the spick and span condition of everything made the birds show up in fine style. The house was filled. It should be about twice as large as it is.

If all the egg supply should suddenly cease what a revelation it would be of the value and importance of the hen. Think of culinary preparations that depend on eggs for their perfection, of their general use for food, for manufacturing purposes, and last but not least of the lack of poultry meat that would follow? Of course, the idea is only an "if," but a consideration of it will make you value Mrs. Hen more than ever.

The following is a true story of a bright three-year-old from Baltimore, who, for the first time this summer, visited the country. He took kindly to the chickens at once, and soon "caught on" that when a hen cackled she had laid an egg. Every time a hen advertised the fact the youngster insisted on some one "gathering" it at once. One day the old farmer was turning the grindstone, which sadly needed lubricating, and in consequence its squeaking made a noise considerably like the cackling of a hen. The youngster was soon around, earnestly looking all about the grindstone for the egg. The farmer asked him what he wanted, and he said: "The thing you're turning is a cackling, I want the egg, it's laid." This so elated a colored washerwoman near by that she plunged head first in the wash tub, upsetting it. The youngster ran in the house and said: "There's awful things out there, sometthing's cackling hard and no egg, and a woman's had a fit and fall'd in the tub."

The new Standard doesn't disqualify a fine white bird for a few flecks of off color gray tips on plumage. It is no indication of impurity and throwing good specimens for such a thing is absurd. The new Standard affords the beginner a chance to learn something, both by the illustrations and the text. No poultry breeder can afford to be without a copy. There will be a great demand for it.

NEW YORK STATE FAIR LIST OF AWARDS

Plymouth Rocks

BARRED: Pen old 1, pen young 1, ck 3, hens 1, 3, ckls 1, 2, pul 3, Gardner & Dunning; pen old 2, ck 1, Exmoor Poultry Farms; pen old 3, pen young 3, hen 2, W. E. Gilbert; pen young 2, ckl 3, pul 2, L. J. Bundy & Son; ck 2, F. G. Bean. Gedney Farm Poultry Yards

High-Class S. C. BLACK MINORCAS, WHITE WYANDOTTES and S. C. BUFF ORPINGTONS :: :: :: ::

We have a large number of very fine S. C. Buff Orpington Cockerels for sale. Bred in the purple and of correct type and color. Also a few Black Minorcas. Our stock is the best that time, money and skill can produce and we guarantee satisfaction to every customer

Eggs for Hatching, $3.00 per 13; $5.00 per 26.

FRANK W. GAYLOR, Mgr. - Box J, - White Plains, N. Y.

EGGS BY THE BUSHEL

If you want bushels of **Eggs** this Fall and Winter when you can get the highest prices for them, feed the hens some of our well-known **Egg-Producer,**

Banner Egg Food and Tonic

This makes the pullets and hens lay when everything else fails. Thousands of our customers will tell you the same thing.

During the month of **November** we will have our

Thirteenth Annual Sale of

BANNER EGG FOOD AND TONIC

At the special low price of 1-lb. box **15c.** If sent by mail, 16c extra for each box to pay postage.

Seven 1-lb. boxes $1.00 via express from New York.

Remember, this is for one month only, and that is **November.**

The regular price is 1-lb. box, **25c;** 5 boxes, **$1.00.**

At this special price, positively no orders filled before **November 1,** nor after **November 30.**

Now is the time to send your season's orders and reap the benefits. **A Special Circular** on **Feeding for Eggs** furnished **free** to everybody. Send for one. We sell all kinds of **Poultry and Pet Stock Supplies** and issue the most complete catalogue published.

EXCELSIOR WIRE & POULTRY SUPPLY CO., Dept. N,

26 and 28 Vesey Street **New York City**

The American Fancier

Published on the first, second and third Saturdays of months in which four Saturdays occur; and on the first, second, third and fourth Saturdays in which five Saturdays occur.

Editorial Gossip

When this issue of The Fancier reaches our readers Hagerstown will be in full blast. We are informed by Superintendent Betts, of the poultry department of Hagerstown, that they have the largest entry up to date of any year in the history of the fair, not only in poultry, but in all the classes. And it looks as though there will be a large attendance at the adjourned meeting of the American Poultry Association during the week of the fair.

There never has been such an abundance of high quality as has been shown in the poultry departments of the fall fairs. Since the opening of Courtland in August, up to the present time, there has been from three to five large fairs throughout the eastern country, and equally as many throughout the west, at which large numbers of standard-bred fowls have been shown. The Ohio State Fair display was beyond anything heretofore, as was Indianapolis, Syracuse, Allentown, Trenton and Poughkeepsie.

At Allentown was shown in the open class and in two display pens some new variety of Silver-penciled Plymouth Rocks that in quality of color and marking are equal, if not in advance, of any Silver-penciled Wyandottes yet shown. If this quality of size, color and marking can be perpetuated in this variety, they most certainly will become very popular.

The editor of Poultry seems to be very decided in what he has to say at the time he says it. In the last issue of the paper he is much stronger, if possible, in favor of a life tenure of office for the Secretary than he was opposed to the same last winter at the Pittsburg meeting. There is a saying in this section of the country that seems to fit the case, and that is, "If your coat don't suit you alter it." Editor Purvis must have joined the class of artists usually programed for lightning changes.

A few papers seem to take more than usual delight in going after Editor Trafford, who seems to have favored New York for the meeting of the association. Editor Trafford is a native of New York State, and would be a very poor son of the Empire State if he were not in favor of her. He also proves himself to be a diplomat when he quickly accepts the situation and cries, "The king is dead: long live the king!" in favor of the meeting at Cincinnati. The matter has been settled, yet in all fairness every member that voted knows way down in his heart that the 1906 meeting should have gone to New York City. But there seems to have been a train of circumstances that was used by the western politicians, and once more politics ruled the vote. Editor Purvis speaks strongly of clearing politics from the management. Such statements usually come as an afterthought and the members begin to regret the result.

There is beginning to be such a number of cross-bred pigeons used for growing squabs that a new dictionary of names must be established to meet all requirements. One of the best-established squab lofts that we know in the country use Homers, colored and white, divided in separate lofts; Runt and Hen pigeons in separate lofts; crosses of Homers and Runts and Homer and Hen pigeons. The Hen pigeon is the Florentine Runt. All of these several kinds are kept in this squab-producing plant, where they had the past year about four thousand pairs in all. The owner of the plant informed us recently that he would increase his plant to five or six thousand pairs of breeding pigeons.

This same person informs us that the most profitable branches of poultry culture is broiler ducks, eggs for market, and squabs, in the order named. The feeding of broiler chickens and market poultry is not so profitable as are the other three, but is necessary to dispose of the surplus stock of poultry and young cockerels. The best method by which to gain a profit is to yard-feed or crate-feed all you send to market. The stuffing machine has never been used at the plant mentioned.

In conversation with the manager of a duck farm a short time ago we were informed that he had gathered sufficient eggs from his Pekin ducks to fill an incubator the 19th day of September. This, he said, was the earliest he was ever able to open a campaign for producing broiler ducks. Speaking with him relative to the egg production of water-fowls brought to the attention of the world through the recent duck egg-laying contest in Australia, he replied that there were two things very largely against an early, continuous and large egg production from Pekin ducks used for producing broilers in this country. These are the excessive feeding for size and weight, the selection of the largest for breeders and the overpowering influence that the market demands have created.

The egg-producing ducks of Australia, the Indian Runner, and the new Buff Orpington Ducks have been bred for egg production, and not for heavy table ducks. The size of the egg produced by these two varieties is not so large on the average as the average size of the cultivated Pekin duck. If the same skill could be given to the production of a strain of Pekin ducks for laying that has been given to producing Pekin ducks for market we can not imagine what might be the result. The Pekin duck is naturally a good egg producer. If bred and selected entirely for the production of eggs it might become a most profitable industry. Bakers in many localities prefer duck to chicken eggs for baking. Ducks are more healthy and easily raised than are the chickens. They can be housed and cared for more cheaply. Might it not be possible that it would pay the duck raisers of this country to consider the question of duck eggs for market and produce a strain of heavy-laying ducks with that purpose in view?

We questioned one of the largest broiler-duck producers as to the average size of the broiler ducks as he sends them to market. "They range," said he, "from nine and one-half to twelve pounds per pair. A few pairs, spreading over the period of five or six years, have been grown that averaged about seven pounds apiece. These, however, are an exception to the rule—few and far between. We know that it is often stated as an inducement for some purpose or other, that broiler ducklings are a usual product at from mourteen to sixteen pounds to the pair. So far we have never seen a broiler duck that weighed over six pounds." The most successful handlers of high-quality dressed poultry in the New York market smiled when asked if they had ever had any heavy-weight ducklings. Their reply was, "We have heard of them, but like Aladdin's lamp, we expect to continue to hear of them, but never to see them. Nine to ten pounds is the usual average per pair. A few go over these weights, but they are not even prevalent enough to be calculated upon."

The summing up of these several problems of market poultry is an object lesson worthy of consideration. The growing of broiler ducks has always been profitable to those who thoroughly understand the business and continue in it long enough to overcome the first losses. Eggs for market become more popular and profitable every year. The growing of squabs is quite profitable to those thoroughly well equipped and conversant in the handling and marketing of same. It has been equally unprofitable and disastrous to those who did not understand the means and methods necessary for a profitable handling of the breeding stock. Poultry culture along all its lines is a business that must be thoroughly well understood, carefully and economically handled, and never neglected in the least, for all of these are absolute necessities to prevent loss and to make it possible to have a profit.

One of the papers ranking with those of the largest circulation in this country is the Womans Farm Journal of St. Louis, Mo. We have visited the publishing plant of this journal. We have never seen anything to surpass it in appointment. In this journal of wide circulation is maintained a department for poultry. In their columns of the August issue they set forth the importance of careful attention to the poultry during the heated term. The points made are as follows: "Too much care and attention can not possibly be given to the comfort of the poultry during the heated term. During that period permit the hens to rest from egg production. While it is natural for the hens to lay during the early spring and summer months, at the same time they should not be urged or kept continually producing a large number of eggs during this period. Guard against the dangers of bowel trouble during the heated term. When shipping poultry at this time, furnish them all the comforts possible to have in the shipping box." It is quite pleasing to notice that a journal of this importance devotes so large a portion of their reading matter to the care of the great poultry interest.

Farm and Home states that poultry keepers can always be picked out in a crowd; that they have a "pay-as-you-go" expression. We presume that the editor of Farm and Home means that they have the ready cash always at hand, so readily realized from poultry products. This is true. The money-making or ready money-producing problem of the future will be poultry growing. The increased value of their products is most enticing, the possibilities being so much greater than was ever thought of before. Yes, the poultrymen are a "pay-as-you-go" fraternity.

In the August issue of The Feather we published the new standard of the California Runt breeders. About that breed of pigeons we had our say. We find in September 15th's issue of The Pigeon News an answer to our article, which contents itself chiefly in slurring us because they claim that we are Pouter breeders and do not know anything else. The balance of the article is self-praise and exaltation of themselves and the members of the American Runt Club. This article is not signed. Why, we do not know, but we would like to have the writer answer our statements through our columns. We would ask him where the feathers came from on the shanks of the Runts, and whether they naturally belong there? Also, if he does not think that he is playing the boy when he says that it is "Eastern jealousy against western breeders." Oh, my! Has the California crowd caught that same infection and wrapped themselves in the cloak of self-aggrandizement while they cry "jealousy" to their eastern brethren?

The following is from Poultry, which says:

"The Feather is quite welcome to the use of that engraving of the winning pen of the Australian laying competition. We willingly would have loaned our contemporary the original photograph from which to make an engraving. It would have made a better appearance than the reengraved picture which was used. Of course the matter of omitting credit to Poultry was an oversight."

No, friend Purvis, if you had been as clever as you are kind and obliging you would have noticed that your illustration was a little different from ours, which came from The Australian Hen with due credit to that publication. Perhaps if we had seen yours first it might have saved Artist Graham some trouble in retouching. Look out when you intimate plagiarism! A glance in the mirror often convicts.

The annual fair of the Dutchess County Agricultural Society held at Poughkeepsie, N. Y., last week eclipsed all previous records in the poultry department. Eight hundred more entries than at shows held in past years means something out of the ordinary. As a county fair in the Empire State old Dutchess County leads by a safe margin all competitors as far as quality and quantity of exhibits and up-to-date management are concerned. The Empire Cooping Company, as in the past, did the caging of the birds to the complete satisfaction of every one, the great and only "Marsh" Wemple being in charge of that end of the business. The veteran superintendent, T. C. Van Wyck, and his able assistants looked after the birds and exhibitors in the most approved fashion. It was necessary to use two big tents in addition to the regular poultry building in order to accommodate all the birds. The classification was excellent, which made the work of the judges a pleasure instead of a burden. F. B. Zimmer, James Glasgow and J. H. Drevenstedt placed the ribbons and it took them two days to get all the awards up. The competition was very keen in the popular varieties and there was more or less strenuous kicking indulged in by a few exhibitors. But as a rule the majority of the boys were satisfied and took their medicine in faultless style.

The American classes were well represented. Barred Rocks were unusually strong in quality with such well-known exhibitors as Ham, Hayner and Bunk fighting for the honors. Several New York concerns were in the classes. First hen was a grand bird in shape, fine in color, nicely barred, good comb and very good in color of legs and beak. Second hen, an old winner, was not in the best condition but strongly barred and good in color. First cock was very even in surface color, narrowly and evenly barred in hackle and saddle, good bows, breast and tail; the second, another fine bird, was a little darker in color and not quite as narrow in barring but better in shape. The first cockerel was a little beauty in color and barring, the real blue kind with close, narrow barring in neck and back. He should make a very hard one to beat at any show when fully developed later on. The second was a larger bird, good shape and color, but not as evenly or as narnowly barred as the winner. The first pullet was a very even bird in color, splendid parallel barring in every section, one of the best we have seen in some time; second was a nice, large bird, fine in type, bright in color; was not as regularly or evenly barred as winner. First pen of old was made up of an even lot of high-class Rocks with first and second pen of chicks up to high-water mark in quality; as good as can be found at the big winter shows.

The Buff Rocks at Poughkeepsie were equal to the best in quality, the first cock, hen, cockerel and pullet being stars in evenness of surface color with fine under color to match. It was a really fine showing of Buffs. White Rocks were not as numerous as at past shows but there was enough quality in some of the winners to make up for lack of numbers.

Wyandottes averaged strong in quality as a rule, but we have seen larger classes of Whites. The latter contained some fine birds, notably first hen, first and second pullet and first cock. Buffs were good, especially first cock and hen, both being very even in color and good in type. Silvers were full of quality all along the line. Some very good Partridge, a few fine Silver-penciled and a number of good Black and Columbian rounded out the "Wy" alley.

Rhode Island Reds were too numerous to mention, both single-combed and rose-combed varieties coming out in big numbers with more quality than we have seen at any show this season. The winners in all classes are deserving of unstinted praise as far as quality is concerned.

One of the surprises at Poughkeepsie was the Light Brahma exhibit. It was the largest we have seen in many years at a big fall fair and the quality was "all to the good" in the winners. We were particularly struck with the first and second hens, both fine in color, great in size and excellent in type, a pair of old dames that reminded one of the Light Brahmas when they were the leaders in poultrydom. The quality of the cock birds was very good, but the condition of some was a severe handicap in the race for the honors. The youngsters showed up strong in pullets and fairly so in cockerels. It was too early in the season to see them at their best.

Dark Brahmas made a good showing. Cochins averaged fair in numbers and were good in quality. Langshans were weak in numbers but strong in quality. As a rule the Asiatic class was better than at previous shows.

The Mediterranean classes, notably White Leghorns, Minorcas and Anconas were strong all along the line with competition enough to make even that old veteran judge, F. B. Zimmer, ponder over the whys and wherefores when placing the ribbons. It was especially strenuous in the Minorca alley—but that is another story. "Zim" will write all about it later on.

Hamburgs, Polish and French had their usual quota of good birds, some really fine birds being caged in the Hamburg classes and an exceptionally fine Silver Polish hen making the Polanders look unusually fine. Dorkings were about the same as at most good fall shows. Games had but small classes. Game Bantams were full of quality with many crack-a-jacks in line. Ornamental Bantams showed up strong in most classes as far as quality was concerned. Turkeys, ducks and geese were about the same as usually seen at fall fairs excepting Pekin ducks which were above the limit in numbers and quality.

There were many visiting fanciers present at Poughkeepsie and to judge by the talk in the aisles this fall show is getting to be a regular Madison Square Garden function. It takes a mighty good bird to win in this old burg on the American Rhine. Should it ever become possible for the Dutchess County Agricultural Society to gain complete possession of the grounds where the fair is held and erect the buildings for big poultry and kennel exhibits, we are of the opinion that the biggest chicken and canine shows in the Empire State will be annual fixtures.

Judge Daniel P. Shove, Fall River, Mass., accompanied by his wife, spent several days at Poughkeepsie. He was greatly interested in the Rhode Island Reds and had plenty of fine birds to look at and admire. Mr. Shove is going to Hagerstown next week to attend the A. P. A. meeting and see what the American Red contingent is up to.

With the two Orrs, Purvis, Shove and several others at Hagerstown, there is likely to be a little Pittsburg A. P. A. smoke in the air. The American Red dies hard.

Senator D. A. Nichols took a spin on his new green auto and spent a day with old friends at Poughkeepsie. The Hon. David graduated some thirty years ago from the famous Eastman Business College, located in the above-mentioned city, and has made arrangements to have his son take a course there during the coming year. The senator is still fond of chickens and spent much time looking the Silver Sebrights over. He is also the author of a new song entitled "Forty-nine." The song is brief but the refrain long.

The Great Eastern Poultry and Pet Stock Show is the title of a new function to be held at the Grand Central Palace, Forty-second street and Lexington avenue, New York City, November 13 to 17, 1905. This exhibition will be conducted by Dr. Paul Kyle, president, and Mr. C. E. Gauss, secretary. Both these gentlemen were in charge of the Herald Square Show held last year at Macys, New York. The plans for the coming show have been carefully laid, so we are informed, and many new features will be introduced. Further particulars will be announced in our next issue.

Mr. T. Farrer Rockham, superintendent of the Newark Show, informs us that the

Gallery of Fame

HENRY HALES

AMONG the fanciers of this country there is none better known or more respected than Mr. Henry Hales, of Ridgewood, N. J. He has been a lifelong breeder of the English Dorking and a true fancier in his love for Japanese Bantams. Mr. Hales belongs to the old school of poultry fanciers and believes in always having the best, in respecting the rights of others, and in gaining supremacy through quality alone.

tenth annual exhibition will be held at Bambergers Auditorium, Newark, N. J., January 29 to February 3, 1906, and that it will be more liberal and more advanced than ever; in fact, it will be the "best." The show held last year was the best conducted, from a financial standpoint, of any function of a similar nature ever held in this country.

Mr. John Rumbold, secretary of the American Light Brahma Club, informs us that the John L. Cost memorial cards, which go only to members winning prizes on Light Brahmas at the great Hagerstown Show, have been received by him and are very fine and should be greatly appreciated by those fortunate enough to win one or more. One championship ribbon for the best Light Brahma in the show will also be offered.

The famous winter show of Canada, the "Ontario," will be held at Guelph, December 11 to 15. The cream of Canadian birds will be found there in silk attire and a ribbon won is prized as highly as one won at Madison Square, New York; Boston or Chicago. The abovementioned exhibition is conducted by the Ontario Department of Agriculture in connection with the Ontario Poultry Association.

We regret to learn of the death of Mr. F. L. Mattison, Shaftsbury, Vt. Mr. Mattison was not only one of the leading fanciers of the United States in years past, but a leading business man in his state. He served the latter and his party well as senator some years ago. He was one of the first Silver Wyandotte fanciers to send to England and get the English type of Silvers to blend with the American brand of the same variety. He belonged to the old school of fanciers, fast dying out but never to be forgotten.

Eleven single birds are entered at the Danbury Fair held this week. This is a fine record as only single birds are shown and only one bird allowed in a coop. It is a fancier's show in the strictest sense of the term. Mr. F. Bowman is and has been the secretary of the poultry department for years and he is without a peer in his line. Mr. Brundage is, of course, superintendent, and that means everything will be in apple pie order. The Oslerized pair of judges, Hon. D. A. Nichols and J. H. Drevenstedt, officiated as adjudicators as at past shows held at Danbury.

Members of associations through the South have issued a call for all those interested in a solid organization to meet at Piedmont Hotel, Atlanta, Ga., during the week of the Atlanta Show. The meeting is called for December 18 next. All who possibly can should be present.

The New York State Breeders Association will hold a winter fair at Syracuse, December 9 to 21 next. They offer a fine list of prizes for dressed poultry. These are donated by American Agriculturist of New York City.

More broiler ducks than ever before have been grown and sold this year.

Squabs are raised in one month, bring big prices. Money makers for poultrymen, farmers, women. Send for our **Free Book** and learn this immensely rich industry. 83
